

## Table of Contents

Foreword .....	i
Sponsors.....	ii
Table of contents .....	iii

### Clinical Studies: Anatomical and Physiological Models

Secondary flows in the cardiovascular system: The pivotal role of phase separation <i>Schmid-Schönbein, H.</i> .....	1
Hemodynamics and the afferent artery of arteriovenous fistulae <i>Stehbens W.E., Jones, G. T.</i> .....	5
Special fluid dynamic profiles in different models of arteriovenous fistulas: Consequences for patients on dialysis <i>Pflugbeil, G., Tröster, J., Kurz, P., Liepsch, D., Maurer, P.C.</i> .....	11
Determination of pulse wave velocity in arteries with pressure tip catheters leads to incorrect results <i>Schima, H., Raderer, F., Tsangaris, S., Siegl, H., Trubel, W., Moritz W.</i> .....	15
Angiography method for fluid mechanical studies <i>Smedby, Ö.</i> .....	21
The role of geometry and distensibility of the infra-renal and aorto-iliac bifurcations in arterial disease <i>Roach, M.R. Fung, K., MacLean, N.F.</i> .....	27
Shear rate and thrombin transport <i>Affeld, K., Gadischke, J.</i> .....	35

### Physiological and Clinical Studies

Biomechanics and the transport function of veins <i>Kenner, T.</i> .....	41
Validation and use of an optical technique for the measurements of pulse wave velocity in conduit arteries <i>Bonner, S.E., Dawson, R., Martyn, C.N., Greenwald, S.E.</i> .....	43
Endothelial and vein wall response to turbulent shear stress from arteriovenous anastomoses (AVAs) <i>Schalin, L., Moberger, G.</i> .....	53
In vitro blood flow visualization in vein models with different size clots trapped in a classical "Opctetra" and a symmetrical "Antheor" caval filter <i>Morin, G., Perrault, R., Doffin, J., Fourgeau P.</i> .....	67
Is reflux necessary for closing a venous valve? <i>Qui, Y., Wang, S.-K., Hwang, N.H.C.</i> .....	73
Mechanoluminescence of blood flow <i>Orel, V.E.</i> .....	83
Noninvasive estimation of left ventricular max (dP/dt) from aortic flow acceleration and pulse wave velocity <i>Sugawara, M., Senda S., Masugata H., Nishiya T., Matsuo H.</i> .....	89
Heart rate influence on arterial compliance using pressure contour wave analysis <i>Segers, P., Verdonck, P., Verhoeven R., Duprez D., Debuyzere, M.</i> .....	91

Effects of cardiac contraction on the microvessels in the interventricular system <i>Pfeffer, M., Goto, M., Yada T., Tachibana, H., Hiramatsu, O., Kajiya F.</i> .....	
CT analysis of the role of iliac distensibility in balloon angioplasty <i>MacLean, N.F., Boyd, C.J., Sherebrin, M.H., Rankin R.N., Fenster A., Roach, M.R.</i> .....	
Coronary bypass monitoring with a new method for the assessment of bypass hemodynamic-methods and clinical experiences <i>Schmidt, P., Lass, M., Brucher. R., Paulat, K. Uetz U. Helferich., D., Frenkenberger H., Hannekum A.</i> .....	
Blood pressure and velocity relation in tissue <i>Wang, W.K., Hsu T.L., Chen H.L.</i> .....	
Surface properties of airway mucus exposed to acid aerosol <i>Lee, M.M., Green, F.H.Y., Zhang, Y., Schürch, S.</i> .....	

## MRI Studies

Magnetic resonance (MR) angiography of the coronary arteries <i>Scheidegger, M.B., Vassalli, G., Hess, O.M., Boesiger, P.</i> .....	1 <sub>1</sub>
<i>In vivo</i> magnetic resonance blood flow measurements in vessels with complex flow patterns <i>Botnar, R., Scheidegger, M.B., Meier D., Boesiger, P.</i> .....	1 <sub>1</sub>
Magnetic resonance angiography of the human carotid bulb 1. Flow visualization in human arterial castings. <i>Kerber, C.W., Buxton, R.B, Knox, K.</i> .....	1 <sub>1</sub>
Magnetic resonance angiography of the human carotid bulb 2. Experimental evaluation of MR accuracy and artifacts <i>Buxton, R.B, Frank, L.R., Kerber C.W.</i> .....	1 <sub>1</sub>
New methods for the evaluation of pressure and flow patterns in the coronary arteries and aortic root <i>Einav, S., Zaretsky, U.</i> .....	15 <sub>15</sub>
Magnetic resonance: a new method for studying the hemodynamics of artificial heart valves? A comparison with LDA <i>Walker, P.G., Oyre S., Pedersen E.M., Fontaine, A.A., Yoganathan A.P.</i> .....	16 <sub>16</sub>
Vascular imaging: Current status and problems <i>Hübsch, P.</i> .....	17 <sub>17</sub>

## Curvature and Branching Studies

Quantitative morphology of arterial casts <i>Matsuo, T., Okeda, R.</i> .....	18 <sub>18i</sub>
Contribution of flow choking to dynamic stenosis resistance <i>Ku, D.N., Powell, B.E., Downing, J.M.</i> .....	18 <sub>18w</sub>
Dependence of fibrin thrombosis formation in an arterial branching model on shear and residence time <i>Reininger, A.J., Reininger, C.B., Heinzmann, W., Wurzinger, L.J.</i> .....	197 <sub>97</sub>
Secondary flow augmentation in the diastolic phase of physiologically intermittent flow in a curved tube <i>Konno, T., Satoh, Y., Tanishita, K.</i> .....	205 <sub>05</sub>

Analysis of error in arterial propagation coefficient measurement Bertram, C.D., She, J.....	271
Shear stress and exposure times within severely stenosed coronary and carotid arteries Rittgers, S.E., Boreda R., Fatemi, R.S.....	225
Potential for hemodynamic stimulation of platelets at critical coronary stenoses Rittgers, S.E., Acharya, S., Mugler, D.H.....	237
Analysis of blood flow field in glass capillaries and <i>in vivo</i> microvessels by axial tomographic and image velocimetry techniques Singh, M., Prakash B.....	239
Experimental analysis of Newtonian and non-Newtonian fluids pulsatile flow through elastic Y models Mijovic, B., Liepsch, D.....	255

## Collapsible Tubes

Mathematical modeling for the unsteady flow separation through a collapsible channel Matsumoto, T., Matsuzaki, Y.....	261
Towards a rational description of flow in collapsible tubes. Pedley, T.J., Lowe, T.W., Luo, C.Y., Rast, M.P.....	271
On the collapse of compliant axisymmetric stenoses: conditions and nature of collapse and effects on velocity distribution Stergiopoulos, N., Moore J.E., Golay X., Ku D.N., Meister J.-J.....	273
Measurement of oscillatory flow pressure gradient in an elastic tube Cohen, M.I., Wang, D.M. Tarbell, J.M.....	283

## Heart and Heart Valve Studies

Hydrodynamic characteristics of a new stentless mitral valve allograft: <i>in vitro</i> results Vetter, H.O., Yoganathan A.P., Fontaine A., Erhorn, A., Reichart B.....	287
<i>In vitro</i> study of occluder cinematics of the SJM aortic heart valve prostheses in pulsatile flow Brücker, C., Köhler, J.....	295
<i>In vitro</i> steady flow 3-D turbulence structure distal to normal and stenosed aortic valve prostheses Fontaine, A.A., Walker P.G., Yoganathan, A.P.....	307
<i>In vitro</i> steady leakage jet formation of technical heart valves prostheses- a photo-video optical and colour Doppler study Köhler, J., Wirtz, R., Fehske, W.....	315
Influence of rheological behavior of model fluids on the <i>in-vitro</i> testing of artificial heart valves Pohl, M., Wendt, M.O., Werner, S., Koch, B., Lerche, D., Affeld, K., Schichl, K.....	324
<i>In vitro</i> evaluation of the hydraulic opening area of heart valve prostheses- the influence of test fluid rheology and valve type Wendt, M.O., Werner, S. Kühnei R., Pohl M., Koch B., Lerche D.....	325

Prosthetic heart valve cavitation in blood <i>Garrison, L.A., Lamson, T.C. Deutsch S., Geselowitz D.B., Tarbell, J.M.</i> .....	3
<i>In-vitro</i> imaging of normal and thrombosed bileaflet valves: mechanics of impaired leaflet opening. <i>Rambod, E., Gharib, M., Einav, S.</i> .....	3
Hydrodynamic aspects of artificial heart valves and total artificial heart replacement <i>Klimes, F.</i> .....	3
The influence of rheological components on blood flow in vascular prostheses <i>Yurechko, V.N., Shtengold, E.Sh., Ilminsky, V.N., Filin, E.M., Frey, R.</i> .....	3
Dynamic filling characteristics of the left ventricle <i>Gharib, M., Hammache, M., Rambod, E., Shiota, T., Sahn, D.</i> .....	3

## Ultrasound Studies

Slosh phenomenon of coronary arterial flow and its pathophysiological significance <i>Kajiya, F., Matsumoto, T., Yada, T., Hiramatsu, O., Kimura A., Goto, M., Ogasawara, Y., Tachibana, H., Tsujioka, K.</i> .....	3
Color-Doppler-rheography: Principles and experimental results <i>Hammentgen, R., Schmidt, H., Klapp, A., Godder, V.S., Schiffmann, J., Papenfuß, H.J., Gleichman, U.</i> .....	3
Color-Doppler-rheography: Physiological range of the fluid dynamics in large vessels <i>Hammentgen, R., Schmidt H., Schiffmann, J., Papenfuß, H.J., Gleichmann, U.</i> .....	3
Color-Doppler rheography: Monitoring of the fluid dynamics in the common carotid artery during extracorporeal circulation in open heart surgery <i>Hammentgen. R., Minami, J., Schmidt, H.J., Nirow, N., Dramburg. W., Schiffmann, J., Papenfuß, H. J., Gleichmann, U., Körfer, R.</i> .....	3
Evaluation of wall and atherosclerotic plaque motion in the carotid bifurcation using 4D ultrasound <i>Meairs, S., Hennerici, M.</i> .....	3
Dynamics of asymmetric regurgitant jets: effect on color Doppler jet areas <i>Rambod, E., Einav, S.</i> .....	3
On the use of the Womersley's theory for the computing of hemodynamical parameters from ultrasonic velocity profiles: an <i>in vivo</i> application to the case of the blood viscosity. <i>Bensalah, A., Flaud, P.</i> .....	36
Duplex sonography with color flow imaging for the assessment of hemodynamics in carotid artery disease <i>von Reutern, G.M.</i> .....	36
Analysis of LDA and ultrasound Doppler data obtained in models of carotid bifurcation with rough surface in carotid sinus <i>Kaluzynski, W., Liepsch, D.W.</i> .....	36
Doppler frequency of spectral broadening as an indicator of the severity of arterial stenoses <i>Talukder, N.K. Talukder, K.</i> .....	37

Understanding Doppler ultrasound data of mitral valve flow using lumped parameter modeling <i>Verdonck, P., Segers, P., Verhoeven, R.</i> .....	381
--	-----

## Mathematical Models

Nonlinear wave and chaos in large blood vessels <i>Bao, G.</i> .....	392
The axisymmetric haemodynamic analysis of blood flow with intra aortic balloon pumping <i>Chen, B.-F.</i> .....	393
Optimisation of blood flow measurement in large vessels <i>Ciupa, R.V., Ciupa, A.A.</i> .....	395
A mock arterial circulation via computer <i>Duros, J., Kufahl, R.H., Clark, M.E.</i> .....	399
A theoretical model for wave propagation in arteries <i>Gupta, R.S.</i> .....	411
A mathematical hypothesis for renal arterial stenosis in renal transplantation <i>Colf, L., Buscaroli, B., Mosconi, G., Guidicissi, G., De Giovanni, P., Moschella, M.R., Pallotti, A., Pallotti, G., Pettazzoni, P., Stefoni, S.</i> .....	421
Modeling of flow field around aortic artificial valves <i>Wojnarowski, J., Mirola, K.</i> .....	429

## Numerical Studies

Respiratory rhythm effects on the total cavopulmonary connection fluid dynamics <i>Dubini, G., Caprarucci, L., de Leval M.R., Pietrabissa, R., Montevescchi, F.M., Fumero, R.</i> .....	445
Pulsatile flow in aorto-coronary bypass 3-D model <i>Inzoli, F., Migliavacca, F., Mantero, S.</i> .....	455
Numerical simulation of blood flow in large vessels on massively parallel computers <i>Matsuzawa, T.</i> .....	464
Numerical simulation of mass transport in arterial systems <i>Rappitsch, G., Perktold, K.</i> .....	465
Problems in application of viscoelastic models to the numerical analysis of arterial blood flow <i>Perktold, K., Leuprecht, A., Peter R.O.</i> .....	471
The effect of moving walls on pulsating flows: relation to the coronary blood flow <i>Tsangaris, S., Rammos, K.S., Pappou Th., Koullias G., Panagopoulos, F.G.</i> .....	477
Particle flow behaviour and pressure distribution in a 3-D T-junction <i>Xu, X.Y., Collins, M.W.</i> .....	489
Flow details and fluid particle paths in model by-pass grafts <i>Henry, F.S., Hughes, P.E., How, T.V., Collins, M.W.</i> .....	497

## Endothelial Cells

Hemodynamics, the endothelium and atherosclerosis <i>Nerem, R.M.</i> .....	508
---	-----

The intracellular calcium response of single endothelial cells subjected to fluid-imposed steady and pulsatile shear stress. <i>Helmlinger, G., Berk, B.C., Nerem, R.M.</i> .....	1
The role of GPIB and GPIIb-IIIa in the adhesion and aggregation of platelets on human type VI collagen under physiological shear conditions. <i>Ross, J.M., McIntire, L.V., Moake J.L., Rand, J.H.</i> .....	5
Fluid shear stress changes the levels of expression of adhesion molecules on human umbilical vein endothelial cells <i>in vitro</i> <i>Sampath, R., Kukielka, G.L., Smith, C.W., Eskin, S. G. McIntire, L.V.</i> .....	4
The design of an apparatus for subjecting vascular endothelium to physiologic levels of both fluid shear stress and circumferential cyclic stretch <i>Suciu, A, Zhao, S. Moore, J.E. Bürki, E., Burnier, M., Brunner, H.R., Meister, J.J.</i> .....	4
Flow direction affects shape and cytoskeletal structure of cultured bovine aortic endothelial cells <i>Kataoka, N., Ujita S., Ogawa Y., Sato, M.</i> .....	5
Arterial endothelial cells align to reduce the local shear stress <i>Yamaguchi, T.</i> .....	5
Endothelial glycosaminoglycan synthesis increased by laminar shear stress <i>Mitsumata, M., Arisaka, T., Kawasumi, M., Yoshida, Y.</i> .....	5

## Flow Visualization and LDA Studies

Determination of low wall shear stress regions within ventricular assist devices using mass transfer techniques <i>Clark, C., Jin, W.</i> .....	5
Particle-Image-Velocimetry (PIV)-a tool for measuring unsteady vortical flows in models of branching vessels: Application to the confluent flow in a rigid 90°-T-junction <i>Brücker, C.</i> .....	5
Swirl in Fontan connections: flow visualization and LDA studies <i>Kim, Y.H., Fontaine, A.A., Walker, P.G., Ha, B., Lucas, C.L., Yoganathan, A.P.</i> .....	5
Experimental study of pulsatile flow in elastic model of PETP vascular graft <i>Konfrst, J., Liepsch, D.W., Weigand, K.</i> .....	5
Development of fiber optic laser Doppler velocimeter for measurements of local blood velocity <i>Ohba, K., Yoshioka K.</i> .....	5
An <i>in vitro</i> arterial preparation for acute study of endothelial permeability responses to defined shear stress conditions <i>Waliszweski, M., Fry D., Kuban B., Friedman, M.</i> .....	5
LDA measurements in anatomically distensible carotid artery models under physiological conditions. <i>Liepsch, D.W., Pflugbeil, G., Maurer, P.C, Weigand, K.</i> .....	5
Effect of secondary flow on wall shear stress through asymmetrical branch during laminar steady flow <i>Yamaguchi, R.</i> .....	6
Laser fluorescence detection of plaque <i>Unsöld, E., Ischinger, T., Pesarini, A.</i> .....	6

## Arterial Grafts-Anastomosis

Flow patterns and wall shear stress in a mildly stenosed femoral artery <i>Cavalcanti, S.</i> .....	613
Hemodynamic effects of arterial graft design: A simulation study <i>Cavalcanti, S., Gnudi, G.</i> .....	619
An <i>in vitro</i> model study of cerebral circulation in presence of carotid stenoses <i>Bossuet Ph., Cassot, F., Marc-Vergnes, J.P., Fuseri J., Rieu, R.</i> .....	627
Fluid mechanical simulation of left ventricular aneurysms <i>Merzkirch, W., Hadland, P.H.</i> .....	635
Wall shear stress and flow pattern through the anterior communicating artery model in steady flow <i>Ujiie, H., Okabe, H., Yamaguchi, R., Takakura, K.</i> .....	641
The hemodynamics of arterial prosthesis <i>Pelle, G., Radier, C., Oddou, C.</i> .....	652
New volumetric parameters and ratios in abdominal aortic aneurysms and their potential influence on indication for elective surgery <i>Cappellar, W.A., Engelmann, H., Fürst H., Blechschmidt, S., Wild, M., Lauterjung, L.</i> .....	653
Effects of compliance and diameter mismatch on the wall shear rate distribution near an end-to-end anastomosis model <i>Weston, M.W., Rhee, K., Tarbell J. M.</i> .....	657

## Rheological Studies

The effect of blood viscoelasticity on pulsatile flow in straight tubes <i>Sharp, M.</i> .....	663
Structural dynamics of red blood cell aggregates under flow <i>Chen, S., Barshtein, B., Gavish, B., Yedgar, S.</i> .....	681
Model fluids for blood, rheological and shear induced damage behavior of polymer solutions <i>Lerche, D., Koch, B., Pohl, M., Vlastos, G., Affled, K.</i> .....	682
Other methods to determine the viscosity of blood <i>Silber, G.R.</i> .....	683
Microstructure of viscous aqueous solutions <i>Barshtein, G., Almagor, A., Yedgar, S., Gavish, B.</i> .....	691
Simulation of non-Newtonian blood flow in human fetal branches with complex geometry <i>Hellevik, L.R., Irgens, F., Kiserud, T., Ytrehus, T., Eik-Nes, H.</i> .....	692
Influence of non-Newtonian blood properties on numerical flow simulation at mechanical heart valves prostheses <i>Eilers, R., Ritter, Chr., Reul, H., Rau, G.</i> .....	693
Influence of blood rheology on cancer therapy <i>Shulman, Z.P., Makhane, A. A.</i> .....	701

## Arterial Wall

A model for blood flow through a tapered tube with mild stenosis <i>Tandon, P.N., Rana, U.V.S.</i> .....	7
Models of arterial permeability dynamics <i>Friedman, M.H., Henderson, J.M., Fry D.L.</i> .....	7
Wave propagation of blood velocity and vessel diameter: influence of the wall rheology <i>Rogova, I., Bensalah, A., Flaud P., Oddou, C.</i> .....	7
Analysis of the forward and backward running waves in arteries: the role of nonlinear wall elasticity <i>Stergiopoulos, N., Pythoud, F., Meister, J.-J.</i> .....	7
Blood pressure and mechanical properties of arterial wall in aortic dissection <i>He, C.M., Roach, M.R.</i> .....	7
