<i>About the Editor-in-Chief</i>	xi
<i>List of Contributors</i>	xiii
<b>Chapter 1. Introduction</b>	<b>1</b>
<i>Mieczysław E. Poniewski</i>	
<b>Part A — Micro-Structured Surfaces</b>	<b>7</b>
<b>Chapter 2. Enhanced Pool Boiling Heat Transfer on Novel Combined Micro-Structured Surfaces</b>	<b>9</b>
<i>Robert Pastuszko and Mieczysław E. Poniewski</i>	
1. Introduction . . . . .	10
2. Design and Characteristic Features . . . . .	10
2.1. Surfaces enhancing boiling heat transfer — literature review . . .	10
2.2. Surfaces developed by the authors . . . . .	12
2.2.1. Tunnel structure (TS) surfaces . . . . .	12
2.2.2. Narrow tunnel surfaces (NTS) . . . . .	13
2.2.3. Narrow tunnel structure with low fins (NTS-L) . . . . .	14
2.3. The measurement stand . . . . .	15
3. Heat Transfer Data and Boiling Process Visualization . . . . .	19
3.1. Boiling curves . . . . .	19
3.2. Comparison of results in non-dimensional form . . . . .	20
3.2.1. Bond number . . . . .	20
3.2.2. Generalized results . . . . .	21
3.3. Visualization . . . . .	22

4.	Critical Analysis of Various Boiling Heat Transfer Models . . . . .	24
4.1.	Suction–evaporation mode models with assumed evaporation on tunnel menisci . . . . .	24
4.2.	Flooded mode models with assumed evaporation inside tunnels . . . . .	26
4.3.	The models of continuous liquid inflow and vapor removal . . .	27
4.4.	Boiling models review . . . . .	28
5.	Boiling Models Developed by the Authors . . . . .	29
5.1.	Model of tunnel structure surface . . . . .	29
5.1.1.	Liquid volume during the periods of waiting and growth . . . . .	30
5.1.2.	Heat flux for vertical tunnel . . . . .	30
5.1.3.	Departing bubble frequency and nucleation site density . . . . .	32
5.1.4.	External and total heat flux . . . . .	32
5.2.	Simplified model of surface with narrow tunnel structure (NTS) . . . . .	33
6.	Conclusions . . . . .	37

### **Chapter 3. Hysteresis Phenomena in Pool Boiling on Micro-Structured Surfaces 39**

*Tadeusz M. Wójcik and Mieczysław E. Poniewski*

1.	Introduction . . . . .	40
2.	Boiling Heat Transfer Hysteresis . . . . .	42
3.	Kinds of Boiling Hysteresis . . . . .	44
3.1.	Nucleation hysteresis . . . . .	45
3.2.	I kind of hysteresis . . . . .	47
3.3.	II kind of hysteresis . . . . .	49
3.4.	III kind of hysteresis . . . . .	52
4.	Physical Mechanisms of Hysteresis Phenomena on Metal Fibrous Surfaces . . . . .	52
5.	Model of II Kind of Hysteresis — Description and Validation . . . . .	57
5.1.	Model of boiling heat transfer for small heat fluxes . . . . .	57
5.2.	The study of bubble dynamics . . . . .	59
5.3.	Model of boiling inside a porous structure . . . . .	62
6.	II Kind of Hysteresis — Application to Heat Transfer Control . . . . .	66
7.	Summary . . . . .	68

### **Nomenclature 71**

## **Part B — Minichannels** **73**

### **Chapter 4. Flow Boiling in Minichannels** **75**

*Robert Kaniowski, Magdalena Piasecka and Mieczysław E. Poniewski*

1. State-of-the-Art and Evaluation of Channel Classification in Heat Transfer Engineering . . . . .	76
2. Experimental Stand and Methodology . . . . .	78
2.1. Experimental stand . . . . .	78
2.1.1. Flow loop . . . . .	78
2.1.2. The measurement modules . . . . .	78
2.1.3. Data and image acquisition systems . . . . .	81
2.2. Experimental methodology and techniques . . . . .	82
2.2.1. Experimental procedure . . . . .	82
2.2.2. Liquid crystals thermography . . . . .	82
3. Experimental Results, Measurement Errors . . . . .	85
3.1. Heat transfer coefficient . . . . .	85
3.2. Boiling incipience and nucleation hysteresis . . . . .	87
3.3. Boiling curves . . . . .	89
3.4. Assessment of measurement accuracy of selected parameters . . . . .	91
3.4.1. Foil temperature . . . . .	91
3.4.2. Volumetric heat flux . . . . .	93
3.4.3. Other parameters and the boundary conditions . . . . .	94
3.5. Void fraction measurements . . . . .	94
4. The Impact of Heat Flux, Pressure and Mass Flux on the Heat Transfer Coefficient . . . . .	101
5. Heat Transfer Coefficient Correlations . . . . .	102
5.1. Correlation for saturated flow . . . . .	102
5.2. Correlation for boiling incipience . . . . .	103
6. Conclusions . . . . .	104
Acknowledgments . . . . .	105

### **Chapter 5. Heat Transfer and Pressure Drop in Minichannels with a Microstructured Surface and Various Spatial Orientations** **107**

*Magdalena Piasecka and Mieczysław E. Poniewski*

1. Introduction . . . . .	108
---------------------------	-----

2.	State-of-the-Art Application of Microstructured Heating Surfaces to Boiling Heat Transfer in Minichannels . . . . .	108
3.	Experimental Setup and Methodology . . . . .	110
3.1.	Experimental setup . . . . .	110
3.2.	Characteristics of microstructured heating surfaces . . . . .	111
3.3.	Experimental methodology . . . . .	114
3.4.	Measurement errors . . . . .	114
3.4.1.	The accuracy of selected parameters . . . . .	114
3.4.2.	Error of the void fraction measurement . . . . .	114
4.	Results and Discussion . . . . .	116
4.1.	Heating surface, fluid and saturation temperatures . . . . .	116
4.1.1.	Local heat transfer coefficient . . . . .	116
4.1.2.	Heat transfer analysis on the basis of experimental data . . . . .	116
4.1.3.	Boiling curves for smooth and microstructured surface channels . . . . .	120
4.2.	Void fraction and vapor quality . . . . .	120
4.3.	Flow patterns . . . . .	122
4.4.	Two-phase flow pressure drop . . . . .	126
5.	Conclusions . . . . .	129
	Acknowledgments . . . . .	130

## **Chapter 6. Numerical Analysis of Boiling Two-Phase Flow in Mini- and Microchannels** **131**

*Sylvia Hożejowska, Beata Maciejewska and Mieczysław E. Poniewski*

1.	Introduction . . . . .	132
2.	Trefftz Functions . . . . .	132
2.1.	Trefftz functions for the Laplace equation . . . . .	132
2.2.	Trefftz functions for the energy equation . . . . .	133
3.	Solving Direct and Inverse Heat Transfer Problems in Flow Boiling in Mini- and Microchannels Using Numerical Methods Based on the Trefftz Functions . . . . .	135
3.1.	Mathematical model of flow boiling in mini- and microchannels . . . . .	135
3.2.	The Trefftz method and its modifications . . . . .	138
3.2.1.	Results of calculations for a single phase flow with boiling incipience . . . . .	143
3.2.2.	Results of calculations for the two-phase flow . . . . .	147
3.3.	The nodeless Trefftz method . . . . .	149

3.4. The finite element method in conjunction with the Trefftz functions (FEMT) . . . . .	151
3.5. The sensitivity coefficients method combined with Trefftz functions . . . . .	156
4. Conclusions . . . . .	158
Acknowledgment . . . . .	160
