

Oxidation and Reduction in Organic Synthesis

Timothy J. Donohoe

Reader in Organic Chemistry, University of Manchester

Series sponsor: AstraZeneca 

AstraZeneca is one of the world's leading pharmaceutical companies with a strong research base. Its skill and innovative ideas in organic chemistry and bioscience create products designed to fight disease in seven key therapeutic areas: cancer, cardiovascular, central nervous system, gastrointestinal, infection, pain control, and respiratory.

AstraZeneca was formed through the merger of Astra AB of Sweden and Zeneca Group PLC of the UK. The company is headquartered in the UK with over 50,000 employees worldwide. R&D centres of excellence are in Sweden, the UK, and USA with R&D headquarters in Södertälje, Sweden.

AstraZeneca is committed to the support of education in chemistry and chemical engineering.

OXFORD
UNIVERSITY PRESS

Contents

1	Introduction	1
2	Oxidation of heteroatoms attached to carbon	6
3	Oxidation of carbon–carbon double and triple bonds	13
4	Oxidation of activated carbon–hydrogen bonds	25
5	Oxidative cleavage reactions	37
6	Reduction of heteroatoms attached to carbon	45
7	Reduction of carbon–carbon double and triple bonds	52
8	Reduction of carbon–heteroatom double and triple bonds	62
9	Reductive cleavage reactions	75
