

Thomas J. Reiter, Wien

Functional Adaption of Bone and Application in Optimal Structural Design

Reihe **17**: Biotechnik

Nr. **145**

TABLE OF CONTENTS

1. INTRODUCTION	1
1.1 Introduction and Motivation	1
2. THE CONCEPT OF FUNCTIONAL ADAPTATION	3
2.1 Principle Considerations	3
2.2 Historical Overview	5
2.3 Biological Aspects of Bone Remodeling	7
2.4 Experimental Investigations of Functional Adaptation	12
2.5 Mathematical Formulations of Functional Adaptation	17
3. MICROMECHANICAL MATERIAL MODELS	32
3.1 Material Symmetries	32
3.2 Particle and Fiber Reinforced Composites	37
3.3 Bone Material	45
4. A MODEL FOR THE FUNCTIONAL ADAPTATION OF BONE	62
4.1 Description of the Remodeling Procedure	62
4.2 Some Details of the Implementation	69
4.3 Biomechanical Examples	70
4.3.1 <i>The Trabecular Architecture of the Proximal Femur</i>	72
4.3.2 <i>Density Distribution Around a Tibial Implant</i>	76
4.3.3 <i>Density Distribution Around a Dental Implant</i>	78
5. STABILITY OF THE FUNCTIONAL ADAPTATION ALGORITHM	80
5.1 General Remarks	80
5.2 The Stability Behavior of the Remodeling Rule	81
5.2.1 <i>Parallel Spring Model</i>	82
5.2.2 <i>The Stability of Finite Element Based Remodeling Rules</i>	88
5.3 Stability Problems Due to the Discretization	94
6. FUNCTIONAL ADAPTATION AS AN OPTIMIZATION TOOL	99
6.1 Structural Optimization	99
6.2 Optimal Design with Advanced Materials	101
6.2.1 <i>Minimal Compliance for Unrestricted Materials</i>	101
6.2.2 <i>Minimal Compliance for Restricted Materials</i>	104
6.2.3 <i>Optimal Material Distribution</i>	107
6.3 Functional Adaptation as an Heuristic Design Improvement Tool	109
6.3.1 <i>Topology Finding Using Functional Adaptation</i>	109
6.3.2 <i>Shape Design Improvement Using Functional Adaptation</i>	112

6.3.3 <i>Functional Adaptation of Particle Reinforced Composites</i>	115
7. CONCLUSIONS	122
8. REFERENCES	124
