

Perspectives on the Computer Revolution

Second Edition

*Edited
with commentaries
by*

Zenon W. Pyllyshyn

University of Western Ontario, London, Canada

and

Liam J. Bannon

Aarhus University, Aarhus, Denmark

**ABLEX PUBLISHING CORPORATION
NORWOOD, NEW JERSEY**

TABLE OF CONTENTS

Acknowledgments	ix
Introduction to the Second Edition	xiii
About the Editors	xv
I. Some Landmarks in the History of Computers	1
1 Some Perspectives on the Early History of Computers (1970) <i>Thomas M. Smith</i>	5
2 Of the Analytical Engine (1864) <i>Charles Babbage</i>	15
3 Proposed Automatic Calculating Machine (1937) <i>Howard Aiken</i>	29
4 Preliminary Discussion of the Logical Design of an Electronic Computing Instrument (1946) <i>Arthur W. Burks, Herman H. Goldstine, and John von Neumann</i>	39
5 As We May Think (1945) <i>Vannevar Bush</i>	49
Notes and Suggestions for Further Reading—Section I	63
II. Thinking Machines and Intelligence	65
6 The Fourth Discontinuity (1967) <i>Bruce Mazlish</i>	71
7 Computing Machinery and Intelligence (1950) <i>A.M. Turing</i>	85
8 Computer Science as Empirical Inquiry: Symbols and Search (1976) <i>Allen Newell and Herbert A. Simon</i>	109
9 What is Artificial Intelligence? (Extract from COSERS Report, 1980) <i>Zenon W. Pylyshyn et al.</i>	135

10	Algorithms (1960) <i>B.A. Trakhtenbrot</i>	203
11	Computers, Knowledge, and the Human Mind (1987) <i>Zenon W. Pylyshyn</i>	223
	Notes and Suggestions for Further Reading—Section II	239
III.	Human–Computer Interaction	243
12	The Trouble with UNIX (1981) <i>Donald A. Norman</i>	249
	Reflections on “The Trouble with UNIX”—Postscript 1987	259
13	Designing the Star User Interface (1982) <i>David Canfield Smith, Charles Irby, Ralph Kimball, Bill Verplank, and Eric Harslem</i>	261
14	Training Wheels in a User Interface (1984) <i>John M. Carroll and Caroline Carrithers</i>	285
	Postscript: 1987 <i>John M. Carroll</i>	298
15	The Pioneering Work of Douglas C. Engelbart (1987) <i>Liam J. Bannon</i>	301
	Suggestions for Further Reading—Section III	307
IV.	Applications of Computing	311
16	Industrial Robots on the Line (1982) <i>Robert Ayres and Steve Miller</i>	317
	<i>Robots on the Line</i> Revisited—Postscript, 1988 <i>Steve Miller</i>	335
17	Utopia: Where Workers Craft New Technology (1985) <i>Robert Howard</i>	341
18	What is Office Automation? (1980) <i>Michael Hammer and Marvin Sirbu</i>	351
19	Personal Computers and Education (1980, 1984) <i>James A. Levin and Yaakhov Kareev</i>	369
	Postscript: September 1987 <i>James A. Levin</i>	394
	Suggestions for Further Reading—Section IV	397

V. Social Dimensions of Computing	401
20 The Destruction of Machines in Erewhon (1872) <i>Samuel Butler</i>	407
21 The Technological Society (1954) <i>Jacques Ellul</i>	415
22 On the Impact of the Computer on Society (1972) <i>Joseph Weizenbaum</i>	431
23 What Computers Mean for Man and Society (1977) <i>Herbert A. Simon</i>	445
24 Theoretical Perspectives in Social Analyses of Computerization (1988) <i>Rob Kling</i>	459
Postscript 1988 <i>Rob Kling</i>	504
25 Engineers and the Work that People Do (1981) <i>H.H. Rosenbrock</i>	519
Suggestions for Further Reading—Section V	529
VI. Epilogue	533
26 The Computer and the Poet (1966) <i>Norman Cousins</i>	535
Author Index	537
Subject Index	543
