

# Contents

<i>Notation</i> . . . . .	xi
<i>1. Kinetic Theory of Gases—Equilibrium</i>	
1.1. Introduction . . . . .	1
1.2. The Maxwell–Boltzmann Distribution of Velocities . . . . .	2
1.3. Determination of Pressure . . . . .	6
1.4. Properties of the Maxwell Distribution . . . . .	9
1.5. The Molecular Flux and Effusion of Gases . . . . .	13
Problems . . . . .	14
General References . . . . .	15
<i>2. Kinetic Theory of Gases—Transport</i>	
2.1. Introduction . . . . .	17
2.2. Mean Free Path . . . . .	18
2.3. Collision Frequency . . . . .	20
2.4. Macroscopic Equations of Transport . . . . .	24
2.5. Solution of the Transport Equations . . . . .	26
2.6. Kinetic Theory of Transport and Postulate of Local Equilibrium . . . . .	29
2.7. Simplified Transport Theory: Dilute Hard-Sphere Gas . . . . .	30
2.8. Comparison with Experiment . . . . .	35
Appendix. Coordinate Transformation by Jacobian Method . . . . .	44
Problems . . . . .	45
General References . . . . .	47
<i>3. Electrolytic Conduction and Diffusion</i>	
3.1. Introduction . . . . .	49
3.2. Ionic Conduction in Solution—a Review . . . . .	50

3.3. Nernst–Einstein Relation . . . . .	53
3.4. Electrolyte Diffusion . . . . .	56
3.5. Stokes' Law and the Microscopic Interpretation of $\lambda^0$ . . . . .	57
3.6. The Mobility of $H^+$ and $OH^-$ in Water . . . . .	61
3.7. The Concentration Dependence of $\lambda$ . . . . .	62
3.8. The Wien Effects . . . . .	65
Problems . . . . .	67
General References . . . . .	69
4. <i>Determination of Rate Laws</i>	
4.1. Introduction . . . . .	71
4.2. Stoichiometry, Rate Law, and Mechanism . . . . .	72
4.3. Elementary Rate Laws and the Principle of Mass Action . . . . .	73
4.4. Reaction Order and Molecularity . . . . .	77
4.5. The Principle of Detailed Balance . . . . .	78
4.6. Experimental Methods for Determining Rate Laws . . . . .	80
4.7. Integrated Rate Laws—First Order . . . . .	85
4.8. Isolation Methods . . . . .	87
4.9. Relaxation Methods . . . . .	89
4.10. Determination of Rate Law from Data—Two Examples . . . . .	93
4.11. Temperature Dependence of Rate Constants . . . . .	98
Appendix. Linear Least-Squares Analysis . . . . .	101
Problems . . . . .	103
General References . . . . .	110
5. <i>Stationary State Mechanisms</i>	
5.1. Introduction . . . . .	113
5.2. Consecutive Reactions—First Order . . . . .	114
5.3. Consecutive Reactions—Arbitrary Order . . . . .	120
5.4. Unimolecular Decomposition—Gases . . . . .	124
5.5. Radical Recombination—Gases . . . . .	127
5.6. Complex Mechanisms—Gaseous Chain Reactions . . . . .	131
5.7. Simple Mechanisms—Solution . . . . .	135
5.8. Complex Mechanisms—Solution . . . . .	139
5.9. Homogeneous Catalysis . . . . .	142
5.10. Enzyme Catalysis . . . . .	145
5.11. Heterogeneous Catalysis . . . . .	147
Appendix A. Matrix Solution to the Coupled Rate Equation (5.2) . . . . .	153
Appendix B. Approximations to $\kappa_+$ and $\kappa_-$ . . . . .	156
Problems . . . . .	157
General References . . . . .	163

## 6. Photochemistry

6.1. Introduction . . . . .	165
6.2. Measurement of Intensity . . . . .	166
6.3. Spectroscopic Review . . . . .	167
6.4. Primary Processes . . . . .	169
6.5. Secondary Processes . . . . .	178
6.6. Chemiluminescence . . . . .	184
6.7. Orbital Symmetry Correlations: Woodward–Hoffman Rules . . . . .	185
6.8. Laser Activation . . . . .	188
6.9. Laser-Controlled Isotope Separation . . . . .	192
Problems . . . . .	195
General References . . . . .	199

## 7. Nonstationary State Mechanisms

7.1. Introduction . . . . .	201
7.2. Thermal Explosion . . . . .	202
7.3. Population Explosion—Autocatalysis . . . . .	205
7.4. The Lotka Problem: Chemical Oscillations . . . . .	209
7.5. The Belousov–Zhabotinskii Reaction . . . . .	214
7.6. Other Oscillating Systems . . . . .	220
7.7. Multiple Stationary States: The $\text{NO}_2\text{--N}_2\text{O}_4$ Reaction . . . . .	226
Problems . . . . .	229
General References . . . . .	232

## 8. Single-Collision Chemistry

8.1. Introduction . . . . .	233
8.2. Reaction Cross Section: Relation to the Rate Constant . . . . .	234
8.3. Scattering Measurements—Molecular Beams . . . . .	237
8.4. Reaction Cross Section: Hard-Sphere Model . . . . .	240
8.5. Reaction Cross Section: Ion–Molecule Systems . . . . .	244
8.6. Reaction Cross Section: Atom–Molecule Systems . . . . .	248
8.7. Product Distribution Analysis . . . . .	252
8.8. Direct, Forward-Peaked—The $\text{Ar}^+ + \text{D}_2$ System . . . . .	254
8.9. Recoil—The $\text{D} + \text{Cl}_2$ System . . . . .	257
8.10. Collision Complexes—The $\text{O} + \text{Br}_2$ System . . . . .	259
8.11. State Selection Experiments . . . . .	261
Problems . . . . .	263
General References . . . . .	267

9. <i>Theories of Reaction Rates</i>	
9.1. Introduction . . . . .	269
9.2. Potential-Energy Surfaces . . . . .	270
9.3. Activated Complex Theory . . . . .	276
9.4. Model Calculations of $k_2(T)$ . . . . .	281
9.5. The Kinetic Isotope Effect . . . . .	287
9.6. Unimolecular Reaction—General Features . . . . .	291
9.7. Unimolecular Reaction—RRKM Theory . . . . .	293
9.8. Critique of RRKM Theory—Isomerization of Methyl Isocyanide . . . . .	299
9.9. Thermodynamic Analogy . . . . .	302
9.10. Gas-Phase Reactions . . . . .	304
9.11. Solution Reactions . . . . .	306
9.12. Primary Salt Effect . . . . .	307
9.13. Diffusion-Limited Kinetics—Debye Theory . . . . .	309
Appendix A. Statistical Thermodynamics . . . . .	316
Appendix B. Evaluation of $k_\infty$ in RRKM Theory . . . . .	318
Problems . . . . .	319
General References . . . . .	323
10. <i>A Dynamical Model for Chemical Reaction</i>	
10.1. Introduction . . . . .	325
10.2. Kinetic Energy of a Triatomic System . . . . .	326
10.3. Model for Inelastic Collision . . . . .	328
10.4. Effects Due to More Complex Potential-Energy Surfaces . . . . .	333
10.5. Model for Thermoneutral Chemical Reaction . . . . .	335
10.6. Exoergic Reactions . . . . .	339
10.7. Endoergic Reactions . . . . .	342
10.8. Noncollinear Geometries . . . . .	345
10.9. Realistic Scattering Calculations . . . . .	348
Problems . . . . .	351
General References . . . . .	353
<i>Physical Constants</i> . . . . .	355
<i>Index</i> . . . . .	357
