Preface	v
1 Introduction	1
1.1 Why consider functional data at all?	1
1.2 The Web site	2
1.3 The case studies	2
1.4 How is functional data analysis distinctive?	14
1.5 Conclusion and bibliography	15
2 Life Course Data in Criminology	17
2.1 Criminology life course studies	17
2.1.1 Background	17
2.1.2 The life course data	18
2.2 First steps in a functional approach	19
2.2.1 Turning discrete values into a functional datum	19
2.2.2 Estimating the mean	21
2.3 Functional principal component analyses	23
2.3.1 The basic methodology	23
2.3.2 Smoothing the PCA	26
2.3.3 Smoothed PCA of the criminology data	26
2.3.4 Detailed examination of the scores	28
2.4 What have we seen?	31

2.5	How are functions stored and processed?	33
2.5.1	Basis expansions	33
2.5.2	Fitting basis coefficients to the observed data	35
2.5.3	Smoothing the sample mean function	36
2.5.4	Calculations for smoothed functional PCA	37
2.6	Cross-validation for estimating the mean	38
2.7	Notes and bibliography	40
3	The Nondurable Goods Index	41
3.1	Introduction	41
3.2	Transformation and smoothing	43
3.3	Phase-plane plots	44
3.4	The nondurable goods cycles	47
3.5	What have we seen?	54
3.6	Smoothing data for phase-plane plots	55
3.6.1	Fourth derivative roughness penalties	55
3.6.2	Choosing the smoothing parameter	55
4	Bone Shapes from a Paleopathology Study	57
4.1	Archaeology and arthritis	57
4.2	Data capture	58
4.3	How are the shapes parameterized?	59
4.4	A functional principal components analysis	61
4.4.1	Procrustes rotation and PCA calculation	61
4.4.2	Visualizing the components of shape variability	61
4.5	Varimax rotation of the principal components	63
4.6	Bone shapes and arthritis: Clinical relationship?	65
4.7	What have we seen?	66
4.8	Notes and bibliography	66
5	Modeling Reaction-Time Distributions	69
5.1	Introduction	69
5.2	Nonparametric modeling of density functions	71
5.3	Estimating density and individual differences	73
5.4	Exploring variation across subjects with PCA	76
5.5	What have we seen?	79
5.6	Technical details	80
6	Zooming in on Human Growth	83
6.1	Introduction	83
6.2	Height measurements at three scales	84
6.3	Velocity and acceleration	86
6.4	An equation for growth	89
6.5	Timing or phase variation in growth	91
6.6	Amplitude and phase variation in growth	93

6.7	What we have seen?	96
6.8	Notes and further issues	97
6.8.1	Bibliography	97
6.8.2	The growth data	98
6.8.3	Estimating a smooth monotone curve to fit data	98
7	Time Warping Handwriting and Weather Records	101
7.1	Introduction	101
7.2	Formulating the registration problem	102
7.3	Registering the printing data	104
7.4	Registering the weather data	105
7.5	What have we seen?	110
7.6	Notes and references	110
7.6.1	Continuous registration	110
7.6.2	Estimation of the warping function	113
8	How Do Bone Shapes Indicate Arthritis?	115
8.1	Introduction	115
8.2	Analyzing shapes without landmarks	116
8.3	Investigating shape variation	120
8.3.1	Looking at means alone	120
8.3.2	Principal components analysis	120
8.4	The shape of arthritic bones	123
8.4.1	Linear discriminant analysis	123
8.4.2	Regularizing the discriminant analysis	125
8.4.3	Why not just look at the group means?	127
8.5	What have we seen?	128
8.6	Notes and further issues	128
8.6.1	Bibliography	128
8.6.2	Why is regularization necessary?	129
8.6.3	Cross-validation in classification problems	130
9	Functional Models for Test Items	131
9.1	Introduction	131
9.2	The ability space curve	132
9.3	Estimating item response functions	135
9.4	PCA of log odds-ratio functions	136
9.5	Do women and men perform differently on this test?	138
9.6	A nonlatent trait: Arc length	140
9.7	What have we seen?	143
9.8	Notes and bibliography	143
10	Predicting Lip Acceleration from Electromyography	145
10.1	The neural control of speech	145
10.2	The lip and EMG curves	147

10.3	The linear model for the data	148
10.4	The estimated regression function	150
10.5	How far back should the historical model go?	152
10.6	What have we seen?	155
10.7	Notes and bibliography	155
11	The Dynamics of Handwriting Printed Characters	157
11.1	Recording handwriting in real time	157
11.2	An introduction to dynamic models	158
11.3	One subject's printing data	160
11.4	A differential equation for handwriting	162
11.5	Assessing the fit of the equation	165
11.6	Classifying writers by using their dynamic equations . .	166
11.7	What have we seen?	170
12	A Differential Equation for Juggling	171
12.1	Introduction	171
12.2	The data and preliminary analyses	172
12.3	Features in the average cycle	173
12.4	The linear differential equation	176
12.5	What have we seen?	180
12.6	Notes and references	181
	References	183
	Index	187
