<b>Preface</b>	<b>vii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 The Cardinal Series . . . . .	1
1.2 History . . . . .	2
<b>2 Fundamentals of Fourier Analysis and Stochastic Processes</b>	<b>7</b>
2.1 Signal Classes . . . . .	7
2.2 The Fourier Transform . . . . .	9
2.2.1 The Fourier Series . . . . .	11
2.2.1.1 Convergence . . . . .	11
2.2.1.2 Orthogonal Basis Functions . . . . .	12
2.2.2 Some Elementary Functions . . . . .	13
2.2.3 Some Transforms of Elementary Functions . . . . .	18
2.2.4 Other Properties . . . . .	21
2.3 Stochastic Processes . . . . .	22
2.3.1 First and Second Order Statistics . . . . .	22
2.3.2 Stationary Processes . . . . .	23
2.3.2.1 Power Spectral Density . . . . .	23
2.3.2.2 Some Stationary Noise Models . . . . .	24
2.3.2.3 Linear Systems with Stationary Stochastic Inputs . . . . .	25
2.4 Exercises . . . . .	26
<b>3 The Cardinal Series</b>	<b>33</b>
3.1 Interpretation . . . . .	33
3.2 Proofs . . . . .	35
3.2.1 Using Comb Functions . . . . .	35

3.2.2	Fourier Series Proof . . . . .	37
3.2.3	Papoulis' Proof . . . . .	38
3.3	Properties . . . . .	38
3.3.1	Convergence . . . . .	39
3.3.1.1	For Finite Energy Signals . . . . .	39
3.3.1.2	For Bandlimited Functions with Finite Area Spectra . . . . .	40
3.3.2	Trapezoidal Integration . . . . .	41
3.3.2.1	Of Bandlimited Functions . . . . .	41
3.3.2.2	Of Linear Integral Transforms . . . . .	42
3.3.2.3	Parseval's Theorem for the Cardinal Series . . . . .	49
3.3.3	The Time-Bandwidth Product . . . . .	50
3.4	Application to Spectra Containing Distributions . . . . .	50
3.5	Application to Bandlimited Stochastic Processes . . . . .	52
3.6	Exercises . . . . .	54
<b>4</b>	<b>Generalizations of the Sampling Theorem</b> . . . . .	<b>57</b>
4.1	Generalized Interpolation Functions . . . . .	57
4.1.1	Oversampling . . . . .	58
4.1.1.1	Sample Dependency . . . . .	58
4.1.1.2	Relaxed Interpolation Formulae . . . . .	63
4.1.2	Criteria for Generalized Interpolation Functions . . . . .	64
4.1.2.1	Interpolation Functions . . . . .	66
4.1.2.2	Reconstruction from a Filtered Signal's Samples . . . . .	67
4.2	Papoulis' Generalization . . . . .	68
4.2.1	Derivation . . . . .	71
4.2.2	Interpolation Function Computation . . . . .	75
4.2.3	<i>Example Applications</i> . . . . .	76
4.2.3.1	Recurrent Nonuniform Sampling . . . . .	76
4.2.3.2	Interlaced Signal-Derivative Sampling . . . . .	77
4.2.3.3	Higher Order Derivative Sampling . . . . .	80
4.2.3.4	Effects of Oversampling . . . . .	81
4.3	Derivative Interpolation . . . . .	82
4.3.1	Properties of the Derivative Kernel . . . . .	83

4.4	A Relation Between the Taylor and Cardinal Series	88
4.5	Sampling Trigonometric Polynomials . . . . .	88
4.6	Sampling Theory for Bandpass Functions . . . . .	92
4.6.1	Heterodyned Sampling . . . . .	93
4.6.2	Direct Bandpass Sampling . . . . .	96
4.7	A Summary of Sampling Theorems for Directly Sampled Signals . . . . .	97
4.8	Lagrangian Interpolation . . . . .	100
4.9	Kramer's Generalization . . . . .	102
4.10	Exercises . . . . .	104
<b>5</b>	<b>Sources of Error</b>	<b>111</b>
5.1	Effects of Additive Data Noise . . . . .	111
5.1.1	On Cardinal Series Interpolation . . . . .	111
5.1.1.1	Interpolation Noise Level . . . . .	112
5.1.1.2	Effects of Oversampling and Filtering . . . . .	113
5.1.2	Interpolation Noise Variance for Directly Sampled Signals . . . . .	117
5.1.2.1	Interpolation with Lost Samples . . . . .	118
5.1.2.2	Bandpass Functions . . . . .	127
5.1.3	On Papoulis' Generalization . . . . .	129
5.1.3.1	Examples . . . . .	131
5.1.3.2	Notes . . . . .	132
5.1.4	On Derivative Interpolation . . . . .	136
5.1.4.1	A Lower Bound on the NINV . . . . .	138
5.1.4.2	Examples . . . . .	139
5.2	Jitter . . . . .	145
5.2.1	Filtered Cardinal Series Interpolation . . . . .	145
5.2.2	Unbiased Interpolation from Jittered Samples . . . . .	146
5.2.3	In Stochastic Bandlimited Signal Interpolation . . . . .	148
5.2.3.1	NINV of Unbiased Restoration . . . . .	150
5.2.3.2	Examples . . . . .	151
5.3	Truncation Error . . . . .	153
5.3.1	An Error Bound . . . . .	153

5.3.2	Noisy Stochastic Signals . . . . .	156
5.4	Exercises . . . . .	163
<b>6</b>	<b>The Sampling Theorem in Higher Dimensions</b>	<b>167</b>
6.1	Multidimensional Fourier Analysis . . . . .	167
6.1.1	Properties . . . . .	169
6.1.1.1	Separability . . . . .	169
6.1.1.2	Rotation, Scale and Transposition . . . . .	171
6.1.1.3	Polar Representation . . . . .	176
6.1.2	Fourier Series . . . . .	178
6.1.2.1	Multidimensional Periodicity . . . . .	178
6.1.2.2	The Fourier Series Expansion . . . . .	181
6.2	The Multidimensional Sampling Theorem . . . . .	184
6.2.1	The Nyquist Density . . . . .	187
6.2.2	Generalized Interpolation Functions . . . . .	192
6.2.2.1	Tightening the Integration Region . . . . .	192
6.2.2.2	Allowing Slower Roll Off . . . . .	195
6.3	Restoring Lost Samples . . . . .	195
6.3.1	Restoration Formulae . . . . .	195
6.3.2	Noise Sensitivity . . . . .	198
6.3.2.1	Filtering . . . . .	200
6.3.2.2	Deleting Samples from Optical Images . . . . .	200
6.4	Periodic Sample Decimation and Restoration . . . . .	203
6.4.1	Preliminaries . . . . .	204
6.4.2	First Order Decimated Sample Restoration . . . . .	208
6.4.3	Sampling Below the Nyquist Density . . . . .	211
6.4.4	Higher Order Decimation . . . . .	215
6.5	Raster Sampling . . . . .	216
6.6	Exercises . . . . .	219
<b>7</b>	<b>Continuous Sampling</b>	<b>225</b>
7.1	Interpolation From Periodic Continuous Samples . . . . .	228
7.1.1	The Restoration Algorithm . . . . .	230

7.1.2	Noise Sensitivity . . . . .	239
7.1.2.1	White Noise . . . . .	239
7.1.2.2	Colored Noise . . . . .	242
7.1.3	Observations . . . . .	244
7.1.3.1	Comparison with the NINV of the Cardinal Series . . . . .	244
7.1.3.2	In the Limit as an Extrapolation Algorithm . . . . .	244
7.1.4	Application to Interval Interpolation . . .	245
7.2	Prolate Spheroidal Wave Functions . . . . .	254
7.2.1	Properties . . . . .	254
7.2.2	Application to Extrapolation . . . . .	257
7.2.3	Application to Interval Interpolation . . .	259
7.3	The Papoulis-Gerchberg Algorithm . . . . .	260
7.3.1	The Basic Algorithm . . . . .	260
7.3.2	Proof of the PGA using PSWF's . . . . .	266
7.3.3	Geometrical Interpretation in a Hilbert Space . . . . .	268
7.3.4	Remarks . . . . .	270
7.4	Exercises . . . . .	271
<b>Appendix</b>		<b>279</b>
<b>Index</b>		<b>320</b>
