Chapter 1. Introduction	1
1.1. Notation	5
Chapter 2. Integrability properties of approximation processes for SDEs	9
2.1. General discrete-time stochastic processes	9
2.2. Explicit approximation schemes	20
2.3. Implicit approximation schemes	34
Chapter 3. Convergence properties of approximation processes for SDEs	45
3.1. Setting and assumptions	45
3.2. Consistency	45
3.3. Convergence in probability	46
3.4. Strong convergence	54
3.5. Weak convergence	59
3.6. Numerical schemes for SDEs	65
Chapter 4. Examples of SDEs	79
4.1. Setting and assumptions	79
4.2. Stochastic van der Pol oscillator	80
4.3. Stochastic Duffing-van der Pol oscillator	81
4.4. Stochastic Lorenz equation	82
4.5. Stochastic Brusselator in the well-stirred case	82
4.6. Stochastic SIR model	84
4.7. Experimental psychology model	85
4.8. Scalar stochastic Ginzburg-Landau equation	86
4.9. Stochastic Lotka-Volterra equations	86
4.10. Volatility processes	89
4.11. Overdamped Langevin equation	92
Bibliography	95
