

TABLE OF CONTENTS

Translator's Note	v
<i>P. V. Tavanec and V. S. Švyrev</i> , The Logic of Scientific Knowledge	1
<i>V. A. Smirnov</i> , Levels of Knowledge and Stages in the Process of Knowledge	22
I. Differences Between the Problems, 'Sensation-Thought' and 'Empirical-Theoretical'	22
II. Basis of the Division of the Sentences of the Language of Science into Levels	23
III. The Semantic System: Admissible Objects of Thought and Modes of Expression	26
IV. Empirical and Theoretical Objects of Science	29
V. Sentences Which Express Facts and Sentences Which Formulate Laws	33
VI. Stages in the Process of Knowledge	41
1. Observation	42
2. Analysis of observation protocols and discovery of empirical connections	45
3. Prediction by means of facts and empirical connections	47
VII. Types of Explanation of Empirical Connections	48
VIII. Stages in the Process of Knowledge, II	50
4. Elaboration of the basic ideas and discovery of the fundamental relations, basic to explanation: formation of scientific theory	50
5. Deduction of some theoretical laws from other theoretical laws: development of theory	50
6. Explanation of scientific facts, i.e., discovery through empirical relations of corresponding theoretical models	51
7. The discovery of empirical connections through theoretical descriptions	51

<i>V. S. Švyrev</i> , Problems of the Logical-Methodological Analysis of Relations Between the Theoretical and Empirical Planes of Scientific Knowledge	55
I. The Traditional Inductivist Approach to the Problem of the Relations Between Theoretical and Empirical Knowledge and its Limitations	57
II. Critique of the Neopositivist Approach to the Analysis of the Relations Between the Theoretical and Empirical Levels of Scientific Knowledge	64
III. Contemporary Logic of Science on the Relations Between Theoretical and Empirical Knowledge: The Connection of the Theoretical and Empirical Levels of Knowledge in the Structure of Hypothetical-Deductive Theory	69
IV. Contemporary Logic of Science on the Relations Between Empirical and Theoretical Knowledge: The Problem of the Establishment of Logical Correspondence Between Theoretical and Empirical Knowledge	79
<i>A. A. Zinov'ev</i> , Logical and Physical Implication	91
<i>V. N. Sadovskij</i> , The Deductive Method as a Problem of the Logic of Science	160
I. Introduction	160
II. Deduction and Deductive Inference	164
III. Deductive System and Deductive Theory	175
IV. Types of Deductive Systems	186
V. Problems of the Logical-Epistemological Analysis of the Deductive Sphere of Knowledge	199
<i>G. I. Ruzavin</i> , Probability Logic and its Role in Scientific Research	212
I. Introduction	212
II. Systems of Probability Logic	217
1. Various interpretations of the notion of probability	217
2. Systems of probability logic, based on the frequency interpretation of probability	221
3. Systems of probability logic which consider probability as some sort of logical relation between propositions	231

III.	Probability Logic and Statistical Inference	245
IV.	Probability Logic and the Problem of the Selection of Hypotheses	255
V.	Probability Logic and the Problem of Confirmation of Hypotheses	258
<i>A. I. Uemov,</i>	<i>The Basic Forms and Rules of Inference by Analogy</i>	266
I.	The General Schema of Inferences by Analogy	266
II.	Traditional Analogy	273
III.	Causal and Substantial Analogy	283
IV.	Analogy of Consequence	291
V.	Analogy of Correlation	297
VI.	Functional-Structural and Structural-Functional Analogy	305
<i>D. P. Gorskij,</i>	<i>On the Types of Definition and Their Importance for Science</i>	312
I.	Preliminary Remarks	313
II.	Types of Definition	315
III.	The Problem of Definitions in Formal Systems	348
IV.	On the Importance of Definitions in Science	365
<i>A. L. Subbotin,</i>	<i>Idealization as a Method of Scientific Knowledge</i>	376
I.	The Abstraction of Identity	376
II.	Idealization	381
III.	Some Methodological Considerations	387
<i>A. N. Rakitov,</i>	<i>The Statistical Interpretation of Fact and the Role of Statistical Methods in the Structure of Empirical Knowledge</i>	394
I.	The Nature of Empirical Knowledge and the Principle of Verification	395
1.	The schema of the process of verification	396
2.	Substitution of the confirmation principle for the principle of verification	398
3.	The principle of complete verifiability	399
4.	Data of a single observation and the cardinal relation	400
5.	The transition from data to statistical resumé	403
6.	The fact of science	405

7.	The fact and the cardinal relation	406
8.	Summary	408
II.	The Statistical Nature of the Object and the Structure of the Construction of Empirical Knowledge	409
1.	The object and objective object of investigation	409
2.	The statistical nature of the empirical object	411
3.	The components of the structure	413
4.	The empirical situation and the single datum	413
5.	Conditions for obtaining $\mathbb{D}_i = \partial_i$	414
6.	Control-experiments	415
7.	Investigation of the statistical nature of the set-up	416
8.	Example of an experiment	418
9.	The method of statistical modelling	419
10.	The statistical nature of the so-called single observation	421
	Index of Names	427
