Preface

v

## 1 Introduction

1

- 1-1 The Scope of Chemistry 2
- 1-2 Methods of Science 3
- 1-3 Basic Terms 6
- 1-4 Measurements 10

## PART ONE

### THE STRUCTURE AND COMPOSITION OF MATTER

21

## 2 The Atomic Model

23

- 2-1 Atomism 23
- 2-2 Some Laws of Matter 24

ix

2-3	Dalton's Atomic Theory	25	
2-4	Evidence of Subatomic Particles	26	
2-5	Modern Atomic Theory	34	
2-6	Elements: Names and Symbols	36	
2-7	Atomic Weights	37	
2-8	The Gram-Atom, Avogadro's Number, and the Mole	41	
<b>3</b>	<b>Formulas, Equations, and Stoichiometry</b>		<b>47</b>
3-1	Formulas	47	
3-2	Chemical Equations	52	
3-3	Stoichiometry	55	
3-4	Calculation of Yield	63	
3-5	Chemical Analysis	64	
	<b>ELEMENTS</b>		
<b>4</b>	<b>Classification of the Elements</b>		<b>81</b>
4-1	The Modern Periodic Table	86	
4-2	Periodic Relationships	87	
<b>5</b>	<b>The Electronic Structure of Atoms</b>		<b>97</b>
5-1	The Nature of Light and Emission Spectra	98	
5-2	The Bohr Model of the Atom	104	
5-3	The Wave Model of the Atom	109	
5-4	Rationalization of Periodic Trends	124	
	<b>COMPOUNDS</b>		
<b>6</b>	<b>Ionic Compounds</b>		<b>131</b>
6-1	Types of Ions	134	
6-2	Nomenclature of Ionic Compounds	136	
6-3	Potential Energy of Ionic Configurations	140	
6-4	Ionic Lattices	145	
<b>7</b>	<b>Covalent Compounds</b>		<b>153</b>
7-1	The Stability of Covalent Compounds	153	
7-2	Molecular Parameters	154	

7-3	The Lewis Model	157
7-4	The Nomenclature of Covalent Compounds	163
7-5	The Valence Bond Model	170
7-6	Molecular Orbital Model	185

## **8****Molecular Geometry****199**

8-1	The Geometry of Molecules	199
8-2	The Dynamics of Molecular Geometry	206
8-3	Isomerism	208
8-4	Absorption of Radiant Energy	215

## **MATTER IN BULK**

## **9****Solids and Liquids****231**

The Solid State	232	
9-1	Types of Crystals	232
9-2	Properties of Crystals	236
9-3	Intermolecular Forces	240
9-4	Crystal Structure	244
The Liquid State	254	
9-5	Properties of Liquids	254
9-6	The Hydrogen Bond	263

## **10****Gases and Transitions between States****275**

The Gaseous State	275	
10-1	The Ideal Gas Laws	276
10-2	The Ideal Gas Equation	286
10-3	Dalton's Law of Partial Pressures	290
10-4	Diffusion of Gases	292
10-5	The Kinetic Molecular Theory	295
10-6	Real Gases: Deviations from Ideality	299
Transitions between States	304	
10-7	Enthalpy	304
10-8	Entropy	305
10-9	Free Energy	306

## **11****Solutions****315**

11-1	The Solution Process	316
11-2	Solubility	319

11-3	The Energetics of Solution	324
11-4	Concentrations of Solutions	328
11-5	Properties of Solutions	335
11-6	Molecular Weight Determinations	344
11-7	Electrolyte Solutions	346
11-8	The Atmosphere: A Gaseous Solution	355
11-9	Colloids	361

## PART TWO

# THE REACTIONS OF MATTER 371

## 12 Rates of Reactions 373

12-1	Factors that Determine Reaction Rates	374
12-2	Theory of Reaction Rates	379
12-3	Rationalization of Rate-Determining Factors	385
12-4	Determination of Rate Laws	388
12-5	Variation of Reaction Rate with Time	392
12-6	The Arrhenius Equation	401
12-7	Reaction Mechanisms	405
12-8	Photochemical Reactions	407

## EXTENT OF REACTION

## 13 Equilibrium 417

13-1	Equilibrium	419
13-2	The Equilibrium Constant	420
13-3	The Equilibrium Constant as a Measure of Extent	431
13-4	The Effect of Concentration on Extent	433
13-5	The Effect of Temperature on Extent	438
13-6	Le Châtelier's Principle	438

## 14 Thermochemical Determinants of Extent 447

14-1	The Laws of Thermodynamics	448
14-2	Standard Conditions	459
14-3	The Relationship between $\Delta G^0$ and $K$	460
14-4	Determination of $\Delta H^0$	462

14-5	Determination of $\Delta S^\circ$	468
14-6	Determination of $\Delta G^\circ$	470
14-7	Energy Sources and Consumption	473

## TYPES OF REACTION

### **15 Ion-Combination Reactions** **487**

15-1	The Driving Force of Ion-Combination Reactions	489
15-2	Precipitation Reactions	492
15-3	The Effect of Electrolytes on Solubility	498
15-4	Precipitation and the Solubility Product	505
15-5	Precipitation Reactions in Qualitative Analysis	507
15-6	Equivalent Weights in Precipitation Reactions	509

### **16 Proton-Transfer Reactions** **517**

16-1	Proton-Transfer Reactions	519
16-2	Acid and Base Strengths	522
16-3	Extents of Proton-Transfer Reactions	528
16-4	Quantitative Aspects of Proton-Transfer Equilibria in Aqueous Solution	529

### **17 Electron-Sharing Reactions** **575**

17-1	Addition Reactions	576
17-2	Extent of Lewis Addition Reactions	584
17-3	Base-Displacement Reactions	591
17-4	Acid-Displacement Reactions	595

### **18 Electron-Transfer Reactions** **603**

18-1	Oxidation Numbers	604
18-2	Half-Reactions	607
18-3	Redox Couples	610
18-4	Voltaic Cells	611
18-5	Strengths of Oxidizing Agents and the Spontaneity of Reactions	620
18-6	Standard Potentials and the Equilibrium Constant	623
18-7	Oxidation Potentials	626
18-8	Concentration Cells	628
18-9	Some Voltaic Cells of Practical Usefulness	629

- 18-10 Fuel Cells 631  
 18-11 Electrolytic Cells 632

## PART THREE

# THE CHEMISTRY OF THE ELEMENTS 649

## 19 The Origin of the Elements 651

- Nuclear Phenomena 652  
 19-1 Nuclear Forces 652  
 19-2 Neutron-Proton Ratio 656  
 19-3 Natural Radioactivity 660  
 19-4 Rate of Disintegration 661  
 19-5 Radiocarbon Dating 665  
 19-6 Fission and Fusion 667  
 19-7 Induced Nuclear Transformations 669  
 19-8 Applications of Isotopes 670  
 Genesis of the Elements 672  
 19-9 Birth of the Universe 672  
 19-10 Chemical Evolution 677

## 20 Hydrogen 689

- 20-1 Abundance and Properties 689  
 20-2 Compounds 691  
 20-3 Hydrogen as a Fuel 698  
 20-4 Water 699

## REPRESENTATIVE ELEMENTS

## 21 The s-Fillers 713

- 21-1 The Alkali Metals 713  
 21-2 The Alkaline Earth Metals 718  
 21-3 Properties Common to the Alkali and Alkaline Earth Metals 720  
 21-4 The Unique Behavior of First-Row Elements 725

## 22 The p-Fillers 731

- 22-1 The Halogens 732  
 22-2 The Group IV Elements 742

# TRANSITION ELEMENTS

## 23 The *d*-Fillers

767

23-1	Coordination Compounds	770
23-2	Metallurgy	789

### APPENDIX 1

Constants and Conversion Factors

801

### APPENDIX 2

Atomic and Ionic Radii (nm)

802

### APPENDIX 3

Ionization Energies of Gaseous Atoms in kJ/mol (kcal/mol)

803

### APPENDIX 4

Electron Affinities kJ/mol (kcal/mol)

805

### APPENDIX 5

Bond Energies and Bond Lengths

806

### APPENDIX 6

Molecular Parameters for Selected Simple Molecules

809

### APPENDIX 7

Standard Enthalpies and Free Energies of Formation and  
Absolute Entropies at 25 °C

812

### APPENDIX 8

Solubility Product Constants ( $K_{sp}$ )

819

### APPENDIX 9

Acid and Base Dissociation Constants in Water at 25 °C

821

<b>APPENDIX 10</b> Standard Electrode Potentials	823
<b>APPENDIX 11</b> Overall Formation Constants of Coordination Compounds	825
<b>APPENDIX 12</b> Vapor Pressures of Water (mm Hg) from 0 to 100 °C	826
<b>APPENDIX 13</b> Mathematical Operations	827
<b>APPENDIX 14</b> Four-Place Common Logarithms	841
Answers to Selected Problems	845
Index	863
