<i>Preface</i>	vii
<i>Acknowledgments</i>	ix
1. Algorithmic systems biology	1
1.1 Converging sciences	1
1.2 The approach	4
1.3 Structure of the book	6
1.4 Summary	7
1.5 Further reading	7
2. Setting the context	9
2.1 The structure of the cell	9
2.2 DNA, RNA and genes	13
2.2.1 DNA replication	17
2.2.2 DNA repair	18
2.2.3 DNA recombination	19
2.2.4 Transcription	20
2.3 Proteins	20
2.3.1 Translation	22
2.3.2 Protein folding	24
2.4 Metabolites	24
2.5 Cellular processes	29
2.5.1 Metabolism	29
2.5.2 Cellular signaling	30
2.5.3 Trafficking and translocation	33
2.6 Experimental methods	35

2.6.1	Microarray technology	35
2.6.2	DNA sequencing	37
2.6.3	Mass spectrometry	43
2.6.4	Nuclear magnetic resonance spectroscopy	44
2.6.5	Environmental data	46
2.7	Summary	46
2.8	Further reading	47
3.	Systems and models	49
3.1	Systems	49
3.1.1	Classification of systems	50
3.1.2	Properties of systems	57
3.1.3	Complexity	69
3.1.4	Hierarchical systems	72
3.2	Model	74
3.2.1	Classification of models	77
3.2.2	Properties of models	80
3.2.3	Complexity	86
3.2.4	Hierarchical models	87
3.3	Summary	88
3.4	Further reading	89
4.	Static modeling technologies	91
4.1	Preliminary assessment	91
4.2	Linear regression	94
4.2.1	Penalized regression	99
4.3	Dimensionality reduction methods	102
4.3.1	Principal component analysis	103
4.3.2	Linear discriminant analysis	106
4.3.3	Canonical correlation analysis	107
4.4	Clustering	110
4.4.1	Hierarchical clustering	112
4.4.2	K-means clustering	112
4.5	Gene set analysis	115
4.6	Analysis of biological networks	117
4.6.1	Network topology	120
4.6.2	Identification of active subnetworks	122
4.7	Summary	129

4.8	Further reading	130
5.	Dynamic modeling technologies	131
5.1	Equation-based approaches	131
5.1.1	Differential equations	131
5.1.2	Difference equations	148
5.2	Rewriting systems	149
5.2.1	Chemical reactions	152
5.2.2	P-systems and membrane computing	161
5.3	Network-based approaches	163
5.3.1	Boolean networks	163
5.3.2	Petri nets	166
5.4	Automata-based approaches	173
5.4.1	Cellular automata	174
5.4.2	Hybrid automata	175
5.5	Relationship between continuous and stochastic models	176
5.6	Diagrammatic modeling	177
5.6.1	Elements	179
5.6.2	Reactions	181
5.7	Summary	184
5.8	Further reading	184
6.	Language-based modeling	187
6.1	Process calculi	187
6.1.1	First generation	192
6.1.2	Second generation of calculi for biology	197
6.2	Third generation: from calculi to modeling languages	205
6.2.1	BlenX	207
6.3	Self-assembly	222
6.3.1	Filaments	226
6.3.2	Trees	227
6.3.3	Introducing controls	229
6.3.4	Rings	241
6.4	An evolutionary framework	249
6.4.1	Mutations	251
6.4.2	A case study: MAPK	256
6.5	Domain-specific languages	261
6.5.1	ℓ design	262

6.5.2	ℓ intuition	265
6.5.3	ℓ definition	268
6.5.4	Relationships with other formalisms	275
6.6	Summary	279
6.7	Further reading	279
7.	Dynamic modeling process	281
7.1	Setting the objectives and the acceptance criteria	282
7.2	Building the knowledge base	284
7.3	From the knowledge base to a model schema	290
7.4	From the model schema to a concrete model	297
7.5	Model calibration, evaluation and refinement	299
7.6	Summary	299
7.7	Further reading	300
8.	Simulation	301
8.1	Model execution	302
8.2	Random number generation	306
8.2.1	Uniform random number generators	307
8.2.2	General random number generators	310
8.3	Stochastic simulation algorithms	311
8.3.1	Direct method	311
8.3.2	Some SSA variants	315
8.3.3	SSA-based reaction-diffusion	322
8.3.4	The τ -leaping approximation	323
8.3.5	Language-based simulation	324
8.4	Summary	327
8.5	Further reading	327
9.	Perspectives and conclusions	329
Appendix A	Basic math	333
A.1	Sets, relations and functions	333
A.2	Logics	336
A.3	Algebra	340
Appendix B	Probability and statistics	345
B.1	Probability	345

B.2	Random variables	346
B.2.1	Useful random variables	347
B.2.2	Joint random variables	351
B.2.3	Some important results	352
B.2.4	Some useful integer random variables	354
B.3	Statistics	355
B.3.1	Sample measures	355
B.3.2	Basic data visualization	356
B.3.3	Hypothesis testing	358
Appendix C	Semantics of modeling languages	363
C.1	Languages and grammars	363
C.2	Structural operational semantics	365
C.2.1	Transition systems	365
C.2.2	Structural operational semantic definitions	368
C.3	The π -calculus and its stochastic extension	371
C.4	β -binders	374
C.5	BlenX	378
C.6	ℓ	384
C.6.1	Basic notions	384
C.6.2	Semantics of commands and expressions	385
C.6.3	Syntactic desugaring	387
C.6.4	Semantics of rules	389
	<i>Bibliography</i>	393
	<i>Index</i>	407
