

CONTENTS

Preface	v
I. The Nature of Scientific Theory	1
Introduction	3
Reductionism	13
Mach: The Economy of Physical Theory.	15
Rankine: Abstractive and Hypothetical Theories	23
Mach: Explanation in Physics	29
Realism	35
Eddington: The Nature of the Physical World.	37
Heisenberg: Planck's Quantum Theory and the Philosophical Problems of Atomic Physics	45
Meyerson: Identity and Reality	59
Instrumentalism	71
Copernicus: The Role of Hypotheses	73
Newton: On Hypotheses	76
Duhem: The Aim and Structure of Physical Theory.	80
II. The Discovery and Justification of Scientific Theories	89
Introduction	91
The Classical Conception.	97
Herschel: Scientific Method.	99
Newton: Rules of Reasoning.	115
Problems of the Classical Conception	121
Mill: On Induction	123
Whewell: On Induction	132

Reformulation of the Classical Conception	141
Peirce: Retroduction and Genius	143
Hanson: The Logic of Discovery	150
Maxwell: The Role of Models in Physics	163
Duhem: Experiment in Physics	171
Popper: Conjectures and Refutations	178
III. Science and Mathematics	201
Introduction	203
Measurement	223
Stevens: On the Theory of Scales of Measurement	225
Duhem: Quantity and Quality	234
Arithmetic	249
Mill: Arithmetic as an Empirical Science	251
Poincaré: Intuition in Mathematics	266
Hempel: On the Nature of Mathematical Truth	276
Geometry	295
Kant: Geometry as the <i>A Priori</i> Science of Space	297
Poincaré: Conventionalism in Geometry	313
Reichenbach: The Nature of Geometry	325
Suggestions for Further Reading	341
