

1 Contents	
1 Contents	V
2 List of Symbols and of Abbreviations	VIII
3 Introduction	1
4 Fundamental Considerations, Assumptions and Definitions	7
4.1 Fundamentals: Considerations and assumptions	7
4.2 Definitions	13
4.3 The signification of the matrix and the vector coefficients	14
5 Theory of Mode Coupling Analysis	16
5.1 The light power in the far field of an ideal fibre	16
5.1.1 The introduction of transmission coefficients	16
5.1.2 The power at the input boundary	19
5.1.3 The power P_{ib} at injection angles $0 \leq \theta_i \leq \theta_c$	21
5.1.4 The power P_{ib} at injection angles $\theta_c < \theta_i \leq \theta_{max}$	22
5.1.5 The relative power $P_{ib,rel}$ and its approximation for $a \ll w_0$	26
5.1.6 The relative light power $P_{out,rel}$ in the far field	27
5.2 The intensity transfer matrix for an ideal fibre	27
5.3 Criteria for the mode coupling analysis	31
5.3.1 Criterion 1: The minimum screen size	31
5.3.2 Criterion 2: The laser beam divergence	35
5.3.3 Criterion 3: The spatial periodicity of a sensor	37
5.3.4 Criterion 4: The maximum matrix dimension	43
5.4 The power transfer matrix for an ideal fibre	44
5.5 Consideration of some model features	44
5.5.2 The major advantage of the model	44

5.5.3 The usefulness of the transfer matrices ${}^0_i\mathbf{T}$ and ${}^0_p\mathbf{T}$	45
5.6 Summary of section 5	47
6 The Mode Coupling Analyser	48
6.1 Technical aspects of the measurement	48
6.2 The description of the measurement sequence	60
6.3 Data analysis	61
6.3.1 The determination of the modulation matrix ${}^{kh}_p\mathbf{M}$	62
6.3.2 The absolute dynamics ${}^{kh}\Delta\vec{\mathbf{P}}$ and the delta matrix ${}^{kh}_p\Delta\mathbf{T}$	63
6.3.3 The power attenuation ${}^h_p\bar{\mathbf{A}}$	64
6.3.4 The statistical power distribution ${}^h_p\mathbf{D}$	64
6.3.5 The fibre from the viewpoint of delta matrices ${}^{kh}_p\Delta\mathbf{T}$	65
6.3.6 The advantage of the power transfer matrices over the intensity transfer matrices	67
6.4 Summary of section 6	67
7 The First Application	69
7.1 The theoretical background	69
7.2 The experimental results	73
8 Conclusion	79
8.1 Errors of measurement and possible remedies	79
8.1.1 Camera errors	79
8.1.2 The precision of the camera centring	80
8.1.3 The cleavage planes	81
8.1.4 Fluctuations of the laser light power	81
8.2 The valuation of the data analysis	81
8.2.1 The influence of noise on the modulation matrices	81

8.2.2 The influence of the dark signal on the power and intensity transfer matrices	84
8.2.3 The intensity and power transfer matrices	86
8.2.4 The statistical power distribution in the far field	88
8.3 Future research topics	90
8.4 Final remarks	90
9 References	92
