

Contents

1	Introduction	1
2	Review of Adaptive Control for Robotic Manipulators	5
2.1	Theoretical Perspectives	5
2.1.1	Self-Tuning Control of Robotic Manipulators	6
2.2	Experimental Perspectives	10
2.3	Brief Summary	16
2.3.1	Theoretical Side	16
2.3.2	Practical Side	16
3	A New Identification Method: GPIA	19
3.1	Problem Formulation	20
3.2	Principle of the GPIA	21
3.3	Application to Systems with Disturbances	25
3.4	Simulation Results	27
3.4.1	System with deterministic Parameters	29
3.4.2	System with abruptly varying Parameters	35
3.4.3	System with time-varying Parameters	41
3.5	Brief Summary	45
4	Predictive Controller	47
4.1	Problem Formulation	48
4.2	Self-Tuning Approach	50
4.3	Brief Summary	55
5	Experimental Application	56
5.1	The Experimental Environment	57
5.2	First Experimental Example	60
5.2.1	First Case	60
5.2.2	Second Case	71
5.3	Second Experimental Example	76
5.4	Brief Summary	78

6	Predictive Controller with Feedforward Compensation	85
6.1	Problem Formulation	86
6.2	Identification of the Compensation Model	88
6.3	Simulation Results	91
6.4	Brief Summary	95
7	Discrete Learning Control	96
7.1	Problem Formulation	97
7.2	Convergence of Error	98
7.3	Experimental Example	100
7.4	Brief Summary	105
8	Conclusion	106
8.1	General Summary	106
8.2	Prospects for Future Research	108
	Appendix	109
A	Important Parameters	109
A.1	Mechanical Parameters	109
A.2	Types of the Used DC-Motors	110
	Bibliography	111
