PREFACE *xiii*

COMPUTER PROGRAMS *xvii*

GUIDE TO INSTRUCTORS *xxiii*

1 MATHEMATICAL MODELING **1**

1.1 Fundamental Considerations 1

1.2 Algebraic Equations 2

1.3 Difference Equations 5

1.4 Ordinary Differential Equations: Initial Value Problems 7

1.5 Ordinary Differential Equations: Boundary Value Problems 13

1.6 Integrals 18

1.7 Partial Differential Equations 20

1.8 Dimensional Analysis 23

1.9 Scaling 25

References 27

2 LINEAR ALGEBRAIC EQUATIONS AND MATRIX ANALYSIS 29

- 2.1 Introduction to Linear Systems 30
- 2.2 Fundamental Definitions and Operations of Matrix Analysis 32
- 2.3 Solutions of Linear Algebraic Systems 33
- 2.4 Error Analysis and Norms 44
- 2.5 The Algebraic Eigenvalue Problem 48
- 2.6 Miscellaneous Topics 52
- 2.7 Computer Programs 53
 - Problems 57
 - References 59

3 TAYLOR EXPANSIONS 60

- 3.1 Derivation and Error Analysis 60
- 3.2 Functions of Several Variables 64
- 3.3 Applications 65
- 3.4 Difficult Taylor Expansions 69
- 3.5 Advanced Error Analysis and Estimation 70
- 3.6 Computer Program 73
 - Problems 73
 - References 75

4 ACCELERATION TECHNIQUES FOR SERIES 76

- 4.1 The Euler Transformation 77
- 4.2 Padé Approximation 80
- 4.3 Shanks Transformation 84
- 4.4 Summation Techniques for Series 85
- 4.5 Computer Programs 91
 - Problems 94
 - References 96

5 INTERPOLATION 97

- 5.1 Linear Interpolation 97

- 5.2 General Polynomial Interpolation 100
- 5.3 Miscellaneous Notes on Polynomial Interpolation 102
- 5.4 Spline Interpolation 103
- 5.5 Rational Interpolation 107
- 5.6 Rational Least Squares 109
- 5.7 General One-Dimensional Interpolation 112
- 5.8 Multidimensional Interpolation 112
- 5.9 Summary 113
- 5.10 Computer Programs 114
 - Problems 119
 - References 120

6 LEAST-SQUARES APPROXIMATION 121

- 6.1 Linear Least Squares 121
- 6.2 Nonlinear Least Squares 127
- 6.3 General Multiple Linear Regression 131
- 6.4 General Multiple Nonlinear Regression 132
- 6.5 Miscellaneous Topics in Least Squares 134
- 6.6 Computer Programs 139
 - Problems 147
 - References 149

7 NONLINEAR ALGEBRAIC EQUATIONS 150

- 7.1 Solution of a Single Equation in One Unknown 150
- 7.2 All Roots of a Polynomial Equation 162
- 7.3 Systems of Nonlinear Algebraic Equations 165
- 7.4 The Method of Continuation (Homotopy) 168
- 7.5 Asymptotic Solutions of an Equation with a Parameter 172
- 7.6 Recommendations and Comments 175
- 7.7 Computer Programs 176
 - Problems 183
 - References 185

8 OPTIMIZATION 187

- 8.1 Relationships for Unconstrained Problems 188
- 8.2 Relationships for Equality-Constrained Problems 192
- 8.3 Numerical Methods for Unconstrained Problems 196
- 8.4 Linear Programming 198
- 8.5 Nonlinear Programming (NLP) 208
- 8.6 Computer Programs 214
 - Problems 219
 - References 221

9 EVALUATION OF INTEGRALS 223

- 9.1 Numerical Quadrature: The Trapezoidal Rule with Richardson Extrapolation 223
- 9.2 Functions Defined by Data 229
- 9.3 Gauss Quadrature 232
- 9.4 Infinite Integrals 233
- 9.5 Approximate Analytical Evaluation 236
- 9.6 Asymptotic Expansion of Integrals 240
- 9.7 Computer Programs 246
 - Problems 248
 - References 250

**10 ORDINARY DIFFERENTIAL EQUATIONS:
ANALYTICAL METHODS 252**

- 10.1 Review of Elementary Methods 252
- 10.2 Series Solution 255
- 10.3 Method of Successive Approximation 260
- 10.4 Method of Weighted Residuals 262
- 10.5 Asymptotic Methods 265
- 10.6 Computer Program 272
 - Problems 273
 - References 275

11 NUMERICAL METHODS FOR ODE INITIAL VALUE PROBLEMS 277

- 11.1 Non-Stiff Methods 277
- 11.2 Local Error Estimation and Variable Step-Size Integration 286
- 11.3 Errors and the Use of Global Extrapolation 287
- 11.4 Stability of Numerical Methods 296
- 11.5 Stiff Equations and Methods 300
- 11.6 Special Applications 303
- 11.7 Computer Programs 305
 - Problems 309
 - References 311

12 NUMERICAL METHODS FOR ODE BOUNDARY VALUE PROBLEMS 312

- 12.1 Direct Use of Taylor's Theorem 312
- 12.2 The Shooting Method for Boundary Value Problems 314
- 12.3 The Finite Difference Method for Boundary Value Problems 317
- 12.4 The Refined Finite Difference Method: The Tridiagonal Algorithm 323
- 12.5 The Method of Weighted Residuals 328
- 12.6 Special Applications 328
- 12.7 Computer Programs 331
 - Problems 336
 - References 337

13 ANALYTICAL METHODS FOR PARTIAL DIFFERENTIAL EQUATIONS 339

- 13.1 Separation of Variables 340
- 13.2 Similarity Solutions 348
- 13.3 The Integral Method 351
- 13.4 Asymptotic Methods 353
- 13.5 Fitting a Numerical Function Using Rational Least Squares 355
 - Problems 356
 - References 357

**14 NUMERICAL METHODS FOR PARTIAL
DIFFERENTIAL EQUATIONS 359**

- 14.1 The Finite Difference Method 360
- 14.2 The Finite Difference Method for Marching Problems 361
- 14.3 Stability Analysis for Marching Problems 369
- 14.4 The Finite Difference Method for Steady-State Problems 373
- 14.5 The Method of Lines (MOL) for Marching Problems 378
- 14.6 The Method of Lines for Steady-State Problems 392
- 14.7 The Finite Element Method 393
- 14.8 Computer Programs 393
 - Problems 397
 - References 399

APPENDICES

- Appendix A: Computer Programming 401
- Appendix B: Difference Equations 418
- Appendix C: Review of Infinite Series 421
- Appendix D: Advanced Series Manipulations 425
- Appendix E: Limits and Convergence Acceleration 433
- Appendix F: The Euler-Maclaurin Summation Formulas 439
- Appendix G: Numerical Differentiation 442
