1	Introduction	1
1.1	MESFET Modeling Method	1
1.2	JFET and MESFET Modeling History	3
1.3	State of the Art of Large-Signal Models	8
1.4	Scope and Outline of this Work	9
2	MESFET Modeling Basis	11
2.1	Device Structure and Operating Principle	11
2.2	Device Governing Equations	14
2.3	Device-Oriented and Circuit-Oriented Model	15
2.4	The Requirements on Circuit-Oriented Nonlinear Models	16
2.5	Two Terminologies for MESFET Modeling	16
2.5.1	Equivalent Circuit and Device Governing Equations	17
2.5.2	Quasi-Static Approximation	18
2.6	The Gradual Channel Model	18
2.6.1	DC Analysis	19
2.6.2	AC Analysis	25
2.7	Issues Associated with the Physics-Based Nonlinear Models	28
2.7.1	Charge Non-Conservation Problem	28
2.7.2	Inconsistency Problem	33
3	Charge-Based Modeling Methodology	38
3.1	Derivation of Charge Sources Q_D and Q_S	38
3.2	Charge-Based Large-Signal Topologies	43
3.3	Capacitance Matrix and Small-Signal Circuit Elements . .	45
3.4	Verifying the Charge Source Definitions, Part I	46
3.5	Investigation of the MESFET Governing Equations	48
3.6	Verifying the Charge Source Definitions, Part II	53
3.6.1	Two-Dimensional DC Analysis	54
3.6.2	Two-Dimensional Dynamical Analysis	54
3.6.3	Results and Conclusions	55

4	Derivation of Charge-Conserved Consistent Model	65
4.1	Analytic Model Including Velocity Saturation	65
4.2	Quasi-2D Model Including Nonstationary Transport	72
4.3	Measuremental Determination of Parasitic Elements	79
4.4	Measuremental Verification of the Charge Sources	83
4.5	Investigation of τ and C_{ds}	88
4.6	Clarification of Madjar's Charge Source Definitions	92
4.7	Derivation of a Complete Charge-Based Large-Signal Model	94
4.7.1	Self-Heating Effect of GaAs MESFETs	94
4.7.2	Gate Conduction and Gate/Channel Breakdown	97
4.7.3	Analytical Description of Nonlinear Elements	98
5	Non-Quasi-Static Analyses	101
5.1	Small-Signal Dynamic Analysis	101
5.2	Quasi-Dynamic Large-Signal Model	112
6	Applications of the Charge-Based Model	117
6.1	Nonlinear Circuit Analysis Methods	117
6.2	Solution of Charge Non-Conservation and Inconsistency	125
6.3	Influence of Self-Heating Effect	127
6.4	Quasi-Static and (Quasi-) Dynamic Analysis	133
6.4.1	Small-Signal Analysis	133
6.4.2	Large-Signal Analysis	137
6.5	Simulations of a Monolithic Power Amplifier	139
7	Summary and Conclusions	147
7.1	Summary and Conclusions	147
7.2	Suggestions for Further Studies	150
A	The solution method of the dynamical GCA model	152
B	The incremental parameters of the analytical model	154
	Bibliography	159
