| Preface | ix |
| 1 Differential Equations with Given Partial and First Integrals | |
| 1.1 Introduction | 1 |
| 1.2 The Nambu bracket. New properties | 1 |
| 1.3 Ordinary differential equations in \mathbb{R}^N with $M \leq N$ partial integrals | 10 |
| 1.4 Differential equations with partial and first integrals | 17 |
| 1.5 Differential equations and integrability | 22 |
| 1.6 Ordinary differential equations in \mathbb{R}^N with $M > N$ partial integrals | 28 |
| 2 Polynomial Vector Fields with Given Partial and First Integrals | |
| 2.1 Introduction | 41 |
| 2.2 Preliminary definitions and basic results | 42 |
| 2.3 Planar polynomial vector fields with generic algebraic curves | 43 |
| 2.4 On the degree of invariant non-singular algebraic curves | 52 |
| 2.5 Polynomial vector fields with partial integrals | 61 |
| 2.6 Polynomial vector fields with one algebraic curve | 63 |
| 2.7 Quadratic vector fields with algebraic curve with one branch | 67 |
| 2.8 Quadratic vector fields with algebraic curve with $S \geq 2$ branches | 72 |
| 2.9 Polynomial vector fields with $M \geq 2$ algebraic curves | 83 |
| 3 Hilbert's 16th Problem for Algebraic Limit Cycles | |
| 3.1 Introduction | 87 |
| 3.2 Preliminary results | 87 |
| 3.3 Hilbert's 16th problem for generic algebraic limit cycles | 89 |
| 3.4 Hilbert's 16th problem for non-singular algebraic limit cycles | 96 |

| | |
|---|-----|
| 4 Inverse Problem for Constrained Lagrangian Systems | |
| 4.1 Introduction | 117 |
| 4.2 Solution of the inverse problem for constrained Lagrangian systems | 118 |
| 4.3 Examples | 128 |
| 4.4 Inverse problem in dynamics. Generalized Dainelli inverse problems | 138 |
| 4.5 Generalized inverse Bertrand problem | 142 |
| 4.6 Inverse Stäckel problem | 146 |
| 5 Inverse Problem for Constrained Hamiltonian Systems | |
| 5.1 Introduction | 153 |
| 5.2 Hamiltonian system with given first integrals | 155 |
| 5.3 Hamiltonian system with given partial integrals | 161 |
| 6 Integrability of the Constrained Rigid Body | |
| 6.1 Introduction | 165 |
| 6.2 Preliminaries and basic results | 165 |
| 6.3 Integrability of the Suslov problem | 170 |
| 6.4 Integrability of the Veselova problem | 179 |
| 6.5 Constrained rigid body with invariant measure | 191 |
| 6.6 Equations of motion of the rigid body without invariant measure | 196 |
| 7 Inverse Problem in Vakonomic Mechanics | |
| 7.1 Introduction | 201 |
| 7.2 Hamiltonian principle | 204 |
| 7.3 d'Alembert–Lagrange principle | 207 |
| 7.4 The varied path and transpositional relations | 209 |
| 7.5 Hamilton–Suslov principle | 212 |
| 7.6 Modified vakonomic mechanics (MVM) | 214 |
| 7.7 Inverse problem in vakonomic mechanics. Main results | 215 |
| 7.8 Study of the Appell–Hamel mechanical systems by applying MVM | 223 |
| 7.9 MVM versus vakonomic mechanics | 227 |
| 7.10 MVM versus Lagrangian and constrained Lagrangian systems | 234 |
| 7.11 MVM versus Voronets–Chaplygin systems | 239 |
| 7.12 MVM versus Chaplygin systems | 244 |
| 7.13 General aspects of the MVM | 249 |
| Bibliography | 253 |
| Index | 263 |
