

## TABLE OF CONTENTS

EDITORIAL PREFACE	xi
PREFACE	xv
CHAPTER ONE / THE GENERAL THEORY OF INFERENCE AND TERMS	
1. The Rules of Logic	1
2. Terms	2
3. Two Types of Terms	4
4. Simple and Complex Terms	4
5. Complex Terms	5
6. Occurrence of Terms and Statements in Other Terms and Statements	6
7. Metaterms and Metastatements	6
8. The Meaning of Terms	8
9. Terms Including Statements	9
10. Definitions	9
11. Statements	11
12. The Meaning of Statements	13
13. Definitions with Statements	13
14. The Definition of Predicates	15
15. The Truth Values of Statements	16
16. The Number of Truth Values	17
17. The Coordinates of Statements	18
18. Truth Value for Statements with Conjunction, Disjunction and Negation Operators	20
19. Truth Values of Other Forms of Statements	21
20. Tautology, Contradictions, Realizable Statements	24
21. Deduction	25
22. Logical Inference	26
23. The General Theory of Deduction	28
24. Classical and Non-Classical Cases in the Theory of Inference	31
25. The Rules of Inference and the Truth Values of Statements	32

26. Identity by Meaning and Entailment	33
27. The General Theory of Terms	33
28. The Coordinates of Statements	41
29. Consequences of Definitions	44
30. Implicit Definitions	45
31. Incomplete Definitions	46
32. Pseudodefinitions	47
33. Operational Definitions	48
34. Intuitively Obvious Statements	49
35. Variables	49
36. Definitions with Variables	53
37. The Multiple Meanings of Linguistic Expressions	54
38. Explication	55
39. Consistency of Terms	56

#### CHAPTER TWO / THE SPECIAL THEORY OF INFERENCE AND TERMS

1. The Logical Explication of Terms	57
2. Empirical and Abstract Objects	57
3. Individuals	59
4. Classes (Sets)	60
5. Clusters	63
6. States, Events	65
7. Existence	65
8. Quantifiers and Existence	68
9. Modal Predicates	69
10. Possibility	70
11. Contingent Events	73
12. Fatalism	75
13. Modal Operators	77
14. The Actual, the Existential, the Potential	77
15. The Measurement of Possibility	78
16. Relations	80
17. Comparison Relations	80
18. Order Relations	83
19. The Relation 'Between'	85
20. The Existence of Relations	85
21. Ordered Series	86
22. Contact	88

TABLE OF CONTENTS

vii

23. Continuity and Discontinuity of an Empirical Series	89
24. The Beginning and End of a Series	89
25. Interval	92
26. Length	92
27. Abstract Series	95
28. Finite and Infinite Series	96
29. Structure	97
30. Existence of a Structure	101
31. The Dimensions and Order of Structures	102
32. Correspondence	102
33. Correspondence of Classes	104
34. Functions	105
35. Ordered States	106
36. Conditional Statements with an Order-Relation	107
37. Functional Dependence	107
38. Connections	108
39. Ordering of Classes	110

CHAPTER THREE / NUMBER, MAGNITUDE, QUANTITY

1. Numbers in the Language	112
2. Numbers as Terms	113
3. Base Arithmetic	115
4. The Abbreviated Form of NB	117
5. The Universal Nature of Arithmetic	117
6. Expanded Arithmetic (EA)	118
7. Infinite Numbers	119
8. Formal Arithmetic with Metastatements	120
9. Formal Arithmetic and the Theory of Numbers	121
10. Number-Terms	123
11. The Existence of Numbers	123
12. Number as a Part of a Subject	125
13. Quantity	125
14. The Degrees and Range of Truth	127
15. Measurement and Definition	128
16. Number-Quantifiers	128
17. Amount	129
18. The Standard Classes of Numbers	129
19. The Cardinality of Classes of Numbers	130

20. Comparison of Cardinalities of Classes	131
21. Other Definitions	132
22. Reducibility to Logic	133
23. A Remark on the Class of Positive Integers	134
24. A Remark on a Paradox with the Number Terms	135

## CHAPTER FOUR / LOGICAL PHYSICS

1. On the Method of Presentation of Logic	136
2. Empirical Individuals	137
3. Variation	138
4. The Transition State	140
5. Space and Time	140
6. Spatial and Temporal Relations	142
7. The Time and Space of Existence of an Empirical Individual	146
8. The Existence of Space and Time	149
9. The Spatial and Temporal Location of an Individual	151
10. One and the Same Individual	151
11. Change in Space and Time	155
12. The Irreversibility of Time	159
13. On the Relation of Generation	161
14. The Continuity of Space and Time	162
15. Invariance of Space and Time	164
16. Identity and Difference of Location and Time	164
17. The Predication of Variations	165
18. Translation, Change of Place (Movement)	167
19. The Paradox of Motion	168
20. Process	170
21. Minimal Dimensions	171
22. On Infinite Dimensions	176
23. Rate	181
24. Zeno's Paradoxes	185
25. Quanta of Space, Time and Motion	186
26. The Relativity of Motion	186
27. On the Existence and Motion of Clusters	191
28. The Beam	193
29. The Universe as a Whole	194
30. Empirical Geometry	197

TABLE OF CONTENTS

ix

31. Empirical Connections	204
32. The Predicates of Tendencies	205
33. Paradoxes of Connections	207
34. Conditional Predicates	209
35. Influence	210
36. Cause	214
37. Forms of Causal Relations	219
38. Determinism and Indeterminism	222
39. Other Forms of Connections	224
40. On the Logical Situation in Microphysics	225
41. The Wave-Particle Duality	232
42. The Trajectory	235
43. The Part and the Whole	235
44. Forecasts	237
45. The Hypothetical Ontology	239
46. General Assertions Concerning the Universe and Physical Assumptions	247
47. Generalizations of the Results of Science	249

APPENDIX

I. Epistemic Expressions	251
II. On the Concept of Belief	259
III. On the Notion of Preference	259
IV. On the Logic of Norms and Questions	262
V. On the Logic of Estimates	262
VI. On the Theory of Proof	265
VII. On Complete (Rigorous) Induction	266
VIII. On Logical Consistency	270
IX. On the Systems of the Logic of Classes	274
