

Contents

1.	Boiler Operation	7
1.1	Types of Water-Tube Boiler	7
1.2	Pressures, Temperatures and Outputs	8
1.3	Feed Pumps	10
1.4	Circulating Pumps in Forced Circulation Boilers	11
1.5	Startup and Load Recirculation Systems in Once-Through Benson Boilers	12
2.	Physical Properties of Water and Steam	14
2.1	Specific Volume and Density of Water	14
2.2	Specific Volume of Steam	15
2.3	Enthalpy of Water and Steam	22
3.	Combustion Technology	31
3.1	Fuels	31
3.1.1	General Survey	31
3.1.2	Solid Fuels	31
3.1.3	Liquid Fuels	60
3.1.4	Gaseous Fuels	71
3.2	Combustion Calculation	83
3.2.1	Composition of Dry Air	83
3.2.2	Molar Mass, Molar Standard Volume, Standard Density	83
3.2.3	Water Vapour in Air	83
3.2.4	Elementary Combustion Calculation	85
3.2.5	Statistical Combustion Calculations	87
3.2.6	Excess Air Ratio	92
4.	Physical Properties of Air and Flue Gases	91
4.1	Gas Constant and Specific Volume	91
4.2	Specific Heat Capacity	94
4.3	Thermal Conductivity	96
5.	Properties of Solids and Liquids	103
5.1	Thermal Properties of Refractory and Insulating Materials	103
5.2	Thermal Properties of Metals	104
5.3	Thermal Properties of Fuels	108
5.4	Thermal Conductivity of Steels	109

6.	Similitude Parameters in Heat and Fluid Flow Mechanics	110
7.	Heat Transfer	114
7.1	Heat Conduction	114
7.2	Heat Convection	115
7.3	Heat Transfer by Radiation	127
7.4	Heat Transfer to Boiler Heating Surfaces	138
7.5	Guide Values	144
8.	Pressure Drop	145
8.1	General Pressure Drop Equation	145
8.2	Pressure Loss due to Friction, Deflection etc.	145
8.3	Pressure Drop due to Change in Kinetic Energy	155
8.4	Pressure Drop due to Change in Gravitational Energy ...	155
9.	Flow Measurement to DIN 1952 / ISO 5167	157
9.1	Flow Equation	157
9.2	Calculation of Differential Pressure	157
9.3	Calculation of Flow Coefficient	159
9.4	Calculation of Expansion Coefficient	160
9.5	Standardised Orifices and Nozzles	161
10.	Heat Balance of Steam Generator (DIN 1942)	166
10.1	Theoretical Basis	166
10.2	Example for Determination of Efficiency by the Heat Loss Method	175
10.3	Example for Determination of Efficiency by the Heat Loss Method for a Steam Generator downstream of a Gas Turbine	180
11.	Temperature Measurement	187
11.1	Standards and Guidelines	187
11.2	Measuring Methods	187
12.	Flue Gas Analyses	189
13.	Water in Steam Generation Technology	191
13.1	Guidelines	191
13.2	Fundamentals of Feedwater Chemistry	197

14.	Effect of Alloying Elements on the Properties of Steel	217
15.	Terms Used in the Heat Treatment of Iron and Steel (DIN 17014)	223
16.	Terms Relating to Corrosion and Oxidation of Metals and Alloys	231
17.	Heat-Resisting Steels	238
17.1	Heat-resisting Steels for Seamless Tubes	238
17.2	Mechanical Strength of Seamless Tubes	240
17.3	Heat-resisting Steels for Plates	246
17.4	Mechanical Strength Figures	248
18.	Units	252
19.	Symbols for Thermal Power Plants	267
