# **Solids Mixing and Segregation in a Circulating Fluidized Bed**

Reihe **3**: Verfahrenstechnik

Nr. **489**

# Table of Content

<b>Nomenclature</b> .....	VII
<b>1 Introduction</b> .....	<b>1</b>
1.1 Circulating fluidized beds.....	1
1.2 The significance of solids mixing and segregation in circulating fluidized bed applications.....	4
1.3 Solids mixing and segregation - a state of the art review .....	9
1.3.1 Experimental findings .....	9
1.3.2 Characterization of solids mixing and segregation states in fluidized beds.....	12
1.3.3 Solids segregation in solids entrainment models .....	15
1.4 Scope of the present work .....	19
<b>2 Experimental</b> .....	<b>21</b>
2.1 Experimental apparatus.....	21
2.2 Characterization of bed materials used .....	21
2.3 Measuring techniques .....	29
<b>3 Experimental results</b> .....	<b>31</b>
3.1 Non-steady state mixing experiments .....	31
3.2 Preliminary investigations with an iron ore/quartz sand I mixture .....	32
3.3 Axial segregation of an iron powder/quartz sand I mixture.....	35
3.4 Axial segregation of quartz sand II.....	37
3.5 Radial segregation of an iron powder/quartz sand I mixture .....	37
<b>4 The terminal velocity as the decisive parameter affecting solids segregation</b> .....	<b>42</b>
4.1 Segregation intensity based on the terminal velocity.....	44
4.2 Axial segregation in terms of local terminal velocity distributions .....	46
4.3 Comparison of segregation tendencies of both bed materials .....	47
<b>5 Modeling of solids mixing and segregation in a circulating fluidized bed riser</b> .....	<b>50</b>
5.1 Mechanisms of solids segregation and mixing.....	50
5.2 Modeling.....	51

5.3 Modeling of the upper dilute zone.....	52
5.3.1 Overall flow structure in the upper dilute zone.....	52
5.3.2 Solids motion within each phase of the upper dilute zone.....	54
5.3.3 Solids circulation in the upper dilute zone.....	56
5.3.4 Interfacial solids exchange.....	57
5.3.5 Mass balances and boundary conditions.....	59
5.4 Bottom zone modeling.....	61
5.5 Exit zone modeling.....	61
5.6 Solving algorithm.....	62
<b>6 Validation of the model.....</b>	<b>64</b>
6.1 Model and input parameters.....	64
6.1.1 Characterization of the bed material used.....	64
6.1.2 Axial solids volume concentration profiles.....	67
6.1.3 Solids volume concentration in the dense phase of the upper dilute zone.....	69
6.1.4 The mass fraction of a given terminal-velocity fraction in the mass flux from the return leg into the bottom zone.....	69
6.2 Calculated axial mass fraction profiles of terminal-velocity fractions.....	69
6.3 Comparison of calculated and measured local terminal-velocity distributions.....	71
6.4 Comparison of calculated and measured local mean particle sizes of quartz sand II.....	74
6.5 Comparison of calculated and measured local iron powder fractions of iron powder/quartz sand I mixture.....	76
6.6 The coefficient of mass transfer between the dense and lean phases.....	78
6.7 The solids volume concentration in the dense phase of the upper dilute zone.....	80
6.8 Summary of solids mixing and segregation model.....	82
<b>7 Summary and conclusions.....</b>	<b>83</b>
<b>8 References.....</b>	<b>85</b>
