Chapter 1. Introduction	1
Acknowledgement	2
Notation	2
Chapter 2. Statement of the main theorems	5
2.1. L -groups and L -embeddings	5
2.2. Formalism of local parameters	8
2.3. Formal global parameters	12
2.4. Endoscopic data and parameters	16
2.5. Statement of main results	27
2.6. Review of earlier results	32
Chapter 3. Local character identities and the intertwining relation	35
3.1. Local endoscopic transfer of test functions	35
3.2. Characterization of the local classification	40
3.3. Normalization of local intertwining operators	44
3.4. The local intertwining relation, part I	59
3.5. The local intertwining relation, part II	67
Chapter 4. Trace formulas and their stabilization	75
4.1. Discrete part of trace formula	75
4.2. Stabilization of trace formula	78
4.3. Preliminary comparison	80
Chapter 5. The Standard model	89
5.1. Stable multiplicity formula	89
5.2. The global intertwining relation, part I	93
5.3. The global intertwining relation, part II	97
5.4. The spectral expansion, part I	101
5.5. The spectral expansion, part II	104
5.6. The endoscopic expansion	108
5.7. The comparison	114
5.8. The two sign lemmas	123
Chapter 6. Study of Critical Cases	133
6.1. The case of square-integrable parameters	133
6.2. The case of elliptic parameters	142
6.3. Supplementary parameter	148
6.4. Generic parameters with local constraints	157
Chapter 7. Local Classification	169

7.1. Résumé on local parameters and local packets	169
7.2. Construction of global representation	172
7.3. Construction of global parameter	176
7.4. The local intertwining relation	180
7.5. Elliptic orthogonality relation	186
7.6. Local packets for non square-integrable parameters	190
7.7. Local packets for square-integrable composite parameters	191
7.8. Local packets for simple parameters	195
7.9. Resolution	199
Chapter 8. Nontempered representations	205
8.1. Duality operator of Aubert-Schneider-Stuhler	205
8.2. Local parameters	207
8.3. Construction of global parameters with local constraints	210
8.4. Local packets for square-integrable parameters	212
8.5. The local intertwining relation	215
Chapter 9. Global classification	221
9.1. Completion of induction arguments, part I	221
9.2. Completion of induction arguments, part II	226
9.3. Appendix	237
Chapter 10. Addendum	243
Bibliography	245
