

CONTENTS

PREFACE	vii
CHAPTER I. KINEMATICS IN THREE DIMENSIONS	1
Introduction. The transformation law for vectors. Finite rotations. Successive rotations: Euler's angles. Angular velocity. Relative motion. Moving frames of reference. The acceleration of a particle. The general motion of a rigid body. Angular velocities about non-intersecting axes.	
CHAPTER II. SETS OF FORCES: EQUILIBRIUM	48
Introduction. Equilibrium. Equivalent sets of forces. The principle of virtual work. Other sets of line vectors.	
CHAPTER III. THE DYNAMICS OF A PARTICLE	82
General principles. A particle with one degree of freedom. The use of rotating and accelerated axes. The spherical pendulum. Motion on a surface of revolution. Motion relative to the rotating earth. The motion of a charged particle.	
CHAPTER IV. THE MOTION OF A SYSTEM OF PARTICLES	129
Description of the system. The dynamical variables. Conservation laws. The inertia matrix. Principal axes of inertia. Dynamical variables for rigid systems. The motion of a sphere.	
CHAPTER V. GYROSCOPIC MOTION, FREE ROTATION AND STEADY MOTION	177
Introduction. Rotation under no forces of bodies with kinetic symmetry. The steady motion of a gyroscope or top. The general motion of a top. Euler's dynamical equations. Free rotation. More general motions.	
CHAPTER VI. LAGRANGE'S EQUATIONS	232
Generalised methods. The dynamical variables. Generalised forces. Classification of constraints. Application of the principle of virtual work. Conservation laws. Ignorance of coordinates. The motion of a charged particle.	

CHAPTER VII. STABILITY OF MOTION	281
Introduction. Steady motion with two degrees of freedom. The stability of free rotation of a rigid body. The stability of a top. The gyro-compass. The stability of a rolling wheel.	
CHAPTER VIII. IMPULSIVE MOTION	306
Elementary discussion. Generalised methods. General theorems.	
CHAPTER IX. THE OSCILLATIONS OF A DYNAMICAL SYSTEM WITH A FINITE NUMBER OF DEGREES OF FREEDOM—NORMAL MODES	347
Introduction. Systems with two degrees of freedom. Stability of equilibrium : free oscillations of a system with n degrees of freedom. The oscillations of a linearly constrained system—Rayleigh's principle. A reciprocal theorem.	
CHAPTER X. THE VIBRATIONS OF STRINGS	386
The fundamental concepts of wave motion. Transverse vibrations. Normal modes. Forced vibrations and damping. Reflection and transmission at a discontinuity. Longitudinal vibrations. Application of Rayleigh's principle. Miscellaneous problems.	
CHAPTER XI. ANALYTICAL DYNAMICS	456
Introduction. Hamilton's principle. The principle of least action. Hamilton's equations of motion. Transformation theory : contact transformations. Infinitesimal contact transformations. The Hamilton-Jacobi equation.	
ANSWERS TO THE EXERCISES	497
INDEX	507
