

Contents

I. <i>Introduction and statement of the problem</i>	1
1. Aim and organization of the Amsterdam investigation	1
2. Nature of the psychological investigation	2
3. The sample investigated	5
II. <i>Description of the psychological examination</i>	6
1. The task of the psychological investigation	6
2. Instruments used	6
2.1. The Vineland Social Maturity Scale	6
2.2. The Wechsler Intelligence Scale for Children	9
2.3. The Stutsman test or MPS	14
3. Time and place of the psychological examination	16
4. Examiners and examined	16
III. <i>Results of the investigation with the Vineland Social Maturity Scale (VSMS)</i>	18
1. Available scores	18
2. Total scores and social ages	18
3. The social quotient	19
4. Discussion	23
IV. <i>Results of the investigation with the subtests of the Wechsler Intelligence Scale for Children (WISC)</i>	25
1. WISC-subtest 1. Information	25
2. WISC-subtest 2. Comprehension	27
3. WISC-subtest 3. Arithmetic	27
4. WISC-subtest 4. Similarities	28
5. WISC-subtest 5. Vocabulary	28
6. WISC-subtest 6. Digit Span	29
7. WISC-subtest 7. Picture Completion	29
8. WISC-subtest 8. Picture Arrangement	31

9. WISC-subtest	9. Block design	32
10. WISC-subtest	10. Object Assembly	32
11. WISC-subtest	11. Substitution	33
12. WISC-subtest	12. Mazes	34
V.	<i>WISC Profiles of the group investigated</i>	35
1.	A WISC profile for the whole group	35
2.	The two year-groups	39
3.	Boys and girls	41
VI.	<i>The WISC-scores VQ, PQ and IQ</i>	42
1.	The vQ or Verbal Intelligence Quotient	42
2.	The PQ or Performance Intelligence Quotient	42
3.	The WISC IQ	46
VII.	<i>Relations between WISC scores</i>	51
1.	Correlations between WISC scores	51
2.	Factor analyses of WISC scores	57
3.	The difference between VQ and PQ; absolute differences	63
4.	The statistical regression theory and the difference between VQ and PQ	68
VIII.	<i>Combinations of VSMS and WISC scores</i>	73
1.	Correlations between the scores for both tests	73
2.	The difference between SQ and IQ; absolute differences	74
3.	The statistical regression theory and the difference between SQ and IQ	79
4.	Categories based on (VQ-PQ) and (SQ-IQ)	80
IX.	<i>Some special groups</i>	90
1.	Children with a 'good' intelligence quotient	91
2.	Children with 'good' scores for Information and/or Arithmetic	92
3.	The children transferred from special to normal schools	94
4.	The most severely retarded children in the group under investigation	95
X.	<i>Sex differences in prevalence of mental retardation?</i>	99
1.	The difference between both age groups	100
2.	IQ levels and differences between numbers of boys and girls	101

3. Score differences between boys and girls	103
4. Score differences per IQ level	103
5. Discussion	104
XI. <i>Some results of the investigation with the Merrill Palmer Scale (Stutsman)</i>	108
XII. <i>Conclusions</i>	110
1. Tests and test scores	110
2. The group under investigation	113
<i>Summary</i>	118
<i>Appendix</i>	127
<i>References</i>	130
