

CONTENTS

Preface	<i>xi</i>
Common Notation	<i>xvi</i>
1 Matrix Algebra	1
1.1 Introduction,	<i>1</i>
1.2 Equality, addition, and multiplication by a scalar,	<i>3</i>
1.3 The multiplication of matrices,	<i>6</i>
1.4 The inverse matrix,	<i>14</i>
1.5 The partitioning of matrices,	<i>21</i>
Miscellaneous exercises 1,	<i>24</i>
2 Some Simple Applications of Matrices	30
2.1 Introduction,	<i>30</i>
2.2 A Markov-chain example,	<i>31</i>
2.3 A simple model of growth,	<i>39</i>

2.4	A plane pin-jointed framework,	43
2.5	Production planning,	51
2.6	The method of least squares,	57
	Miscellaneous exercises 2,	63
3	Simultaneous Linear Equations and Elementary Operations	66
3.1	Introduction,	66
3.2	The method of Gauss (or successive) elimination,	67
3.3	The existence of solutions for a set of equations: Some examples,	76
3.4	Row operations to simplify matrices and sets of equations,	80
3.5	Row-echelon form and rank,	88
3.6	Solution sets for equations; the Fredholm Alternative,	91
3.7	Inverses of matrices,	95
	Miscellaneous exercises 3,	97
4	Vectors and Vector Spaces	102
4.1	Geometrical vectors in three-dimensional space,	102
4.2	General vector spaces,	107
4.3	Linear dependence and independence,	112
4.4	Basis and dimension,	118
4.5	Matrices, rank, basis, and dimension,	123
4.6	Vector norms,	130
4.7	Inner products and orthogonality,	133
	Miscellaneous exercises 4,	143
5	Matrices and Linear Transformations	150
5.1	Linear transformations,	150
5.2	Equations and inverses,	154
5.3	Norms of matrices and linear transformations,	163
5.4	Inverses of perturbed matrices,	168
5.5	Condition of linear equations,	170
	Miscellaneous exercises 5,	174
6	Practical Solution of Systems of Equations	177
6.1	Introduction,	177
6.2	Gauss elimination,	179
6.3	The choice of pivots in elimination,	184

6.4 Solving slightly modified systems,	191
6.5 Determinants,	198
6.6 Determinantal representation of solutions and inverses,	205
Miscellaneous exercises 6,	209
7 Linear Programming	213
7.1 The simplex method: An example,	213
7.2 The general linear program,	220
7.3 The simplex method in general,	225
7.4 Complications for the simplex method,	232
7.5 Duality,	244
Miscellaneous exercises 7,	253
8 Eigenvalues and Eigenvectors: An Overview	256
8.1 Introduction,	256
8.2 Definitions and basic properties,	263
8.3 Eigensystems, decompositions, and transformations,	271
8.4 Similarity transformations,	278
8.5 Unitary matrices and transformations,	282
8.6 The condition of eigensystems,	289
Miscellaneous exercises 8,	295
9 Unitary Transformations, Eigensystems, and Applications	301
9.1 Introduction,	301
9.2 Schur decomposition or canonical form,	302
9.3 Eigensystems of normal matrices,	307
9.4 The QR decomposition,	315
9.5 The singular-value decomposition,	323
9.6 Least squares and the generalized inverse,	330
9.7 Analyzing influential factors in experiments,	342
Miscellaneous exercises 9,	346
10 Similarity Transformations, Eigensystems, and Applications	351
10.1 Introduction,	351
10.2 Defective matrices: Examples and their meanings,	353
10.3 Jordan form of an $n \times n$ matrix,	358
10.4 Jordan form and eigensystems of general matrices,	367

10.5 Discrete system evolution and powers of matrices,	374
10.6 Iterative solution of linear equations,	383
10.7 Continuous system evolution and matrix exponentials,	393
Miscellaneous exercises 10,	403
11 Quadratic Forms and Variational Principles	408
11.1 Introduction,	408
11.2 A geometric example,	410
11.3 General quadratic forms,	418
11.4 Definite quadratic forms,	425
11.5 Extremizing quadratic forms: Rayleigh's Principle,	429
11.6 Extremizing quadratic forms: The Min-max Principle,	436
Miscellaneous exercises 11,	442
Appendix 1 Hints and Answers to Selected Exercises	447
Appendix 2 Bibliography	459
Index to Numbered Statements	465
Index
