Preface to the Romanian edition . . . . .	9
Preface to the English edition . . . . .	11
<b>1 Euclidean tensors . . . . .</b>	<b>13</b>
1.1 <i>The tensor as an orthogonal invariant</i> . . . . .	13
1.1.1 Definition. Properties . . . . .	13
1.1.2 Operations with tensors and pseudotensors . . . . .	20
1.1.3 Structural properties . . . . .	35
1.2 <i>Tensors of second order</i> . . . . .	45
1.2.1 General properties . . . . .	45
1.2.2 Structural properties . . . . .	49
1.2.3 Eigenvalues and eigenvectors . . . . .	54
1.2.4 Properties of eigenvectors and eigenvalues . . . . .	59
1.2.5 Invariants of tensors of second order . . . . .	67
1.2.6 Additive decompositions of tensors of second order . . . . .	73
1.3 <i>Tensor fields</i> . . . . .	74
1.3.1 Differential operators . . . . .	74
1.3.2 Integral formulae . . . . .	78
<b>2 Tensors on linear spaces . . . . .</b>	<b>81</b>
2.1 <i>The tensor as an element of a linear space</i> . . . . .	81
2.1.1 Dual space . . . . .	81
2.1.2 Multilinear mappings . . . . .	87
2.2 <i>Tensors on Euclidean spaces</i> . . . . .	92
2.2.1 Euclidean and pseudo-Euclidean spaces . . . . .	92
2.2.2 Notions about tensors . . . . .	95
2.2.3 Tensors on Euclidean spaces . . . . .	99
<b>3 Applications to geometry . . . . .</b>	<b>101</b>
3.1 <i>Geometry of curves and surfaces</i> . . . . .	101
3.1.1 Geometry of curves . . . . .	101
3.1.2 Geometry of surfaces . . . . .	104

3.2	<i>Curvilinear co-ordinates</i> . . . . .	111
3.2.1	Arbitrary curvilinear co-ordinates . . . . .	111
3.2.2	Orthogonal curvilinear co-ordinates . . . . .	120
4	<b>Applications to mechanics of solids</b> . . . . .	131
4.1	<i>Mechanics of a rigid solid</i> . . . . .	131
4.1.1	Equations of equilibrium and motion of a rigid solid . . . . .	131
4.1.2	The rigid solid with a fixed point . . . . .	145
4.2	<i>Mechanics of deformable solids</i> . . . . .	152
4.2.1	Geometry and kinematics of deformation . . . . .	153
4.2.2	Mechanics of stresses . . . . .	161
5	<b>Applications to acoustics</b> . . . . .	175
5.1	<i>Plane progressive waves</i> . . . . .	175
5.1.1	The acoustic tensor. Properties . . . . .	175
5.1.2	Plane progressive waves . . . . .	177
5.2	<i>Free vibrations</i> . . . . .	180
5.2.1	Fundamental relations . . . . .	180
5.2.2	Characteristic vibrations . . . . .	182
6	<b>Applications to crystallography</b> . . . . .	185
6.1	<i>Generalities</i> . . . . .	185
6.1.1	Elements of crystallography . . . . .	185
6.1.2	Geometrical structure of crystals . . . . .	186
6.2	<i>The totality of possible crystalline classes</i> . . . . .	187
6.2.1	The concept of crystalline symmetry . . . . .	187
6.2.2	Derivation of all possible classes of crystal . . . . .	194
7	<b>Applications to the theory of time and space</b> . . . . .	199
7.1	<i>The aether</i> . . . . .	199
7.1.1	Inertial frames of reference . . . . .	199
7.1.2	Maxwell's electrodynamics . . . . .	202
7.1.3	Lorentz's electrodynamics . . . . .	206
7.2	<i>The Einsteinian time</i> . . . . .	212
7.2.1	The velocity of light in vacuo. The time of an inertial reference system . . . . .	212
7.2.2	The Lorentz-Poincaré-Einstein transformation . . . . .	217
7.3	<i>The four-dimensional world of events</i> . . . . .	224
7.3.1	The Minkowskian space-time . . . . .	224
7.3.2	The properties of the Minkowskian world . . . . .	229
7.3.3	The four-dimensional pseudo-Euclidean space—the mathematical model of the world of events . . . . .	233
8	<b>Applications to electromagnetism and to optics</b> . . . . .	243
8.1	<i>Relativistic kinematics</i> . . . . .	243
8.1.1	Velocity and composition of velocities . . . . .	243
8.1.2	Applications. Acceleration . . . . .	246

8.2	<i>The electromagnetic field</i> . . . . .	247
8.2.1	The relativistic interpretation of Lorentzian theory . . . . .	247
8.2.2	The ponderomotive action of the electromagnetic field . . . . .	253
8.3	<i>Electromagnetics and optics of moving media</i> . . . . .	263
8.3.1	The electromagnetic field <i>in vacuo</i> . . . . .	263
8.3.2	Dynamic and energy characteristics of the plane wave . . . . .	270
9	<b>Applications to the relativistic mechanics of a particle</b> . . . . .	275
9.1	<i>Dynamics of a particle</i> . . . . .	275
9.1.1	Mechanics and the principles of relativity . . . . .	275
9.1.2	Planck's dynamics. Rest mass and relativistic mass . . . . .	281
9.2	<i>Relativistic mechanics of a particle in the four-dimensional world of events</i> . . . . .	287
9.2.1	Minkowski's dynamics. The synthesis of conservation laws of momentum and energy . . . . .	287
9.2.2	Hyperbolic motion. The linear accelerator . . . . .	289
	Bibliography . . . . .	291
	Author index . . . . .	295
	Subject index . . . . .	297
