

Contents

Acknowledgements	1
Chapter 1. Introduction	3
Chapter 2. Generalities	7
2.1. Comments on the notation	7
2.2. Conditions for primitivity	9
2.3. Some results on linear groups of small degree	11
2.4. Reduction modulo ℓ and imprimitivity	13
2.5. A result on polynomials	14
Chapter 3. Sporadic Groups and the Tits Group	15
Chapter 4. Alternating Groups	25
Chapter 5. Exceptional Schur Multipliers and Exceptional Isomorphisms	29
5.1. Description of the tables	30
5.2. The proofs	40
Chapter 6. Groups of Lie type: Induction from non-parabolic subgroups	45
6.1. Outline of the strategy	45
6.2. The classical groups of Lie type	46
6.3. The exceptional groups of Lie type	76
Chapter 7. Groups of Lie type: Induction from parabolic subgroups	83
7.1. Harish-Chandra series	83
7.2. Lusztig series	84
7.3. Asymptotics	85
Chapter 8. Groups of Lie type: $\text{char}(K) = 0$	91
8.1. Some results on Weyl groups	91
8.2. Harish-Chandra series	93
8.3. Lusztig series	93
Chapter 9. Classical groups: $\text{char}(K) = 0$	95
9.1. The groups	95
9.2. Harish-Chandra series	95
9.3. Lusztig series	100
9.4. Examples for the restriction to commutator subgroups	102
Chapter 10. Exceptional groups	103
10.1. The exceptional groups of type E and F	103

10.2. Explicit results on some exceptional groups	104
Bibliography	109
