Preface	xi
Introduction	xiii
Chapter 1. Operators on Graphs. Quantum graphs	1
1.1. Main graph notions and notation	2
1.2. Difference operators. Discrete Laplace operators	5
1.3. Metric graphs	7
1.4. Differential operators on metric graphs. Quantum graphs	12
1.4.1. Vertex conditions. Finite graphs.	15
1.4.2. Scale invariance	22
1.4.3. Quadratic form	22
1.4.4. Examples of vertex conditions	24
1.4.5. Infinite graphs	27
1.4.6. Non-local vertex conditions	32
1.5. Further remarks and references	33
Chapter 2. Quantum Graph Operators. Special Topics	37
2.1. Quantum graphs and scattering matrices	37
2.1.1. Scattering on vertices	37
2.1.2. Bond scattering matrix and the secular equation	41
2.2. First order operators and scattering matrices	44
2.3. Factorization of quantum graph Hamiltonians	51
2.4. Index of quantum graph operators	52
2.5. Dependence on vertex conditions	54
2.5.1. Variations in the edge lengths	58
2.6. Magnetic Schrödinger operator	59
2.7. Further remarks and references	62
Chapter 3. Spectra of Quantum Graphs	65
3.1. Basic spectral properties of compact quantum graphs	66
3.1.1. Discreteness of the spectrum	66
3.1.2. Dependence on the vertex conditions	67
3.1.3. Eigenfunction dependence	68
3.1.4. An Hadamard-type formula	-

3.1.5.	Generic simplicity of the spectrum	71
3.1.6.	Eigenvalue bracketing	72
3.1.7.	Dependence on the coupling constant at a vertex	76
3.2.	The Shnol' theorem	79
3.3.	Generalized eigenfunctions	82
3.4.	Failure of the unique continuation property. Scars	84
3.5.	The ubiquitous Dirichlet-to-Neumann map	85
3.5.1.	DtN map for a single edge	85
3.5.2.	DtN map for a compact graph with a "boundary"	87
3.5.3.	DtN map for a single vertex boundary	89
3.5.4.	DtN map and the secular equation	89
3.5.5.	DtN map and number of negative eigenvalues	90
3.6.	Relations between quantum and discrete graph spectra	90
3.7.	Trace formulas	92
3.7.1.	Secular equation	93
3.7.2.	Weyl's law	95
3.7.3.	Derivation of the trace formula	96
3.7.4.	Expansion in terms of periodic orbits	99
3.7.5.	Other formulations of the trace formula	100
3.8.	Further remarks and references	101
Chapter 4. Spectra of Periodic Graphs		105
4.1.	Periodic graphs	105
4.2.	Floquet-Bloch theory	107
4.2.1.	Floquet transform on combinatorial periodic graphs	109
4.2.2.	Floquet transform of periodic difference operators	112
4.2.3.	Floquet transform on quantum periodic graphs	113
4.2.4.	Floquet transform of periodic operators	114
4.3.	Band-gap structure of spectrum	115
4.3.1.	Discrete case	115
4.3.2.	Quantum graph case	116
4.3.3.	Floquet transform in Sobolev classes	117
4.4.	Absence of the singular continuous spectrum	117
4.5.	The point spectrum	118
4.6.	Where do the spectral edges occur?	121
4.7.	Existence and location of spectral gaps	123
4.8.	Impurity spectra	124
4.9.	Further remarks and references	124
Chapter 5. Spectra of Quantum Graphs. Special Topics		129
5.1.	Resonant gap opening	129
5.1.1.	"Spider" decorations	133

5.2. Zeros of eigenfunctions and nodal domains	134
5.2.1. Some basic results	137
5.2.2. Bounds on the nodal count	138
5.2.3. Nodal count for special types of graphs	142
5.2.4. Nodal deficiency and Morse indices	143
5.3. Spectral determinants of quantum graphs	148
5.4. Scattering on quantum graphs	150
5.5. Further remarks and references	153
 Chapter 6. Quantum Chaos on Graphs	 157
6.1. Classical “motion” on graphs	158
6.2. Spectral statistics and random matrix theory	159
6.2.1. Form factor of a unitary matrix	161
6.2.2. Random matrices	162
6.3. Spectral statistics of graphs	164
6.4. Periodic orbit expansions	167
6.4.1. On time-reversal invariance	170
6.4.2. Diagonal approximation	170
6.4.3. The simplest example of an off-diagonal term	173
6.5. Further remarks and references	179
 Chapter 7. Some Applications and Generalizations	 181
7.1. Inverse problems	181
7.1.1. Can one hear the shape of a quantum graph?	183
7.1.2. Quantum graph isospectrality	184
7.1.3. Can one count the shape of a graph?	185
7.1.4. Inverse scattering	185
7.1.5. Discrete “electrical impedance” problem	185
7.2. Other types of equations on metric graphs	186
7.2.1. Heat equation	186
7.2.2. Wave equation	186
7.2.3. Control theory	186
7.2.4. Reaction-diffusion equations	187
7.2.5. Dirac and Rashba operators	187
7.2.6. Pseudo-differential Hamiltonians	187
7.2.7. Non-linear Schrödinger equation (NLS)	188
7.3. Analysis on fractals	188
7.4. Equations on multistructures	188
7.5. Graph models of thin structures	188
7.5.1. Neumann tubes	190
7.5.2. Dirichlet tubes	192
7.5.3. “Leaky” structures	194

7.6.	Quantum graph modeling of various physical phenomena	200
7.6.1.	Simulation of quantum graphs by microwave networks	200
7.6.2.	Realizability questions	200
7.6.3.	Spectra of graphene and carbon nanotubes	201
7.6.4.	Vacuum energy and Casimir effect	205
7.6.5.	Anderson localization	207
7.6.6.	Bose-Einstein condensates	207
7.6.7.	Quantum Hall effect	207
7.6.8.	Flat band phenomena and slowing down light	208
Appendix A.	Some Notions of Graph Theory	209
A.1.	Graph, edge, vertex, degree	209
A.2.	Some special graphs	210
A.3.	Graphs and digraphs	210
A.4.	Paths, closed paths, Betti number	211
A.5.	Periodic graph	211
A.6.	Cayley graphs and Schreier graphs	212
Appendix B.	Linear Operators and Operator-Functions	213
B.1.	Some notation concerning linear operators	213
B.2.	Fredholm and semi-Fredholm operators. Fredholm index	213
B.3.	Analytic Fredholm operator functions	215
B.3.1.	Some notions from the several complex variables theory	215
B.3.2.	Analytic Fredholm operator functions	216
Appendix C.	Structure of Spectra	219
C.1.	Classification of the points of the spectrum	220
C.2.	Spectral theorem and spectrum classification	220
Appendix D.	Symplectic Geometry and Extension Theory	223
	Bibliography	227
	Index	267
