Preface

xiii

SECTION I INTRODUCTION

1. Principles of Bioadhesion	3
<i>John D. Smart</i>	
1.1 Introduction	4
1.2 The Principles of Adhesion	4
1.2.1 Theories of Adhesion	5
1.2.2 Forming the Adhesive Joint	7
1.2.2.1 Contact stage	7
1.2.2.2 The consolidation stage	8
1.3 Examples of Bioadhesion	8
1.3.1 Cell-to-Cell Adhesion	8
1.3.1.1 Cadherins	9
1.3.1.2 Immunoglobulins	9
1.3.1.3 Selectins	9
1.3.1.4 Integrins	10
1.3.2 Mucoadhesion	10
1.3.3 Other Medical Bioadhesives	14
1.3.3.1 Skin adhesives	14
1.3.3.2 Tissue sealants	14
1.3.3.3 Dental adhesives and cements	15
1.3.3.4 Bone cements and bone graft substitutes	16
1.4 Other Bioadhesives	16
1.5 Conclusion	17

2. Characterization of Bioadhesion 23

*Thakur Raghu Raj Singh, David S. Jones, Gavin P. Andrews,
and Ravi Sheshala*

2.1	Introduction	24
2.2	Methods of Bio-/Mucoadhesion Characterization	25
2.2.1	In vitro Testing	26
2.2.1.1	Methods measuring the force of detachment	26
2.2.1.2	Rheological measurement of mucoadhesion	31
2.2.1.3	Flow-through or falling liquid film method	34
2.2.1.4	Imaging techniques	35
2.2.1.5	Other in vitro tests	37
2.2.2	In vivo studies	41
2.3	Conclusion	42

SECTION II NATURAL ADHESIVES

3. Mussel Adhesives 49

*Hongbo Zeng, Qingye Lu, Bin Yan, Jun Huang, Lin Li,
and Zhi Liao*

3.1	Introduction	49
3.2	Mussel Adhesive System	50
3.2.1	Mussel Byssus	50
3.2.2	Biochemistry of Mussel Byssus	52
3.3	Understanding Interactions of Mussel Foot Proteins	54
3.3.1	Techniques for Studying Molecular Interactions of Mussel Foot Proteins	54
3.3.1.1	General surface analytical techniques	55
3.3.1.2	Atomic force microscopy	56
3.3.1.3	Surface forces apparatus	57
3.3.2	Protein-Substratum Interactions	60

3.3.2.1	Interaction between mussel foot proteins and mica	60
3.3.2.2	Interaction between mussel foot proteins and silica	62
3.3.2.3	Interaction between mussel foot proteins and TiO ₂ /metal	62
3.3.2.4	Interaction between mussel foot proteins and polymers	63
3.4	Protein-Protein Interactions in Byssal Plaque	64
3.4.1	The Interaction of Mussel Foot Protein 1 (mfp-1) in the Cuticle	64
3.4.1.1	Interactions between foot proteins in the plaque	66
3.5	Mussel-Inspired Materials	68
3.6	Adhesive/Sealants	69
3.7	Functional Coating	72
3.8	Conclusions	73
4.	Gecko Adhesion	85
	<i>Joseph C. Cremaldi, Kejia Jin, and Noshir S. Pesika</i>	
4.1	Introduction	86
4.2	The Gecko Pad	87
4.2.1	Hierarchical Tiers	87
4.2.2	Van der Waals Forces	88
4.2.3	Roughness Considerations	90
4.2.4	Force Generation and the Autumn Experiment	91
4.2.5	Force Results	91
4.2.6	Comparison with Whole Pad and Single Spatula Measurements	93
4.3	Attachment and Detachment	93
4.3.1	The Peel-Zone Model	95
4.3.2	Peel Modes	97
4.4	Self-Cleaning Mechanism	98
4.5	Non-Adhesive Unloaded State and Non-Self-Adherence	100

4.6	Substrates and the Environment	101
4.7	Conclusion	103
5.	From Sand Tube to Test Tube: The Adhesive Secretion from Sabellariid Tubeworms	109
	<i>Elise Hennebert, Barbara Maldonado, Cécile Van De Weerd, Mélanie Demeuldre, Katharina Richter, Klaus Rischka, Patrick Flammang</i>	
5.1	Introduction	110
5.2	Characterization of the Natural Adhesive System	111
5.2.1	Morphology of the Adhesive Cells	111
5.2.2	Morphology and Mechanics of the Cement	113
5.2.3	Cement Composition and Formation	115
5.3	Bio-Inspired Adhesive Polymers: Production, Characterization and Applications	118
5.3.1	Recombinant Proteins	119
5.3.2	Synthetic Peptides	120
5.3.3	Polymers	122
	SECTION III BIOMIMETIC ADHESIVES	
6.	Adhesives and Coatings Inspired by Mussel Adhesive Proteins	131
	<i>Hao Meng, Yuan Liu, Morgan M. Cencer, and Bruce P. Lee</i>	
6.1	Introduction	131
6.2	Chemistry of DOPA Side Chain	133
6.2.1	Reversible Interactions	134
6.2.2	Covalent Bond Formation	135
6.3	Architectures of Synthetic Adhesive Polymers	136
6.3.1	Main Chain Functionalization	136
6.3.2	End Group Functionalization	137
6.4	Bioinspired Synthetic Adhesives	138
6.4.1	Injectable Tissue Adhesive	138
6.4.2	Nanocomposite Adhesive Hydrogel	140
6.4.3	Thin-Film Adhesive	142

6.4.4	Hybrid Gecko- and Mussel-Inspired Adhesive	143
6.5	Mussel-Inspired Antifouling Coatings	144
6.5.1	Graft-to Coating Method	145
6.5.2	Graft-From Coating Method	146
6.6	Polydopamine as a Versatile Multifunctional Anchoring Group	147
6.6.1	Polydopamine-Mediated Surface Modification	149
6.6.2	Metallization and Metal Ion Reduction	150
6.6.3	Polydopamine Capsule	150
6.7	Summary and Future Outlook	151
7.	Algal Glue Mimetics	167
	<i>Ronit Bitton</i>	
7.1	Introduction	167
7.2	Algal Glue	168
7.2.1	Green Algae	168
7.2.2	Brown Algae	169
7.3	Biomimetic Algal Glue	172
8.	Bio-Inspired Surfaces with Directional Adhesion	181
	<i>Luciano Afferrante</i>	
8.1	Introduction	181
8.2	Energy Release Rate	186
8.2.1	Detachment Occurring Perpendicularly to the Microwalls	186
8.2.2	Detachment Occurring Obliquely to the Microwalls	190
8.3	The Critical Moment for Detachment	190
8.3.1	Detachment Occurring Perpendicularly to the Microwalls	190
8.3.2	Detachment Occurring Obliquely to the Microwalls	194
8.4	Conclusions	195

SECTION IV MEDICAL APPLICATIONS

9. Bioadhesives as Surgical Sealants: A Review	203
<i>Leslie John Ray Foster</i>	
9.1 Introduction	203
9.2 Commercial Sealants	205
9.3 Fibrin-Based Sealants	206
9.3.1 Principles	206
9.3.2 Commercial Fibrin Sealants	207
9.3.3 Research and Development	208
9.4 Collagen-Based Sealants	209
9.4.1 Principles	209
9.4.2 Commercial Collagen Sealants	210
9.4.3 Research and Development	211
9.5 Gelatine-Based Sealants	211
9.5.1 Principles	211
9.5.2 Commercial Gelatine Sealants	212
9.5.3 Research and Development	213
9.6 Albumin-Based Sealants	214
9.6.1 Principles	214
9.6.2 Commercial Albumin Sealants	214
9.6.3 Research and Development	215
9.7 Chitosan-Based Sealants	216
9.7.1 Principles	216
9.7.2 Commercial Chitosan Sealants	217
9.7.3 Research and Development	217
9.8 Cellulose-Based Sealants	218
9.8.1 Principles	218
9.8.2 Commercial Cellulose Sealants	219
9.8.3 Research and Development	219
9.9 Summary and Future Trends	220
10. Bioadhesive Systems for Drug Delivery	235
<i>Ryan F. Donnelly and A. David Woolfson</i>	
10.1 Introduction	236

10.2	Routes of Administration for Bio- and Mucoadhesive Drug Delivery Systems	237
10.3	Mucoadhesive Polymers	239
10.4	Factors Affecting Mucoadhesion	242
10.4.1	Hydrophilicity	242
10.4.2	Molecular Weight	243
10.4.3	Cross-Linking and Swelling	243
10.4.4	Spatial Conformation	243
10.4.5	pH	244
10.4.6	Concentration of Active Polymer	244
10.4.7	Drug/Excipient Concentration	244
10.4.8	Other Factors Affecting Mucoadhesion	245
10.5	Delivery Systems	245
10.5.1	Oral Mucoadhesive Delivery Systems	245
10.5.2	Nasal Mucoadhesive Delivery Systems	248
10.5.3	Ocular Mucoadhesive Delivery Systems	250
10.5.4	Vaginal Mucoadhesive Delivery Systems	252
10.5.5	Rectal Mucoadhesive Delivery Systems	253
10.5.6	Cervical and Vulval Delivery Systems	254
10.5.7	Gastrointestinal Mucoadhesive Delivery Systems	255
10.6	Methods of Determining Mucoadhesion	256
10.6.1	Determination of Mucoadhesion in Polymer Gel Systems	256
10.6.2	Determination of Mucoadhesion in Film Systems	258
10.6.3	Tensile and Shear Tests	258
10.6.4	Peel Strength	259
10.7	Conclusion	260

11. Preventing Adhesion on Medical Devices	269
<i>Pilar Teixeira and Fernanda Gomes</i>	
11.2 Adhesion and Biofilm Formation on Medical Devices	271
11.3 Strategies to Prevent Adhesion on Medical Devices	273
11.3.1 Current Recommendations	273
11.3.2 Emergent Approaches	274
11.3.2.1 Surface topography modification	274
11.3.2.2 Surface coatings	275
11.3.2.3 Drug-delivery coatings	277
11.3.2.4 Antimicrobial peptides	278
11.3.2.5 Quorum-sensing molecules	279
11.3.2.6 Nanoparticles	280
11.3.2.7 Bacteriophages	281
11.3.2.8 Natural compounds	283
11.3.2.9 Electrical methods	284
11.4 Conclusions	285
<i>Index</i>	295
