1 Preliminaries	1
1.1 Artinian and noetherian modules	2
1.2 Free modules, projective modules, and injective modules	4
1.3 Hereditary and semihereditary rings	8
1.4 Generalizations of injectivity	10
2 Rings characterized by their proper factor rings	14
2.1 Restricted artinian rings	14
2.2 Restricted perfect rings	16
2.3 Restricted von Neumann regular rings	19
2.4 Restricted self-injective rings	22
3 Rings each of whose proper cyclic modules has a chain condition	28
3.1 Rings each of whose proper cyclic modules is artinian	28
3.2 Rings with restricted minimum condition	30
3.3 Rings each of whose proper cyclic modules is perfect	34
4 Rings each of whose cyclic modules is injective (or CS)	37
4.1 Rings where each cyclic module is injective	37
4.2 Rings each of whose cyclic modules is CS	39
5 Rings each of whose proper cyclic modules is injective	45
6 Rings each of whose simple modules is injective (or Σ-injective)	49
6.1 V -rings	49
6.2 WV -rings	51
6.3 Σ - V rings	55
6.4 CSI rings	63
7 Rings each of whose (proper) cyclic modules is quasi-injective	65
7.1 Rings each of whose cyclic modules is quasi-injective	65
7.2 Rings each of whose proper cyclic modules is quasi-injective	66
8 Rings each of whose (proper) cyclic modules is continuous	71
8.1 Rings each of whose cyclic modules is continuous	71
8.2 Rings each of whose proper cyclic modules is continuous	72

9	Rings each of whose (proper) cyclic modules is π-injective	75
9.1	Rings each of whose cyclic modules is π -injective	75
9.2	Rings each of whose proper cyclic modules is π -injective	79
10	Rings with cyclics \aleph_0-injective, weakly injective, or quasi-projective	84
10.1	Rings each of whose cyclic modules is \aleph_0 -injective	84
10.2	Rings each of whose cyclic modules is weakly injective	88
10.3	Rings each of whose cyclic modules is quasi-projective	90
11	Hypercyclic, q-hypercyclic, and π-hypercyclic rings	94
11.1	Hypercyclic rings	94
11.2	q -hypercyclic rings	106
11.3	π -hypercyclic rings	110
12	Cyclic modules essentially embeddable in free modules	113
13	Serial and distributive modules	124
14	Rings characterized by decompositions of their cyclic modules	131
15	Rings each of whose modules is a direct sum of cyclic modules	147
16	Rings each of whose modules is an I_0-module	151
17	Completely integrally closed modules and rings	161
18	Rings each of whose cyclic modules is completely integrally closed	173
19	Rings characterized by their one-sided ideals	185
19.1	Rings each of whose one-sided ideals is quasi-injective	185
19.2	Rings each of whose one-sided ideals is a direct sum of quasi-injectives	190
19.3	Rings each of whose one-sided ideals is π -injective	200
19.4	Rings each of whose one-sided ideals is a direct sum of π -injective right ideals	200
19.5	Rings each of whose one-sided ideals is weakly injective	202
19.6	Rings each of whose one-sided ideals is quasi-projective	204
