

Contents

1	Concepts and Constructs	1
1.1	Representations of Groups	2
1.2	Representations and Their Morphisms	4
1.3	Direct Sums and Tensor Products	4
1.4	Change of Field	5
1.5	Invariant Subspaces and Quotients	6
1.6	Dual Representations	7
1.7	Irreducible Representations	10
1.8	Schur's Lemma	12
1.9	The Frobenius-Schur Indicator	14
1.10	Character of a Representation	16
1.11	Diagonalizability	20
1.12	Unitarity	22
1.13	Rival Reads	24
1.14	Afterthoughts: Lattices	25
	Exercises	28
	A Reckoning	37
2	Basic Examples	39
2.1	Cyclic Groups	40
2.2	Dihedral Groups	43
2.3	The Symmetric Group S_4	48
2.4	Quaternionic Units	52
2.5	Afterthoughts: Geometric Groups	54
	Exercises	56

3	The Group Algebra	59
3.1	Definition of the Group Algebra	60
3.2	Representations of G and $\mathbb{F}[G]$	61
3.3	The Center	63
3.4	Deconstructing $\mathbb{F}[S_3]$	65
3.5	When $\mathbb{F}[G]$ Is Semisimple	73
3.6	Afterthoughts: Invariants	77
	Exercises	79
4	More Group Algebra	83
4.1	Looking Ahead	84
4.2	Submodules and Idempotents	86
4.3	Deconstructing $\mathbb{F}[G]$, the Module	89
4.4	Deconstructing $\mathbb{F}[G]$, the Algebra	91
4.5	As Simple as Matrix Algebras	97
4.6	Putting $\mathbb{F}[G]$ Back Together	102
4.7	The Mother of All Representations	107
4.8	The Center	109
4.9	Representing Abelian Groups	111
4.10	Indecomposable Idempotents	112
4.11	Beyond Our Borders	114
	Exercises	115
5	Simply Semisimple	125
5.1	Schur's Lemma	126
5.2	Semisimple Modules	127
5.3	Deconstructing Semisimple Modules	131
5.4	Simple Modules for Semisimple Rings	134
5.5	Deconstructing Semisimple Rings	136
5.6	Simply Simple	140
5.7	Commutants and Double Commutants	141
5.8	Artin-Wedderburn Structure	144
5.9	A Module as the Sum of Its Parts	145
5.10	Readings on Rings	147
5.11	Afterthoughts: Clifford Algebras	147
	Exercises	151

6	Representations of S_n	157
6.1	Permutations and Partitions	157
6.2	Complements and Young Tableaux	161
6.3	Symmetries of Partitions	165
6.4	Conjugacy Classes to Young Tableaux	168
6.5	Young Tableaux to Young Symmetrizers	169
6.6	Youngtab to Irreducible Representations	170
6.7	Youngtab Apps	174
6.8	Orthogonality	179
6.9	Deconstructing $\mathbb{F}[S_n]$	180
6.10	Integrality	183
6.11	Rivals and Rebels	184
6.12	Afterthoughts: Reflections	184
	Exercises	188
7	Characters	189
7.1	The Regular Character	190
7.2	Character Orthogonality	194
7.3	Character Expansions	203
7.4	Comparing Z -Bases	206
7.5	Character Arithmetic	208
7.6	Computing Characters	211
7.7	Return of the Group Determinant	214
7.8	Orthogonality of Matrix Elements	217
7.9	Solving Equations in Groups	219
7.10	Character References	228
7.11	Afterthoughts: Connections	229
	Exercises	230
8	Induced Representations	235
8.1	Constructions	235
8.2	The Induced Character	238
8.3	Induction Workout	239
8.4	Universality	242
8.5	Universal Consequences	243
8.6	Reciprocity	245
8.7	Afterthoughts: Numbers	247
	Exercises	248

9	Commutant Duality	249
9.1	The Commutant	249
9.2	The Double Commutant	251
9.3	Commutant Decomposition of a Module	254
9.4	The Matrix Version	260
	Exercises	264
10	Character Duality	267
10.1	The Commutant for S_n on $V^{\otimes n}$	267
10.2	Schur Weyl Duality	269
10.3	Character Duality, the High Road	270
10.4	Character Duality by Calculations	271
	Exercises	278
11	Representations of $U(N)$	281
11.1	The Haar Integral	282
11.2	The Weyl Integration Formula	283
11.3	Character Orthogonality	284
11.4	Weights	285
11.5	Characters of $U(N)$	286
11.6	Weyl Dimension Formula	290
11.7	From Weights to Representations	291
11.8	Characters of S_n from Characters of $U(N)$	294
	Exercises	299
12	Postscript: Algebra	301
12.1	Groups and Less	301
12.2	Rings and More	306
12.3	Fields	314
12.4	Modules over Rings	315
12.5	Free Modules and Bases	319
12.6	Power Series and Polynomials	323
12.7	Algebraic Integers	329
12.8	Linear Algebra	330
12.9	Tensor Products	335
12.10	Extension of Base Ring	338

12.11 Determinants and Traces of Matrices 339
12.12 Exterior Powers 340
12.13 Eigenvalues and Eigenvectors 345
12.14 Topology, Integration, and Hilbert Spaces 346
