1	Introduction: Rating Scales versus DSM-III-R and ICD-10	1
1.1	Concordance Between Rating Scales and DSM-III-R or ICD-10	2
1.1.1	Phenomenology	2
1.1.2	Psychopathology	3
1.1.3	Health-Status Profiles	4
1.1.4	Health-Related Quality of Life: A Measurement Problem	5
1.2	Divergence Between Rating Scales and DSM-III-R	7
1.2.1	Target Syndromes: The Phenomenological Spectrum of Core Symptoms Versus the Discriminating Points of Diagnosis	8
1.2.2	Procedural Algorithms Versus Rating Scale Spectrum	9
1.2.3	Administration: Types of Information	14
1.3	Comparison Between ICD-9, DSM-III and Rating Scales: Degrees of Quantification	15
1.4	The Taxonomic Arrangement of Rating Scales: The Multi-Axial Approach	17
1.5	The Psychometric Characteristics and Criteria for the Selected Rating Scales	19
1.5.1	Content Validity	20
1.5.2	Criterion and Construct Validity	22
1.5.3	Inter-observer Reliability	26
1.6	General Considerations on Quantifying Psychopathological States	30
1.6.1	Likert-type Rating Scales or Categorical Scales	31
1.6.2	Analogue or Graphic Scales	32
1.6.2.1	Continuous or Visual Analogue Scales	32
1.6.2.2	Discretized Analogue Scales	33
1.6.2.3	Global Severity Versus Global Improvement Scales	33
1.7	The User's Perspective for This Compendium	35
