Preface	viii
1. Analyzing Two-Way Treatment Structures with One Observation Per Treatment Combination	1
1.1 Introduction	2
1.2 An Example	3
1.3 Model Definition and Parameter Estimation	4
1.4 What Can Be Done?	5
1.5 A Heuristic Test for Interaction	5
1.6 Tukey's Single-Degree-of-Freedom Test for Non-additivity	7
1.7 Two-Way Interaction Plots	13
1.8 Mandel's Bundle of Straight Lines Model	17
1.9 Comparing Mandel's Model and Tukey's Model	29
1.10 Generalized Interaction Models	31
1.11 Characteristic Root Test for Interaction	32
2. The Multiplicative Interaction Model	41
2.1 Model Definition and Parameter Estimation	42
2.2 Selecting an Appropriate Number of Terms to Describe the Interaction	47
3. More on the Analysis of Multiplicative Interaction Models	50
3.1 Estimating σ^2	51
3.2 Tests On Main Effects	51
3.3 Inferences on the Interaction Parameters	52
3.4 Improved Estimation of σ^2 in the Multiplicative Interaction Model	56
3.5 Simultaneous Tests on the α and γ 's	60
4. Half-Normal Plots	64
4.1 Construction of Half-Normal Plots	65
4.2 Estimating σ from a Half-Normal Plot	67
4.3 Use of Half-Normal Plots in Interpreting Nonreplicated Experiments	68

5. Analyzing A Two-Way Treatment Structure in a Split-Plot Design with No Replications	71
5.1 A Sausage Example	72
5.2 An Incorrect Analysis of the Sausage Data	72
5.3 Testing for Sausage Type*Judge Interaction	74
5.4 Comparing Sausage Means	75
6. A Three-Way Treatment Structure with No Replications	79
6.1 An Example	80
6.2 Testing for Expert*Treatment Interaction	82
6.3 Analyzing Treatments for Interaction	82
6.4 Treatment Contrasts	84
7. 2^n Factorial Treatment Structures	92
7.1 Notation	93
7.2 Main Effects and Interaction Effects	94
7.3 Estimating σ^2 in 2^n Factorial Experiments	97
7.4 Analyzing 2^n Factorial Experiments for Significant Treatment Effects	98
7.5 Completing the Analysis	102
8. Blocking 2^n Factorial Treatment Structures	109
8.1 A 2^3 Experiment in Two Blocks of Size 4	110
8.2 2^n Factorial Experiments in Two Blocks of Size 2^{n-1}	111
8.3 Analyzing 2^n Factorial Experiments Conducted in Two Blocks of Size 2^{n-1}	113
8.4 Confounding 2^n Factorial Experiments in More Than Two Blocks	114
8.5 Analyzing Confounded 2^n Factorial Experiments When Experimental Units Have Been Grouped into More Than Two Blocks	119
8.6 An Example	120
9. Fractional Replications of 2^n Factorial Treatment Structures	130
9.1 A One-Half Replicate of a 2^3 Factorial Experiment	131
9.2 A One-Half Replicate of a 2^5 Factorial Experiment	134
9.3 The Analysis of Fractional Factorial Experiments	135

9.4	Smaller Fractions of 2^n Factorial Experiments	139
9.5	3^n Factorial Experiments	144
10.	Polynomial Model Approximations	147
10.1	A Cautionary Note	148
10.2	Choosing a Degree	150
10.3	An Example	150
11.	Quadratic Response Surface Models	154
11.1	Analyzing a Quadratic Response Surface Model	155
11.2	An Example	156
	Appendices	169
	References	194
	Index	197
