Preface	v
1 Introduction to Nitrogen Heteroaromatic Chemistry	1
(A) Historical Introduction	1
(B) Aromaticity: The Structure and Numbering of the Nitrogen Heterocycles	3
(C) ' π Excessive' and ' π deficient' Heterocycles	5
(D) General Properties of Nitrogen Heterocycles	8
(E) Tautomerism in the Nitrogen Heterocycles	11
2 The Chemistry of the Pyrimidines	15
(A) Introduction	15
(B) The Five Principles of Pyrimidine Chemistry	16
(C) Synthesis of the Pyrimidine Ring	19
(D) General Properties, Ionization, and Spectra of Pyrimidines	26
(E) Reactions of Pyrimidines	41
3 The Chemistry of the Purines and Pteridines	64
(A) Introduction	64
(B) The Purines	65
(C) The Pteridines	86
4 Nucleosides and Nucleotides	104
(A) Introduction: The Structure and Nomenclature of Nucleosides and Nucleotides	104
(B) The Chemical Synthesis of Nucleosides	109
(C) The Chemical Reactions of Nucleosides	113
(D) The Synthesis of Nucleotides	117
(E) Chemical Reactions and Properties of Nucleotides	120
(F) Nucleoside Antibiotics	121
5 The Nucleotide Coenzymes and Related Compounds	135
(A) Introduction: The B Group Vitamins	135
(B) Biological Phosphorylating Agents	150
(C) Activation by dinucleotide formation and adenylyl transfer	153
6 The Biosynthesis and Metabolism of the Pyrimidine and Purine Nucleotides	157

(A)	Introduction	157
(B)	The Biosynthesis of the Purine Nucleotides	158
(C)	The Biosynthesis of the Pyrimidine Nucleotides	163
(D)	The Catabolism of Nucleotides	165
(E)	The Role of Folic Acid in one-carbon unit Transfer	168
(F)	The Sulphonamides	171
(G)	Pathological Abnormalities of Purine Metabolism	172
7	The Nucleic Acids	179
(A)	Introduction	179
(B)	The Occurrence of Nucleic Acids	180
(C)	The Structures of the Nucleic Acids	181
(D)	Chemical and Enzymic Degradation of Nucleic Acids	191
(E)	Replication	194
(F)	DNA Polymerases	197
(G)	Transcription	198
8	Events at the Ribosome—Translation	204
(A)	Introduction	204
(B)	Steps in Protein Synthesis	205
(C)	Recognition between Codon and Anticodon—The Genetic Code	208
(D)	Chain Termination	209
(E)	Inhibition of Protein Synthesis	211
(F)	Mutation and Mutagens	214
9	Carcinogens and Cancer Chemotherapy	219
(A)	Introduction	219
(B)	Chemical Carcinogenesis	220
(C)	The Chemotherapy of Cancer	225
(D)	Conclusion	234
10	Nitrogen Heteroaromatic Pharmaceuticals	237
(A)	Introduction	237
(B)	The Barbiturates	238
(C)	Antimalarials	241
(D)	Diuretics	242
(E)	Antithyroid Pyrimidines	244
(F)	Antiviral Agents	244
(G)	Some Other Pyrimidines of Pharmaceutical Interest	246
(H)	Some Pyrimidine and Related Natural Products	247
(I)	Pyrimidine Derivatives as Agricultural Chemicals	247
(J)	Conclusion	249
	Addendum: Some Biological and Biochemical terms used in this book	253
	Index	257
