

M. Sc. Wen Xu, München

Quality Assessment of Compressed and Impaired Monochrome Still Pictures

Reihe **10**: Informatik/
Kommunikationstechnik Nr. **459**

Contents

1	Introduction	1
1.1	Background	1
1.2	Scope of This Thesis	2
2	Basics of Source Coding Theory	6
2.1	Source Information Rate	6
2.2	Rate-Distortion Criterion	8
2.3	Redundancy Reduction and Irrelevancy Reduction	10
3	Basic Visual Perception	12
3.1	Neurophysiological Background	12
3.1.1	Eye Optics	14
3.1.2	Retina	14
3.1.3	Visual Cortex	15
3.1.4	Eye Movements	16
3.2	Psychophysical Characteristics of Threshold Vision	16
3.2.1	Luminance Adaptation	17
3.2.2	Modulation Transfer Function	19
3.2.3	Spatial Masking	20
3.2.4	Independent Channels	21
3.2.5	Stimulus Summation	22
4	Subjective Rating of Picture Coding Algorithms	24
4.1	Source Pictures and Bitrate	25
4.2	Coder Implementation, Optimization, and Test Picture Generation	26
4.2.1	Stand-alone Coding Algorithms	26
4.2.1.1	DPCM Coding	27
4.2.1.2	Vector Quantization	28
4.2.1.3	DCT Coding	29
4.2.1.4	Recursive Block Coding	30

4.2.1.5 Subband Coding	32
4.2.1.6 Wavelet Transform Coding	38
4.2.1.7 Laplacian Pyramid Coding	39
4.2.1.8 Cortex Transform Coding	40
4.2.2 Combined Coding Algorithms	42
4.2.2.1 The JPEG Standard	42
4.2.2.2 Wavelet Transform with RLC and VLC	43
4.2.2.3 DCT with Product Pyramid VQ	43
4.2.2.4 Subband Transform with Product Pyramid VQ	44
4.3 Subjective Picture Quality Experiments	44
4.3.1 Grading Scale	44
4.3.2 Test Procedure	45
4.3.3 Subjects	45
4.3.4 Data Evaluation	49
4.4 Results	49
4.5 Discussions	60
5 Visually Relevant Picture Quality Metrics	61
5.1 Psychophysical Preprocessing of Pictures	61
5.1.1 Monitor Characteristic and Weber-Fechner's Law	62
5.1.2 Modulation Transfer Function	63
5.1.3 Masking	64
5.1.4 Error Summation	65
5.2 Regression and Correlation	66
5.2.1 Regression Functions	66
5.2.2 Correlation and Rank-order Correlation Coefficients	67
5.3 Coder-relevant Picture Data Base	68
5.4 Test Results	72
5.4.1 Search for a Better Error Metric	72
5.4.2 Picture and Distortion Dependency of Visually Relevant Metrics	75
6 Picture Quality Evaluation Based on Error Classification	82
6.1 Visual Preprocessing of Pictures	83
6.2 Picture-dependent Segmentation of Errors	85
6.3 Distortion Factors Based on Segmented Components	87

6.4	Combination of the Distortion Factors	88
6.4.1	Linear Model	88
6.4.2	General Linear Model Based on Logistic Function	89
6.4.3	Impairment Addition Model by the British Post Office	90
6.5	Simulation Results	92
6.5.1	Picture Quality Factors Related to Different Distortions	92
6.5.2	SEM as a Combination of Distortion Factors	93
6.5.2.1	Linear Combination	94
6.5.2.2	General Linear Combination Based on Logistic Function	94
6.5.2.3	Nonlinear Combination by Using the Impairment Addition Rule	94
6.5.3	Performance of the SEM	95
6.5.4	Open Data Test vs. Closed Data Test	100
6.6	Discussions	102
7	Conclusions	104
	Appendix	109
A1	Bitrate Estimation in Subband-like Coding	109
A2	Comparison of Typical Subband-based Coding Schemes	114
A2.1	Conversion of Subband-based Coding Schemes into a Parallel Structure	114
A2.2	Comparison in Fourier Frequency Domain	117
A3	On the Accuracy of Subjective and Objective Assessment of Picture Quality ..	119
A3.1	Accuracy of Measured MOS	119
A3.2	How Much Can an Ideal Error Metric Correlate with MOS?	120
A4	Psychophysical Experiments on Spatial Masking	123
A4.1	Experiments on Masking at Luminance Edges	124
A4.2	Test Results	125
A4.3	Modelling of Threshold Masking	127
	References	129
