<b>Preface</b>	<b>page ix</b>
<b>Acknowledgements</b>	<b>xv</b>
<b>0 The algebraic properties of linear spaces and convex sets</b>	<b>1</b>
0.1 Linear spaces	1
0.2 Convex sets	6
0.3 Notes	9
<b>1 Norms and norm topologies</b>	<b>13</b>
1.1 Norm topologies	14
1.2 The unique linear topology on $\mathbb{R}^d$	27
1.3 The Hahn–Banach theorem	32
1.4 The existence and uniqueness of Haar measure	36
1.5 Notes	42
<b>2 Convex bodies</b>	<b>45</b>
2.1 Separation and support theorems	46
2.2 Support functions and polar reciprocals	48
2.3 Volumes and mixed volumes	53
2.4 Various derived metrics	60
2.5 Approximation of convex sets and the Blaschke selection theorem	64
2.6 Notes	71
<b>3 Comparisons and contrasts with Euclidean space</b>	<b>75</b>
3.1 The Mazur–Ulam theorem	76
3.2 Normality in Minkowski space	77
3.3 The Löwner ellipsoid	80
3.4 Characterizations of Euclidean space	85
3.5 Notes	94

<b>4</b>	<b>Two-dimensional Minkowski spaces</b>	<b>99</b>
4.1	Inscribed regular hexagons and other constructions	100
4.2	Sets of constant width and equichordal sets	106
4.3	Lengths of curves, perimeter of the unit ball	111
4.4	The isoperimetric problem in a Minkowski plane	118
4.5	Isoperimetric inequalities	123
4.6	Transversality	125
4.7	Radon curves	127
4.8	Notes	129
<b>5</b>	<b>The concept of area and content</b>	<b>135</b>
5.1	Requirements and examples	137
5.2	The role of the function $\sigma_B$	141
5.3	The properties and the normalization of <b>I</b>	145
5.4	The isoperimetries that arise from Examples 5.1.4	150
5.5	Further properties of <b>I</b>	171
5.6	Notes	182
<b>6</b>	<b>Special properties of the Holmes–Thompson definition</b>	<b>187</b>
6.1	The convexity of the area function $\sigma$	187
6.2	Properties of the mapping <b>I</b>	195
6.3	Cauchy's formula for surface areas	201
6.4	Integral geometry in Minkowski spaces	205
6.5	Bounds for the surface area of $B$	212
6.6	Miscellaneous properties	215
6.7	Notes	222
<b>7</b>	<b>Special properties of the Busemann definition</b>	<b>229</b>
7.1	The convexity of the area function $\sigma$	229
7.2	Properties of the mapping <b>I</b>	233
7.3	Area and Hausdorff measures	237
7.4	Bounds for the surface area of $B$	242
7.5	Notes	245
<b>8</b>	<b>Trigonometry</b>	<b>251</b>
8.1	The functions $c_m$ and $s_m$	251
8.2	The function $\alpha$	258
8.3	Trigonometric formulas	260
8.4	Differentiation of the trigonometric functions	264
8.5	Notes	271
<b>9</b>	<b>Various numerical parameters</b>	<b>275</b>
9.1	Projection constants	276
9.2	Macphail's constant	283

9.3	The inner metric	286
9.4	The girth, perimeter, inner radius and inner diameter of $X$	288
9.5	Five examples in $\mathbb{R}^d$	293
9.6	Relationships with the Banach–Mazur distance and extreme values	300
9.7	Notes	304
<b>10</b>	<b>Fifty problems</b>	<b>307</b>
	<b>References</b>	<b>313</b>
	<b>Notation index</b>	<b>331</b>
	<b>Author index</b>	<b>335</b>
	<b>Subject index</b>	<b>339</b>
