
Contents

Contents of Volume 3	xv
--------------------------------	----

Chapter 1. A Priori Geometry Predictions *J. A. Pople*

1. Introduction	1
2. Equilibrium Geometries by Hartree–Fock Theory	2
2.1. Restricted and Unrestricted Hartree–Fock Theories	2
2.2. Basis Sets for Hartree–Fock Studies	4
2.3. Hartree–Fock Structures for Small Molecules	6
2.4. Hartree–Fock Structures for Larger Molecules	12
3. Equilibrium Geometries with Correlation	18
4. Predictive Structures for Radicals and Cations	20
5. Conclusions	23
References	24

Chapter 2. Barriers to Rotation and Inversion *Philip W. Payne and Leland C. Allen*

1. Introduction	29
1.1. Relation to Other Chapters in Volumes 3 and 4	29
1.2. Other Reviews	29
1.3. Historical Notes	30
2. Assessment of Computational Methods	30
2.1. The Correlation Energy	31
2.2. Survey of Recent Barrier Calculations	34
2.3. Geometry Optimization and Vibronic Coupling	46
2.4. Discussion of Tabulated Barrier Calculations	51
2.5. Extension to Large Molecules	56

3. Methods for Analyzing Rotational Barrier Mechanisms	57
3.1. Bond Orbitals and Localized Orbitals	58
3.2. <i>N</i> -Center Energy Partitions	66
3.3. Fourier Analysis	68
3.4. Energy Components	69
3.5. Hellmann–Feynman Theorems	79
3.6. Charge Distributions	85
4. Semiempirical Models	90
4.1. Orbital Interaction Models	90
4.2. Dominant Orbital Theories and Walsh–Mulliken Diagrams	92
4.3. Empirical Potentials	93
References	96

Chapter 3. Hydrogen Bonding and Donor–Acceptor Interactions

Peter A. Kollman

1 Introduction	109
2. Theoretical Methods	110
2.1. <i>Ab Initio</i> Methods for Studying H-Bond Potential Surfaces	110
2.2. Methods for Evaluating the H-Bond Energy Components	112
3. Observable Properties of Hydrogen-Bonded and Other Donor–Acceptor Complexes	114
3.1. Structure and Binding Energy	114
3.2. Spectroscopic Properties	124
3.3. Summary	129
4. Generalizations about the Hydrogen Bond	131
4.1. H-Bond Structure	131
4.2. Contributions to the H-Bond Energy	135
4.3. Charge Redistribution and Charge Transfer	137
4.4. The Inductive Effect on H Bonds and Proton Affinities	139
4.5. What Makes a Hydrogen Bond Unique?	141
4.6. The Impact of the <i>Ab Initio</i> Calculations on Semiempirical and Model Calculations	143
5. Summary	143
References	144

Chapter 4. Direct Use of the Gradient for Investigating Molecular Energy Surfaces

Péter Pulay

1. Gradient Method Versus Pointwise Calculations	153
2. Calculation of the Energy Gradient from SCF Wave Functions	155
2.1. Structure of the Wave Function	155
2.2. First Derivative of the SCF Energy	156
2.3. Definition of the Basis Set in a Distorted Molecule	159
2.4. Hellmann–Feynman Forces and Their Limitations	161
2.5. Computational Aspects	162
2.6. Transformation of Cartesian Forces and Force Constants to Internal Coordinates	165
3. Applications	167
3.1. Molecular Geometries and Reaction Paths	167
3.2. Force Constants	170
4. Analytical Calculation of Higher Energy Derivatives	179
References	181

Chapter 5. Transition Metal Compounds

A. Veillard and J. Demuynck

1. Introduction	187
2. The Technique of <i>Ab Initio</i> LCAO–MO–SCF Calculations	188
2.1. The Choice of the Basis Set	188
2.2. The Use of Molecular Symmetry	189
3. Bonding in Transition Metal Compounds	191
3.1. Bonding in “Classical” Complexes: CuCl_4^{2-}	192
3.2. Bonding in Complexes of π -Acceptor Ligands: $\text{Fe}(\text{CO})_5$	196
3.3. Bonding in Some Organometallics	197
4. The Concept of Orbital Energy and the Interpretation of Electronic and Photoelectron Spectra	207
4.1. Photoelectron Spectra	207
4.2. Electronic Spectra	210
5. Electronic Structure and Stereochemistry of Dioxygen Adducts of Cobalt–Schiff-Base Complexes	214
References	219

Chapter 6. Strained Organic Molecules

Marshall D. Newton

1. Introduction	223
2. The Nature of Strained Organic Molecules	224
2.1. Definition of Strain	224
2.2. Challenges to Theory	225
3. Theoretical Methods for Strained Organic Systems	232
3.1. Empirical and Semiempirical Methods	232
3.2. <i>Ab Initio</i> Methods and Basis Sets	233
3.3. Localized Molecular Orbitals	234
3.4. Reliability of <i>Ab Initio</i> Methods	234
4. Discussion of <i>Ab Initio</i> Results	244
4.1. Distorted Methane as a Model for Strained Hydrocarbons	244
4.2. Cyclopropane and Cyclobutane	246
4.3. Fused 3- and 4-Membered Ring Systems and the Nature of Bonding between Bridgehead Carbon Atoms	250
4.4. Propellanes	256
4.5. Strained Conjugated Organic Molecules	262
5. Summary	267
References	268

Chapter 7. Carbonium Ions: Structural and Energetic Investigations

Warren J. Hehre

1. Introduction	277
2. CH^+	298
3. CH_3^+	298
4. CH_5^+	299
5. C_2H^+	300
6. C_2H_3^+	300
7. C_2H_5^+	301
8. C_2H_7^+	302
9. C_3H^+	302
10. C_3H_3^+	303
11. C_3H_5^+	304
12. C_3H_7^+	308
13. C_4H_5^+	310
14. C_4H_7^+	313
15. C_4H_9^+	316

16.	$C_5H_5^+$	317
17.	$C_6H_7^+$	318
18.	$C_7H_7^+$	323
19.	$C_8H_9^+$	324
20.	Conclusion	328
	References	329

Chapter 8. Molecular Anions

Leo Radom

1.	Introduction	333
2.	Background	334
	2.1. Calculations of Electron Affinities	334
	2.2. A Less Ambitious Target	335
3.	Structural Studies	337
	3.1. Experimental Comparison	337
	3.2. The Methyl Anion	339
	3.3. Conformational Studies	339
4.	Heats of Reaction	342
	4.1. Proton Affinities	342
	4.2. Relative Acidities	343
	4.3. Anion Hydration	345
5.	Mechanistic Studies	348
	5.1. Electrocyclic Transformation of Cyclopropyl to the Allyl Anion	348
	5.2. Reaction of the Hydride Ion with Small Molecules	348
	5.3. The S_N2 Reaction	349
6.	Conclusions	352
	References	352

Chapter 9. Electron Spectroscopy

Maurice E. Schwartz

1.	Introduction	357
2.	Studies of Valence Electrons	358
	2.1. Self-Consistent Field Molecular Orbital Methods	358
	2.2. Methods Including Electron Correlation	363

3. Studies of Core Electrons	367
3.1. Use of Orbital Energies	367
3.2. Beyond Koopmans' Theorem: More Accurate Theoretical Models	371
4. Summary and Prospectus for the Future	376
References	377

Chapter 10. Molecular Fine Structure

Stephen R. Langhoff and C. William Kern

1. Introduction	381
2. Theory	382
2.1. Breit–Pauli Hamiltonian	383
2.2. The ZFS Parameters D and E	385
2.3. Magnitude of Fine-Structure Contributions	388
3. Computational Aspects	391
3.1. Matrix Element Reduction	392
3.2. Integral Evaluation	395
4. Numerical Studies of Fine Structure	403
4.1. Diatomic Molecules	403
4.2. Polyatomic Molecules	411
5. Phenomena Related to Fine Structure	419
5.1. Phosphorescence	419
5.2. Molecular Predissociation	423
6. Conclusions	427
Appendix. Vibration–Rotation Corrections to the ZFS Parameters	428
References	429
