
Contents

Preface.....	xi
1 Synthesis, Processing, and Application of Nanostructures.....	1
1.1 Introduction to Nanotechnology	1
1.2 History of Nanotechnology	2
1.3 What Is a Nanomaterial?.....	3
1.4 Properties of Nanostructured Materials	6
1.4.1 Physical Properties	9
1.4.1.1 Diffusion Coefficient.....	9
1.4.1.2 Thermal Expansion Coefficient.....	12
1.4.1.3 Electrical Resistance.....	14
1.4.1.4 Solubility of Alloy Elements	15
1.4.1.5 Magnetic Properties.....	15
1.4.1.6 Corrosion Resistance	17
1.4.1.7 Hydrogen Capacitance Properties	18
1.4.2 Mechanical Properties	18
1.4.2.1 Elastic Properties.....	19
1.4.2.2 Plastic Properties.....	20
1.4.2.3 Superplasticity	27
1.5 Thermal Stability of Nanostructures	31
1.6 Nanotechnology and Future Perspectives	36
1.7 Some Applications of Nanostructures.....	38
1.7.1 Nanoelectronic and Molecular Electronic.....	38
1.7.2 Nanorobots	38
1.7.3 Biological Applications	38
1.7.4 Catalytic Applications.....	39
References	39
2 Classification of Two-Dimensional Nanostructures.....	51
2.1 Introduction.....	51
2.2 Various Methods for Production of Nanostructures.....	51
2.2.1 Producing Nanoparticles by the Sol-Gel Process.....	52
2.2.2 Production of Nanoparticles by the Chemical Deposition Method.....	52
2.2.3 Production of Nanoparticles by the Hydrothermal Method ...	53
2.2.4 Production of Nanoparticles by the Pyrolysis Method....	53
2.2.5 Production of Nanoparticles by Chemical Vapor Deposition (CVD).....	54
2.2.6 Solid-State Processes	54
2.2.7 Advanced Methods	54

2.3	Physical and Chemical Analysis of Nanoparticles	55
2.3.1	X-Ray Diffraction (XRD)	55
2.3.2	Scanning Electron Microscopy (SEM)	56
2.3.3	Transmission Electron Microscopy (TEM).....	56
2.3.4	Optical Spectrometry	56
2.3.5	Ultraviolet (UV)-Visible Spectroscopy	57
2.3.6	Fluorescence	57
2.3.7	Fourier Transform Infrared Spectrometry (FTIR)	57
2.4	Different Forms of Growth.....	58
2.5	Relation between Growth and Energy Level.....	59
2.6	Overaturation Effect on Growth.....	60
2.7	Quantitative Description of Initial Stages of Film Growth.....	62
2.7.1	Volmer–Weber Theory	62
2.7.2	Three-Dimensional (3D) Island Growth.....	62
2.7.3	Two-Dimensional (2D) Film Growth	63
2.8	Kinetic Theory of Growth.....	64
2.9	Orientation of Thin Films	67
2.10	Film Growth with a Certain Orientation.....	68
2.11	Film–Substrate Interfaces.....	69
2.11.1	Abrupt Interface (Single Layer on Single Layer)	69
2.11.2	Interface with Chemical Bond	69
2.11.3	Distributed Film–Substrate Interfaces	69
2.11.4	Semidistribution Film–Material Interface.....	70
2.11.5	Mechanical Film–Substrate Interface.....	71
	References	71
3	Characterization and Fabrication Methods of Two-Dimensional Nanostructures.....	81
3.1	Introduction	81
3.2	Silicon (Si).....	82
3.3	Dimer-Adatom-Stacking Fault (DAS) Model	83
3.4	Auger Electron Spectrometry (AES).....	84
3.5	Low-Energy Electron Diffraction (LEED) Technique	85
3.6	X-Ray Phototransmission Spectrometry.....	85
3.7	Physical Vapor Deposition (PVD) Methods	86
3.7.1	Thermal Evaporation.....	86
3.7.2	Evaporation Sources	87
3.7.2.1	Resistive Heating.....	88
3.7.2.2	Flash Evaporation.....	88
3.7.2.3	Arc Evaporation.....	89
3.7.2.4	Laser Evaporation.....	91
3.7.2.5	Application of Electron Bombardment	92
3.7.2.6	Evaporation through Radio Frequency (RF) Heating.....	93
3.7.3	Sputtering Method.....	93

3.7.3.1	Reactive and Nonreactive Processes	93
3.7.3.2	Diode Sputtering	94
3.7.3.3	RF Sputtering	94
3.7.3.4	Triode Sputtering	95
3.7.3.5	Magnetron Sputtering	96
3.7.3.6	Unbalanced Magnetron Sputtering.....	98
3.8	Chemical Vapor Deposition (CVD)	101
3.8.1	Introduction.....	101
3.8.2	CVD System Requirements	105
3.8.2.1	Gas Distribution System.....	105
3.8.2.2	CVD Reactors.....	105
3.8.3	Plasma-Assisted Chemical Vapor Deposition (PACVD) ...	109
3.8.3.1	Analysis of Physical and Chemical Aspects of Electrical Discharge.....	109
3.8.3.2	Main Processes of Plasma Medium.....	112
3.8.3.3	Kinetic and Thermodynamic Factors.....	113
3.8.3.4	Interactions between Plasma and Surface.....	115
3.8.4	Discharge System.....	117
3.8.5	Advantages of the CVD Method	117
3.8.6	Limitations and Disadvantages of CVD.....	118
3.9	Molecular Beam Epitaxy (MBE).....	119
3.9.1	Ultrahigh (UHV) System	119
3.9.2	Substrate Heater and Preserver	121
3.9.3	Source Cell for MBE.....	121
3.10	Ion Beam Assisted Film Deposition	122
3.10.1	Partially Ionized Molecular Beam Epitaxy (PI-MBE).....	122
3.10.2	Implant-Epitaxy Rig	123
3.10.3	IVD Technique	124
3.10.4	Double Ionic Beam (DIB) Technique	126
3.10.5	Ionized Cluster Beam (ICB).....	127
3.10.5.1	Physical Process.....	127
3.10.5.2	ICB Rig	127
3.10.5.3	ICB Advantages and Specifications	127
3.11	Pulsed Laser Deposition (PLD).....	129
3.12	Chemical Bath Deposition (CBD).....	130
	References	135

4	Mechanical Fabrication/Properties of Two-Dimensional Nanostructures.....	141
4.1	Introduction	141
4.2	Multiple-Layer Coatings	142
4.3	Fabrication Methods of Multiple-Layer Coatings	144
4.3.1	Multiple-Layer Electrodeposition Using a Single Bath	147
4.3.2	Mechanical Cleavage for Synthesis of Graphene Layers....	149
4.3.3	Chemomechanical Synthesis of Thin Films	150

	4.3.3.1	Hg _x Cd _{1-x} Se Thin Films	150	
	4.3.3.2	Cd _{1-x} Zn _x Se Thin Films.....	154	
	4.3.4	Achieving Enhanced Mechanical Properties	157	
4.4		Examining the Characteristics of the Multiple-Layer Coatings....	161	
	4.4.1	Mechanical Properties of the Multiple-Layer Nanostructures	161	
	4.4.2	Strengthening Theories in Multiple-Layer Systems	162	
	4.4.2.1	Orowan Mechanism	162	
	4.4.2.2	Hall–Patch Mechanism	162	
	4.4.2.3	Reinforcing by Virtual Forces	163	
	4.4.3	An Example from Cubic Boron Nitride Thin Films.....	164	
	4.4.4	The Effect of the Supermodule in Multilayer Systems....	169	
	4.4.5	Tribological Behavior of the Multilayer Coatings.....	170	
4.5		Examples of Mechanical Affected Properties of Two-Dimensional Nanostructures	172	
	4.5.1	TiN/CrN Nanomultilayer Thin Film	172	
	4.5.2	Mechanical Properties of Thin Films Using Indentation Techniques.....	175	
	4.5.3	Nanostructured Carbon Nitride Thin Films	177	
	4.5.4	Au–TiO ₂ Nanocomposite Thin Films	179	
	4.5.5	Effect of Internal Stress on the Mechanical Property of Thin CN _x Films	181	
	References	185	5
5		Chemical/Electrochemical Fabrication/Properties of Two-Dimensional Nanostructures.....	191	
	5.1	Introduction	191	
	5.2	History	191	1
	5.3	Direct Writing of Metal Nanostructures	193	
	5.4	Theory and Thermodynamic Method of Codeposition.....	196	
	5.4.1	Nucleation.....	196	
	5.4.2	Growth.....	199)
	5.4.3	Ostwald Ripening.....	200	
	5.4.4	Final Growth and Formation of Stable Nanoparticles	201	
	5.5	Phase Transition of Two-Dimensional Nanostructure by Electrochemical Potential	206	
	5.6	Procurement of Nanomaterials through Deposition.....	210	
	5.6.1	Procurement of Metals from Aqueous Solutions.....	210	
	5.6.2	Deposition of Metals by Reduction of Nonaqueous Solutions.....	213	;
	5.6.3	Deposition of Oxides from Aqueous Solutions.....	219	

5.6.4	Deposition of Oxides from Nonaqueous Solutions	222
5.6.5	Nanoimprint Lithography for Fabrication of Plasmonic Arrays.....	223
5.7	Conclusion.....	228
	References	229
6	Physical and Other Fabrication/Properties of Two-Dimensional Nanostructures.....	235
6.1	Introduction	235
6.2	Concepts of Nanostructured Thin Films.....	235
6.3	Important Physical Fabrication Methods	239
6.3.1	Excimer Laser	239
6.3.2	Molecular Beam Epitaxy (MBE).....	239
6.3.3	Ion Implantation.....	240
6.3.4	Focused Ion Beam (FIB) in Nanotechnology	241
6.3.5	FIB-SEM Dual Beam System	241
6.3.6	Langmuir–Blodgett Film (LBF).....	242
6.3.7	Electrospinning.....	243
6.4	Specification of Sculptured Thin Films	243
6.5	Phase, Length, and Time Sandwich	248
6.6	A Model to Make a Relation between Features and Structures of Dielectric Helicoidal Sculptured Thin Films	257
6.7	Analysis of Precise Couple Wave for the Incident Transverse Wave.....	266
6.8	Physical Principles and Applications of Different Fabrication Methods	274
6.8.1	Excimer Laser	274
6.8.2	Molecular Beam Epitaxy (MBE).....	275
6.8.3	Ion Implantation.....	277
6.8.3.1	Doping	278
6.8.3.2	Mesotaxy	279
6.8.3.3	Surface Operations.....	279
6.8.3.4	Amorphous Fabrication.....	280
6.8.4	Focused Ion Beam (FIB) in Nanotechnology	280
6.8.5	FIB-SEM Dual Beam System	281
6.8.6	Langmuir–Blodgett Film (LBF).....	281
6.8.7	Electrospinning.....	282
	References	283
	Index.....	293
