

CONTENTS

PREFACE	vii
CHAPTER I. FOURIER SERIES	1
Introduction: Full-range series. The sine series and the cosine series. Fourier series in a range of arbitrary width. Double Fourier series. Applications of Fourier series. Parseval's theorem.	
CHAPTER II. THE LAPLACE TRANSFORMATION	43
Definitions – ordinary differential equations. Simultaneous ordinary differential equations with constant coefficients. Some theorems of the Laplace transformation – special functions. Partial differential equations.	
CHAPTER III. FUNCTIONS OF A COMPLEX VARIABLE	81
Introduction – definitions. Differentiation and integration of functions of a complex variable. Singularities. Conformal transformations. The theory of residues. The evaluation of definite integrals by contour integration.	
CHAPTER IV. FOURIER INTEGRALS AND TRANSFORMATIONS: THE INVERSION INTEGRAL FOR THE LAPLACE TRANSFORMATION	152
The Fourier integral. Fourier transforms. Examples of the use of sine and cosine transforms in the solution of boundary value problems in mathematical physics. The Laplace transformation and the inversion integral. Applications of the inversion integral to boundary value problems. The 'wave-packet' in quantum mechanics. Note on definitions.	
ANSWERS TO THE EXERCISES	193
