CHAPTER 1 Introduction	1
Structural representation	1
Nomenclatures, notations and line-formulae	4
Principal chemical nomenclature and notation systems	7
Brief description of the systems selected for study	10
The nodal nomenclature of Lozac'h	11
The new Dyson nomenclature	16
The HIRN system	28
Nomenclature translation	31
Outline of the project	32
CHAPTER 2 Storage of the structure	34
The path connectivity matrix (PCM)	34
General construction of the PCM	35
Acyclic structures	35
Cyclic structures	41
Heterocycles - nodal variation	49
Unsaturation - edge variation	51
Multicomponent structures	56
Stereochemistry	58
Other information	60
Examples	62
Conversion of a variety of nomenclatures and notations to and from the PCM	65
Other uses of the PCM	67
CHAPTER 3 Derivation of the Path Connectivity Matrix	69
Introduction	69
IUPAC nomenclature	69
The nodal nomenclature of Lozac'h	78
The HIRN system	87
The new Dyson nomenclature	88
The Hull Concise Connection Table (CCT)	104
Input by interactive question and answer	107
The Wiswesser Line Notation (WLN)	114

CHAPTER 4	Derivation of names for acyclic hydrocarbons	117
	Introduction	117
	General procedure for analysis of the PCM	117
	Examination of end-to-end chains	121
	IUPAC nomenclature	132
	The Concise Connection Table (CCT)	134
	The nodal nomenclature of Lozac'h	134
	The HIRN system	141
	The new Dyson nomenclature	143
	The modified Dyson-IUPAC (DIP) notation	143
CHAPTER 5	Derivation of names for cyclic structures	150
	Nomenclature/notation systems covered	150
	Calculating the smallest number of rings in a polycycle	151
	Analysis of the fused ring PCM	153
	Derivation of the Smallest Set of Smallest Rings (SSSR)	159
	Dyson type notation and nomenclature from the SSSR	165
	The nodal nomenclature of Lozac'h	178
	The HIRN system	199
	The von Baeyer enumeration	204
CHAPTER 6	Problems with computer application	205
	Introduction	205
	SSSR versus largest ring	206
	Order of rings in the SSSR	207
	Dual systems of naming polycycles	208
	The longest bridge and branching bridges	209
	Internal rings in polycycles	211
	The prefix 'cyclo' and multiplier	212
	Enlargement and diminution of cycle size	213
	Orientation of a polycycle	213
	Use of the longest chain for acyclic nomenclature	214
	Looking ahead for data	215
	Exceptions to rules	215
	Mixed sorting	216
	Omission of the 1-locant	216
	Use of alkyl names	217
	Alphabetical order	218
	Atom, group and section multipliers	218
	Subscripts and superscripts	219
	Order of non-carbon atoms	219
	Alternative names	220
	Trivial names and radicals	220
	Computer (un)friendliness	221

CHAPTER 7	Towards a new nomenclature	223
	Introduction	223
	Choice of main ring	228
	Enumeration of a polycycle	230
	Description of the numbering system for cyclic structures	236
	The PCM from a cyclic code	237
	Acyclic structures	238
	Numbering the main chain	240
	Numbering the branch nodes	241
	Describing the structure	242
	Conversion of an acyclic code to a PCM	244
	Derivation of the new acyclic code from a PCM	246
	Heterocyclic atoms and unsaturation	251
	Spiro structures	252
	Other aspects	253
CHAPTER 8	Conclusion	254
	References	258
	Index	262
