

Contents

1	Introduction	1
1.1	Problem Statement	1
1.2	Existing Work	3
1.2.1	Modeling of Closed Chain Mechanisms	3
1.2.2	Applications Of Artificial Neural Networks in Robotics	4
1.2.3	Dual Quaternion Coordinates	6
1.3	Outline of Work	6
2	Cooperating Manipulator Modeling	10
2.1	Kinematics	10
2.1.1	Forward Kinematics	11
2.1.2	Inverse Kinematics	13
2.1.3	Jacobian and its Time-Derivative	13
2.2	Dynamics	15
2.2.1	Forward Dynamics	17
2.2.2	Inverse Dynamics and Control Algorithm	26
2.3	Simulation	28
2.3.1	Software	29
2.4	Experiment	31
2.4.1	Friction Compensation	31
2.4.2	Implementation	32
2.4.2.1	Hardware	32
2.4.2.2	Software	35
2.5	Results	36

3	Dynamics Modeling Using Constraint Equations	39
3.1	Generalized Formulation of Cooperating Manipulator Dynamics . . .	39
3.1.1	Two PUMA 560 Manipulators Rigidly Grasping a Common Object	42
3.2	Rolling Constraints	48
3.2.1	Planar Rolling	48
4	Neural Network Assisted Assembly	56
4.1	Assembly Task Description	56
4.2	A Survey of Some Neural Network Methods	58
4.2.1	Multilayered Perceptron Network	60
4.2.2	Extended Kohonen Map	63
4.2.2.1	Forward Computations	63
4.2.2.2	Gradient Descent Optimization	64
4.2.2.3	Method of Ritter et al.	65
4.2.3	Numerical Results and Discussion	66
4.2.3.1	Numerical Study	66
4.2.3.2	Discussion	67
4.3	Peg-in-the-Hole Insertion	69
4.3.1	Neural Network Hybrid Position/Force Control	69
4.3.2	Experimental Implementation	72
4.3.3	Results	73
4.4	Parts Mating Using Cooperating Manipulators	74
4.4.1	Experimental Implementation and Results	77
5	Trajectory Generation and Force Control Using Dual Quaternion Coordinates	80
5.1	Joint Space Interpolation	80
5.2	Cartesian Space Interpolation	83
5.3	Dual Quaternion Interpolation	87
5.4	Force Control in the Image Space	90
5.5	Experiment	93

6	Conclusions	97
6.1	Contributions	97
6.2	Future Research	99
A	Kinematics and Dynamics Expressions	100
A.1	Forward Kinematics	100
A.2	Inverse Kinematics	101
A.3	Jacobian and its Time-Derivative	104
A.4	Forward and Inverse Dynamics Parameters	107
