<b>Part 1 In search of the “optimal embedding” of a knot</b>	<b>1</b>
<b>Chapter 1 Introduction</b>	<b>3</b>
1.1 Motivational problem . . . . .	3
1.2 Notations and remarks . . . . .	8
<b>Chapter 2 <math>\alpha</math>-energy functional <math>E^{(\alpha)}</math></b>	<b>9</b>
2.1 Renormalizations of electrostatic energy of charged knots . . . . .	9
2.2 Renormalizations of $r^{-\alpha}$ -modified electrostatic energy, $E^{(\alpha)}$ . . . . .	15
2.3 Asymptotic behavior of $r^{-\alpha}$ energy of polygonal knots . . . . .	22
2.4 The self-repulsiveness of $E^{(\alpha)}$ . . . . .	26
<b>Chapter 3 On <math>E^{(2)}</math></b>	<b>31</b>
3.1 Continuity . . . . .	31
3.2 Behavior of $E^{(2)}$ under “pull-tight” . . . . .	34
3.3 Möbius invariance . . . . .	34
3.4 The cosine formula for $E^{(2)}$ . . . . .	35
3.5 Existence of $E^{(2)}$ minimizers . . . . .	42
3.6 Average crossing number and finiteness of knot types . . . . .	44
3.7 Gradient, regularity of $E^{(2)}$ minimizers, and criterion of criticality . . . . .	45
3.8 Unstable $E^{(2)}$ -critical torus knots . . . . .	54
3.9 Energy associated to a diagram . . . . .	57

3.9.1	General framework . . . . .	58
3.9.2	“X-energy” . . . . .	59
3.10	Normal projection energies . . . . .	60
3.11	Generalization to higher dimensions . . . . .	60
<b>Chapter 4 <math>L^p</math> norm energy with higher index</b>		<b>63</b>
4.1	Definition of $(\alpha, p)$ -energy functional for knots $e^{\alpha, p}$ . . . . .	63
4.2	Control of knots by $E^{\alpha, p}$ ( $e^{\alpha, p}$ ) . . . . .	65
4.3	Complete system of admissible solid tori and finiteness of knot types . . . . .	75
4.4	Existence of $E^{\alpha, p}$ minimizers . . . . .	77
4.5	The circles minimize $E^{\alpha, p}$ . . . . .	78
4.6	Definition of $\alpha$ -energy polynomial for knots . . . . .	79
4.7	Brylinski’s beta function for knots . . . . .	79
4.8	Other $L^p$ -norm energies . . . . .	81
<b>Chapter 5 Numerical experiments</b>		<b>83</b>
5.1	Numerical experiments on $E^{(2)}$ . . . . .	84
5.2	$\alpha > 2$ cases. The limit as $n \rightarrow \infty$ when $\alpha \geq 3$ . . . . .	84
5.3	Table of approximate minimum energies . . . . .	86
<b>Chapter 6 Stereo pictures of <math>E^{(2)}</math> minimizers</b>		<b>91</b>
<b>Chapter 7 Energy of knots in a Riemannian manifold</b>		<b>101</b>
7.1	Definition of the unit density $(\alpha, p)$ -energy $E_M^{\alpha, p}$ . . . . .	101
7.2	Control of knots by $E_M^{\alpha, p}$ . . . . .	102
7.3	Existence of energy minimizers . . . . .	105
7.4	Examples : Energy of knots in $S^3$ and $\mathbb{H}^3$ . . . . .	107
7.4.1	Energy of circles in $S^3$ . . . . .	107
7.4.2	Energy of trefoils on Clifford tori in $S^3$ . . . . .	109
7.4.3	Existence of $E_{S^3}^{(2)}$ minimizers . . . . .	109
7.4.4	Energy of knots in $\mathbb{H}^3$ . . . . .	110
7.5	Other definitions . . . . .	114
7.6	The existence of energy minimizers . . . . .	115
<b>Chapter 8 Physical knot energies</b>		<b>117</b>
8.1	Thickness and ropelength . . . . .	117
8.2	Four thirds law . . . . .	118
8.3	Osculating circles and osculating spheres . . . . .	119

8.4	Global radius of curvature . . . . .	121
8.5	Self distance type energies defined via the distance function . .	127
8.6	Relation between these geometric quantities and $e^{\alpha, p}$ . . . . .	131
8.7	Numerical computations and applications . . . . .	132

**Part 2 Energy of knots from a conformal geometric viewpoint 133**

**Chapter 9 Preparation from conformal geometry 135**

9.1	The Lorentzian metric on Minkowski space . . . . .	135
9.2	The Lorentzian exterior product . . . . .	143
9.3	The space of spheres . . . . .	144
9.4	The 4-tuple map and the cross ratio of 4 points . . . . .	147
9.5	Pencils of spheres . . . . .	151
9.6	Modulus of an annulus . . . . .	156
9.7	Cross-separating annuli and the modulus of four points . . . .	158
9.8	The measure on the space of spheres $\Lambda$ . . . . .	165
9.9	Orientations of 2-spheres . . . . .	168

**Chapter 10 The space of non-trivial spheres of a knot 175**

10.1	Non-trivial spheres of a knot . . . . .	175
10.2	The 4-tuple map for a knot . . . . .	177
10.3	Generalization of the 4-tuple map to the diagonal . . . . .	179
10.3.1	Twice tangent spheres . . . . .	179
10.3.2	Tangent spheres . . . . .	183
10.3.3	Osculating spheres . . . . .	184
10.4	Lower semi-continuity of the radii of non-trivial spheres . . . .	186

**Chapter 11 The infinitesimal cross ratio 189**

11.1	The infinitesimal cross ratio of the complex plane . . . . .	189
11.2	The real part as the canonical symplectic form of $T^*S^2$ . . . .	191
11.3	The infinitesimal cross ratio for a knot . . . . .	201
11.4	From the cosine formula to the original definition of $E^{(2)}$ . . .	205
11.5	$E_o^{(2)}$ -energy for links . . . . .	207

**Chapter 12 The conformal sin energy  $E_{\sin \theta}$  213**

12.1	The projection of the inverted open knot . . . . .	213
12.2	The geometric meaning of $E_{\sin \theta}$ . . . . .	215

12.3	Self-repulsiveness of $E_{\sin \theta}$ . . . . .	216
12.4	$E_{\sin \theta}$ and the average crossing number . . . . .	221
12.5	$E_{\sin \theta}$ for links . . . . .	221
<b>Chapter 13 Measure of non-trivial spheres</b>		<b>223</b>
13.1	Non-trivial spheres, tangent spheres and twice tangent spheres	223
13.2	The volume of the set of the non-trivial spheres . . . . .	224
13.3	The measure of non-trivial spheres in terms of the infinitesimal cross ratio . . . . .	226
13.4	Non-trivial annuli and the modulus of a knot . . . . .	231
13.5	Self-repulsiveness of the measure of non-trivial spheres . . . . .	235
13.6	The measure of non-trivial spheres for non-trivial knots . . . . .	237
13.7	Measure of non-trivial spheres for links . . . . .	241
<b>Appendix A Generalization of the Gauss formula for the linking number</b>		<b>243</b>
A.1	The Gauss formula for the linking number . . . . .	243
A.2	The writhe and the self-linking number . . . . .	245
A.3	The total twist . . . . .	247
A.4	Average crossing number . . . . .	249
A.5	The conformal angle and the Gauss integral . . . . .	250
A.6	Möbius invariance of the writhe . . . . .	252
A.7	The circular Gauss map and the inverted open knots . . . . .	253
<b>Appendix B The 3-tuple map to the set of circles in <math>S^3</math></b>		<b>257</b>
B.1	The set of unoriented circles in $S^3$ . . . . .	257
B.2	The 3-tuple map to the set of circles . . . . .	257
<b>Appendix C Conformal moduli of a solid torus</b>		<b>259</b>
C.1	Modulus of a 2-dimensional annulus revisited . . . . .	259
C.2	Conformal moduli of a solid torus . . . . .	260
<b>Appendix D Kirchhoff elastica</b>		<b>263</b>
<b>Appendix E Open problems and dreams</b>		<b>265</b>
	Bibliography	271
	Index	285
