Preface	vii
Introduction	1
Notation and conventions	13
1 Preliminaries on Lie groups	15
1.1 Lie groups, representations, and Fourier transform	15
1.2 Lie algebras and vector fields	22
1.3 Universal enveloping algebra and differential operators	24
1.4 Distributions and Schwartz kernel theorem	29
1.5 Convolutions	30
1.6 Nilpotent Lie groups and algebras	34
1.7 Smooth vectors and infinitesimal representations	37
1.8 Plancherel theorem	43
1.8.1 Orbit method	44
1.8.2 Plancherel theorem and group von Neumann algebras	46
1.8.3 Fields of operators acting on smooth vectors	52
2 Quantization on compact Lie groups	57
2.1 Fourier analysis on compact Lie groups	58
2.1.1 Characters and tensor products	58
2.1.2 Peter-Weyl theorem	60
2.1.3 Spaces of functions and distributions on G	63
2.1.4 ℓ^p -spaces on the unitary dual \widehat{G}	67
2.2 Pseudo-differential operators on compact Lie groups	71
2.2.1 Symbols and quantization	71
2.2.2 Difference operators and symbol classes	74
2.2.3 Symbolic calculus, ellipticity, hypoellipticity	78
2.2.4 Fourier multipliers and L^p -boundedness	82
2.2.5 Sharp Gårding inequality	88

3	Homogeneous Lie groups	91
3.1	Graded and homogeneous Lie groups	92
3.1.1	Definition and examples of graded Lie groups	92
3.1.2	Definition and examples of homogeneous Lie groups	94
3.1.3	Homogeneous structure	100
3.1.4	Polynomials	103
3.1.5	Invariant differential operators on homogeneous Lie groups	105
3.1.6	Homogeneous quasi-norms	109
3.1.7	Polar coordinates	116
3.1.8	Mean value theorem and Taylor expansion	119
3.1.9	Schwartz space and tempered distributions	125
3.1.10	Approximation of the identity	129
3.2	Operators on homogeneous Lie groups	132
3.2.1	Left-invariant operators on homogeneous Lie groups	132
3.2.2	Left-invariant homogeneous operators	136
3.2.3	Singular integral operators on homogeneous Lie groups	140
3.2.4	Principal value distribution	146
3.2.5	Operators of type $\nu = 0$	151
3.2.6	Properties of kernels of type ν , $\operatorname{Re} \nu \in [0, Q)$	154
3.2.7	Fundamental solutions of homogeneous differential operators	158
3.2.8	Liouville's theorem on homogeneous Lie groups	167
4	Rockland operators and Sobolev spaces	171
4.1	Rockland operators	172
4.1.1	Definition of Rockland operators	172
4.1.2	Examples of Rockland operators	174
4.1.3	Hypoellipticity and functional calculus	177
4.2	Positive Rockland operators	183
4.2.1	First properties	183
4.2.2	The heat semi-group and the heat kernel	185
4.2.3	Proof of the heat kernel theorem and its corollaries	187
4.3	Fractional powers of positive Rockland operators	198
4.3.1	Positive Rockland operators on L^p	198
4.3.2	Fractional powers of operators \mathcal{R}_p	203
4.3.3	Imaginary powers of \mathcal{R}_p and $I + \mathcal{R}_p$	206
4.3.4	Riesz and Bessel potentials	211
4.4	Sobolev spaces on graded Lie groups	218
4.4.1	(Inhomogeneous) Sobolev spaces	218
4.4.2	Interpolation between inhomogeneous Sobolev spaces	225
4.4.3	Homogeneous Sobolev spaces	228
4.4.4	Operators acting on Sobolev spaces	233
4.4.5	Independence in Rockland operators and integer orders	236
4.4.6	Sobolev embeddings	239
4.4.7	List of properties for the Sobolev spaces	245

4.4.8	Right invariant Rockland operators and Sobolev spaces . . .	249
4.5	Hulanicki's theorem	251
4.5.1	Statement	251
4.5.2	Proof of Hulanicki's theorem	252
4.5.3	Proof of Corollary 4.5.2	269
5	Quantization on graded Lie groups	271
5.1	Symbols and quantization	272
5.1.1	Fourier transform on Sobolev spaces	273
5.1.2	The spaces $\mathcal{K}_{a,b}(G)$, $\mathcal{L}_L(L_a^2(G), L_b^2(G))$, and $L_{a,b}^\infty(\widehat{G})$	285
5.1.3	Symbols and associated kernels	294
5.1.4	Quantization formula	296
5.2	Symbol classes $S_{\rho,\delta}^m$ and operator classes $\Psi_{\rho,\delta}^m$	300
5.2.1	Difference operators	300
5.2.2	Symbol classes $S_{\rho,\delta}^m$	306
5.2.3	Operator classes $\Psi_{\rho,\delta}^m$	309
5.2.4	First examples	313
5.2.5	First properties of symbol classes	316
5.3	Spectral multipliers in positive Rockland operators	319
5.3.1	Multipliers in one positive Rockland operator	319
5.3.2	Joint multipliers	327
5.4	Kernels of pseudo-differential operators	330
5.4.1	Estimates of the kernels	330
5.4.2	Smoothing operators and symbols	339
5.4.3	Pseudo-differential operators as limits of smoothing operators	341
5.4.4	Operators in Ψ^0 as singular integral operators	345
5.5	Symbolic calculus	351
5.5.1	Asymptotic sums of symbols	351
5.5.2	Composition of pseudo-differential operators	353
5.5.3	Adjoint of a pseudo-differential operator	364
5.5.4	Simplification of the definition of $S_{\rho,\delta}^m$	371
5.6	Amplitudes and amplitude operators	374
5.6.1	Definition and quantization	374
5.6.2	Amplitude classes	379
5.6.3	Properties of amplitude classes and kernels	381
5.6.4	Link between symbols and amplitudes	384
5.7	Calderón-Vaillancourt theorem	385
5.7.1	Analogue of the decomposition into unit cubes	387
5.7.2	Proof of the case $S_{0,0}^0$	389
5.7.3	A bilinear estimate	396
5.7.4	Proof of the case $S_{\rho,\rho}^0$	403
5.8	Parametrix, ellipticity and hypoellipticity	409
5.8.1	Ellipticity	410
5.8.2	Parametrix	417

5.8.3	Subelliptic estimates and hypoellipticity	423
6	Pseudo-differential operators on the Heisenberg group	427
6.1	Preliminaries	428
6.1.1	Descriptions of the Heisenberg group	428
6.1.2	Heisenberg Lie algebra and the stratified structure	430
6.2	Dual of the Heisenberg group	431
6.2.1	Schrödinger representations π_λ	432
6.2.2	Group Fourier transform on the Heisenberg group	433
6.2.3	Plancherel measure	441
6.3	Difference operators	443
6.3.1	Difference operators Δ_{x_j} and Δ_{y_j}	443
6.3.2	Difference operator Δ_t	447
6.3.3	Formulae	453
6.4	Shubin classes	455
6.4.1	Weyl-Hörmander calculus	455
6.4.2	Shubin classes $\Sigma_\rho^m(\mathbb{R}^n)$ and the harmonic oscillator	459
6.4.3	Shubin Sobolev spaces	461
6.4.4	The λ -Shubin classes $\Sigma_{\rho,\lambda}^m(\mathbb{R}^n)$	468
6.4.5	Commutator characterisation of λ -Shubin classes	473
6.5	Quantization and symbol classes $S_{\rho,\delta}^m$ on the Heisenberg group	475
6.5.1	Quantization on the Heisenberg group	475
6.5.2	An equivalent family of seminorms on $S_{\rho,\delta}^m = S_{\rho,\delta}^m(\mathbb{H}_n)$	477
6.5.3	Characterisation of $S_{\rho,\delta}^m(\mathbb{H}_n)$	478
6.6	Parametrices	481
6.6.1	Condition for ellipticity	481
6.6.2	Condition for hypoellipticity	483
6.6.3	Subelliptic estimates and hypoellipticity	486
A	Miscellaneous	491
A.1	General properties of hypoelliptic operators	491
A.2	Semi-groups of operators	493
A.3	Fractional powers of operators	495
A.4	Singular integrals (according to Coifman-Weiss)	499
A.5	Almost orthogonality	503
A.6	Interpolation of analytic families of operators	506
B	Group C^* and von Neumann algebras	509
B.1	Direct integral of Hilbert spaces	509
B.1.1	Convention: Hilbert spaces are assumed separable	509
B.1.2	Measurable fields of vectors	510
B.1.3	Direct integral of tensor products of Hilbert spaces	511
B.1.4	Separability of a direct integral of Hilbert spaces	514
B.1.5	Measurable fields of operators	515

B.1.6	Integral of representations	516
B.2	C^* - and von Neumann algebras	517
B.2.1	Generalities on algebras	517
B.2.2	C^* -algebras	520
B.2.3	Group C^* -algebras	521
B.2.4	Von Neumann algebras	524
B.2.5	Group von Neumann algebra	525
B.2.6	Decomposition of group von Neumann algebras and abstract Plancherel theorem	527
	Schrödinger representations and Weyl quantization	531
	Explicit symbolic calculus on the Heisenberg group	532
	List of quantizations	533
	Bibliography	535
	Index	553
