<i>Preface</i>	vii
Part 1 Linear Algebra	1
1. Modules and Linear Spaces	3
1.1 Introduction	3
1.2 Permutations	3
1.3 Groups, Rings, and Fields	8
1.4 Closure and Interior Systems	15
1.5 Modules	20
1.6 Linear Mappings	22
1.7 Submodules	26
1.8 Linear Combinations	31
1.9 The Lattice of Submodules of a Module	32
1.10 Linear Independence	33
1.11 Linear Spaces	35
1.12 Module Isomorphism Theorems	41
1.13 Direct Sums and Direct Products	43
1.14 Dual Modules and Linear Spaces	53
1.15 Topological Linear Spaces	58
Exercises and Supplements	60
Bibliographical Comments	64
2. Matrices	65
2.1 Introduction	65
2.2 Matrices with Arbitrary Elements	65

2.3	Rings and Matrices	68
2.4	Special Classes of Matrices	79
2.5	Complex Matrices	81
2.6	Partitioned Matrices and Matrix Operations	87
2.7	Invertible Matrices	89
2.8	Matrices and Linear Transformations	95
2.9	The Notion of Rank	98
2.10	Matrix Similarity and Congruence	110
2.11	Linear Systems and Matrices	113
2.12	The Row Echelon Form of Matrices	115
2.13	The Kronecker and Hadamard Products	125
2.14	Linear Inequalities	129
2.15	Complex Multilinear Forms	135
	Exercises and Supplements	137
	Bibliographical Comments	159
3.	MATLAB	161
3.1	Introduction	161
3.2	The Interactive Environment of MATLAB	161
3.3	Number Representation and Arithmetic Computations	162
3.4	Matrices Representation	169
3.5	Random Matrices	179
3.6	Control Structures	181
3.7	Indexing	187
3.8	Functions	189
3.9	Matrix Computations	191
	Exercises and Supplements	193
	Bibliographical Comments	195
4.	Determinants	197
4.1	Introduction	197
4.2	Multilinear Forms	197
4.3	Cramer's Formula	214
4.4	Partitioned Matrices and Determinants	215
	MATLAB Computations	218
	Exercises and Supplements	219
	Bibliographical Comments	232

5. Norms on Linear Spaces	233
5.1 Introduction	233
5.2 Fundamental Inequalities	233
5.3 Metric Spaces	236
5.4 Norms	239
5.5 Vector Norms on $\mathbb{R}^n$	241
5.6 The Topology of Normed Linear Spaces	250
5.7 Norms for Matrices	255
5.8 Matrix Sequences and Matrix Series	263
5.9 Condition Numbers for Matrices	267
5.10 Conjugate Norms	269
MATLAB Computations	272
Exercises and Supplements	273
Bibliographical Comments	285
6. Inner Product Spaces	287
6.1 Introduction	287
6.2 Inner Products and Norms	290
6.3 Orthogonality	294
6.4 Hyperplanes in $\mathbb{R}^n$	298
6.5 Unitary and Orthogonal Matrices	300
6.6 Projection on Subspaces	304
6.7 Positive Definite and Positive Semidefinite Matrices	310
6.8 The Gram-Schmidt Orthogonalization Algorithm	319
6.9 The QR Factorization of Matrices	324
6.10 Matrix Groups	332
MATLAB Computations	334
Exercises and Supplements	338
Bibliographical Comments	349
7. Convexity	351
7.1 Introduction	351
7.2 Convex Sets	351
7.3 Separation of Convex Sets	368
7.4 Cones in $\mathbb{R}^n$	375
7.5 Convex Functions	382
7.6 Convexity and Inequalities	401
7.7 Constrained Extrema and Convexity	406

Exercises and Supplements	415
Bibliographical Comments	427
8. Eigenvalues	429
8.1 Introduction	429
8.2 Eigenvalues and Eigenvectors	429
8.3 The Characteristic Polynomial of a Matrix	434
8.4 Spectra of Special Matrices	441
8.5 Geometry of Eigenvalues	447
8.6 Spectra of Kronecker Products	449
8.7 The Power Method for Eigenvalues	450
8.8 The QR Iterative Algorithm	453
MATLAB Computations	454
Exercises and Supplements	455
Bibliographical Comments	459
9. Similarity and Spectra	461
9.1 Introduction	461
9.2 Diagonalizable Matrices	461
9.3 Matrix Similarity and Spectra	465
9.4 The Sylvester Operator	487
9.5 Geometric versus Algebraic Multiplicity	490
9.6 λ -Matrices	492
9.7 The Jordan Canonical Form	504
9.8 Matrix Norms and Eigenvalues	510
9.9 Matrix Pencils and Generalized Eigenvalues	518
9.10 Quadratic Forms and Quadrics	521
9.11 Spectra of Positive Matrices	530
9.12 Spectra of Positive Semidefinite Matrices	534
9.13 K -Matrices	536
MATLAB Computations	545
Exercises and Supplements	546
Bibliographical Comments	564
10. Singular Values	565
10.1 Introduction	565
10.2 Singular Values and Singular Vectors	565
10.3 Numerical Rank of Matrices	577

10.4	Updating SVDs	580
10.5	Polar Form of Matrices	583
10.6	CS Decomposition	584
10.7	Geometry of Subspaces	588
10.8	Spectral Resolution of a Matrix	594
	MATLAB Computations	602
	Exercises and Supplements	607
	Bibliographical Comments	617
Part 2	Applications	619
11.	Graphs and Matrices	621
11.1	Introduction	621
11.2	Graphs	621
11.3	Graph Connectivity	625
11.4	Directed Graphs	635
11.5	Trees	640
11.6	The Adjacency and Incidence Matrices	652
11.7	Operations on Graphs	662
11.8	Digraphs of Matrices	664
	MATLAB Computations	668
	Exercises and Supplements	671
	Bibliographical Comments	677
12.	Data Sample Matrices	679
12.1	Introduction	679
12.2	The Sample Matrix	679
12.3	Biplots	688
	Exercises and Supplements	694
	Bibliographical Comments	695
13.	Least Squares Approximation and Data Mining	697
13.1	Introduction	697
13.2	Linear Regression	697
13.3	The Least Square Approximation and QR Decomposition	702
13.4	Partial Least Square Regression	703
13.5	Locally Linear Embedding	705
	MATLAB Computations	711

Exercises and Supplements	711
Bibliographical Comments	716
14. Dimensionality Reduction Techniques	717
14.1 Introduction	717
14.2 Principal Component Analysis	717
14.3 Linear Discriminant Analysis	729
14.4 Latent Semantic Indexing	731
14.5 Recommender Systems and SVD	734
14.6 Metric Multidimensional Scaling	737
14.7 Procrustes Analysis	745
14.8 Non-negative Matrix Factorization	751
Exercises and Supplements	758
Bibliographical Comments	765
15. The k -Means Clustering	769
15.1 Introduction	769
15.2 The k -Means Algorithm and Convexity	769
15.3 Relaxation of the k -Means Problem	773
15.4 SVD and Clustering	776
15.5 Evaluation of Clusterings	779
MATLAB Computations	780
Exercises and Supplements	783
Bibliographical Comments	791
16. Spectral Properties of Graphs and Spectral Clustering	793
16.1 Introduction	793
16.2 The Ordinary Spectrum of a Graph	793
16.3 The Laplacian Spectrum of a Graph	796
16.4 Graph Cuts, Separators, and Clusterings	812
16.5 Spectral Clustering Algorithms	827
Exercises and Supplements	834
Bibliographical Comments	842
<i>Bibliography</i>	843
<i>Index</i>	853
