# Summary

**Combustion in the spark-ignition engine** 4
Spark-ignition engine, engine design, operating conditions, fuels

**Emissions-control technology** 16
Exhaust-gas constituents, exhaust-gas treatment, testing exhaust and evaporative emissions

**Mixture formation** 36
Overview, air supply, fuel supply, KE-Jetronic, L-Jetronic, Mono-Jetronic

**Ignition** 142
Overview, coil ignition, transistorized ignition, semiconductor ignition, distributorless ignition, knock control, connecting elements, ignition-system testing

**Spark plugs** 180
Stress factors, construction, heat range, spark-plug selection, operating behavior, types, practice

**Motronic engine management** 206
System overview, fuel system, high-voltage ignition circuit, operating-data acquisition and processing, operating conditions, integrated diagnosis, ECU, system interfaces, Mono-Jetronic

**Vehicle electrical system** 260
Power supply, symbols and circuit diagrams, calculation of conductor sizes

**Electromagnetic compatibility (EMC) and interference suppression** 286
EMC, interference suppression

**Starter batteries** 298
Summary, battery versions, battery states, battery maintenance, safety precautions, battery chargers

**Alternators** 304
Basic principles, alternator and voltage-regulator versions, overvoltage-protection devices, power losses, characteristic curves, cooling and noise, alternator circuitry, operation in the vehicle

**Starting systems** 346
Basic principles, basic design, starter types, installation, operation and maintenance

**Index of headings** 376
