Contents

Preface	xi
Acknowledgements	xv
1 Algorithmic aspects	1
1.1 Algorithms for computing $g(a_1, a_2, a_3)$	3
1.1.1 Rødseth's Algorithm	3
1.1.2 Davison's Algorithm	4
1.1.3 Killingbergtrø's method	6
1.2 General algorithms	8
1.2.1 Scarf and Shallcross' method	8
1.2.2 Heap and Lynn method	11
1.2.3 Greenberg's Algorithm	18
1.2.4 Nijenhuis' Algorithm	19
1.2.5 Wilf's Algorithm	19
1.2.6 Kannan's method	21
1.3 Computational complexity of FP	24
1.4 Supplementary notes	28
2 The Frobenius number for small n	31
2.1 Computing $g(p, q)$ is easy	31
2.2 A Formula for $g(a_1, a_2, a_3)$	35
2.3 Results when $n = 3$	36
2.3.1 Hofmeister's formula and its generalization	39
2.3.2 More special cases	40
2.3.3 Johnson integers	42
2.4 $g(a_1, a_2, a_3, a_4)$	42
2.5 Supplementary notes	43
3 The general problem	45
3.1 Formulas and upper bounds	45
3.2 Bounds in terms of the $lcm(a_1, \dots, a_n)$	57
3.3 Arithmetic and related sequences	59
3.4 Regular bases	61
3.5 Extending basis	62

3.6	Lower bounds	63
3.7	Supplementary notes	68
4	Sylvester denumerant	71
4.1	From partitions to denumerants	71
4.2	Formulas and bounds for $d(m; a_1, \dots, a_n)$	73
4.3	Computing denumerants	77
4.3.1	Partial fractions	77
4.3.2	Bell's method	78
4.4	$d(m; p, q)$	80
4.5	$d(m; a_1, a_2, a_3)$ and $d(m; a_1, a_2, a_3, a_4)$	81
4.6	Hilbert series	86
4.7	A proof of a formula for $g(a_1, a_2, a_3)$	89
4.8	Ehrhart polynomial	91
4.9	Variations of the denumerant	95
4.9.1	$d'(m; a_1, \dots, a_n)$	96
4.9.2	$d''(m; a_1, \dots, a_n)$	98
4.10	Supplementary notes	100
5	Integers without representation	103
5.1	Sylvester's classical result	103
5.2	Nijenhuis' and Wilf's results	105
5.3	Formulas for $N(a_1, \dots, a_n)$	108
5.4	Arithmetic sequences	110
5.5	The sum of integers in $N(p, q)$	111
5.6	Related games	113
5.6.1	Sylver Coinage	113
5.6.2	The jugs problem	114
5.7	Supplementary notes	117
6	Generalizations and related problems	119
6.1	Special functions	119
6.2	The modular generalization	124
6.3	The postage stamp problem	127
6.4	(a_1, \dots, a_n) -trees	128
6.5	Vector generalization of FP	130
6.6	Supplementary notes	133
7	Numerical semigroups	135
7.1	Gaps and non-gaps	135
7.1.1	Telescopic semigroups	139
7.1.2	Hyperelliptic semigroups	140

7.2	Symmetric semigroups	141
7.2.1	Intersection of semigroups	148
7.2.2	Apéry sets	149
7.3	Related concepts	150
7.3.1	Type sequences	150
7.3.2	Complete intersection	152
7.3.3	The Möbius function	153
7.4	Supplementary notes	154
8	Applications of the Frobenius number	159
8.1	Complexity analysis of the Shell-sort method	159
8.2	Petri Nets	161
8.2.1	P/T systems	161
8.2.2	Weighted circuits systems	163
8.3	Partition of a vector space	165
8.4	Monomial curves	168
8.5	Algebraic geometric codes	171
8.6	Tilings	174
8.7	Applications of denumerants	175
8.7.1	Balls and cells	175
8.7.2	Conjugate power equations	177
8.7.3	Invariant cubature formulas	179
8.8	Other applications	179
8.8.1	Generating random vectors	179
8.8.2	Non-hamiltonian graphs	181
8.9	Supplementary notes	183
Appendix A		
	Problems and conjectures	185
A.1	Algorithmic questions	185
A.2	$g(a_1, \dots, a_n)$	186
A.3	Denumerant	187
A.4	$N(a_1, \dots, a_n)$	187
A.5	Gaps	188
A.6	Miscellaneous	189
A.6.1	Erdős' Problems	191
Appendix B		
	193	
B.1	Computational complexity aspects	193
B.2	Graph theory aspects	194
B.3	Modules, resolutions and Hilbert series	194
B.4	Shell-sort method	197

x *Contents*

B.5	Bernoulli numbers	198
B.6	Irreducible and primitive matrices	200
B.6.1	Upper bounds of index of primitivity	202
B.6.2	Computation of index of primitivity	203
	References	205
	Index	241
