

Dipl.-Ing. Anja Klein, Niederkirchen

**Multi-user detection of
CDMA signals - algorithms
and their application
to cellular mobile radio**

Reihe **10**: Informatik/
Kommunikationstechnik Nr. **423**

Contents

1	Introduction	1
1.1	CDMA in cellular mobile radio systems	1
1.1.1	Cellular mobile radio	1
1.1.2	Evaluation of CDMA in comparison with TDMA for multiple access in cellular mobile radio systems	6
1.1.3	Description and evaluation of different detection principles for CDMA signals	12
1.2	State of the art and open problems	14
1.2.1	Detection of CDMA signals	14
1.2.2	Application of CDMA to cellular mobile radio systems	23
1.3	Goals of this thesis.....	25
1.4	Contents and important results	27
2	Multi-user detection algorithms for CDMA.....	32
2.1	Derivation of the discrete-time transmission model.....	32
2.1.1	General approach	32
2.1.2	Continuous-time transmission model	32
2.1.3	Discrete-time transmission model	36
2.1.4	Description of the discrete-time transmission model using matrix-vector notation	38
2.1.5	Extensions of the discrete-time transmission model.....	43
2.1.6	Special cases covered by the discrete-time transmission model.....	45
2.2	Detection problem	48
2.3	Overview of the detection algorithms	49
2.4	Maximum likelihood algorithms	52
2.5	Linear algorithms.....	54
2.5.1	General approach	54
2.5.2	Matched filtering.....	59
2.5.3	Zero forcing block linear equalization.....	62
2.5.4	Minimum mean square error block linear equalization	65
2.6	Decision feedback algorithms	68
2.6.1	General approach	68
2.6.2	Feedback function.....	75
2.6.3	Matched filtering with decision feedback.....	82
2.6.4	Zero forcing block decision feedback equalization	85
2.6.5	Minimum mean square error block decision feedback equalization	89
2.7	Maximum likelihood based two-stage algorithms.....	92
2.7.1	General approach	92
2.7.2	Parallel postdetection.....	100
2.7.3	Successive postdetection.....	103
2.8	Algorithms specially designed for the downlink situation	105
2.8.1	General approach	105
2.8.2	Zero forcing and minimum mean square error block equalization.....	108
2.9	Modifications of the algorithms	113

3 Cellular mobile radio system concept JD-C/TDMA.....	116
3.1 Multiple access scheme and system features	116
3.2 Signal format	120
3.3 Transmitter and receiver structure	123
3.4 Criteria for the choice of the values of the system parameters	126
4 Performance of the multi-user detection algorithms in the JD-C/TDMA system concept	130
4.1 Presuppositions	130
4.2 Influence of the data detection algorithm	134
4.2.1 Matched filtering and maximum likelihood algorithms	134
4.2.2 Zero forcing and minimum mean square error block equalization	136
4.2.3 Maximum likelihood based two-stage algorithms	138
4.3 Influence of the number of active users	143
4.4 Influence of the data modulation	145
4.5 Influence of the propagation area and of the bandwidth	146
4.6 Influence of the near-far effect	147
4.7 Influence of correlated noise	150
4.8 Influence of channel coding	152
4.9 Influence of the specific situation in the downlink	155
4.10 Influence of real world effects	160
5 Suitability of multi-user detection algorithms for application to cellular mobile radio systems	163
5.1 Feasibility	163
5.2 Effect on system flexibility	165
5.3 Effect on system capacity	166
6 Summaries	175
6.1 Summary in English	175
6.2 Kurzfassung in deutscher Sprache	176
List of often used symbols and abbreviations	184
Symbols	184
Abbreviations	188
Bibliography	190
