## PART I

### CHAPTER 1

|   |          |
|---|----------|
| <b>The Position of Factor Analysis in Psychological Research</b> . . . . .                          | <b>3</b> |
| 1.1. The ANOVA and CORAN Methods of Finding Significant Relations in Data . . . . .                 | 3        |
| 1.2. The Reason for the Salient Role of Statistics in the Biosocial Sciences . . . . .              | 4        |
| 1.3. What Is an Experiment? Bivariate and Multivariate Designs . . .                                | 5        |
| 1.4. Dimensions of Experiment and Their Relation to Historic Areas of Research . . . . .            | 6        |
| 1.5. The Relation of Experiment to the Inductive-Hypothetico-Deductive Method . . . . .             | 9        |
| 1.6. The Relative Power and Economies and the Mutual Utilities of ANOVA and CORAN Methods . . . . . | 11       |
| 1.7. Summary . . . . .  | 13       |

### CHAPTER 2

|  |           |
|--|-----------|
| <b>Extracting Factors: The Algebraic Picture</b> . . . . .   | <b>15</b> |
| 2.1. The Aims of Multivariate CORAN: Component Analysis, Cluster Analysis, and Factor Analysis . . . . . | 15        |
| 2.2. The Basic Factor Proposition: Correlation Size Related to Common Factor Size . . . . .              | 18        |
| 2.3. The Centroid or Unweighted Summation Extraction of Factor Components . . . . .                      | 23        |
| 2.4. The Principal Components or Weighted Summation Extraction .   | 28        |
| 2.5. Communality: Common (Broad) and Unique Variances . . . . .  | 31        |
| 2.6. Checking Back from Factor Matrices to Correlation Matrices . .                                      | 33        |

|  |           |
|--|-----------|
| 2.7. The Specification and Estimation Equations Linking Factors and Variables . . . . .            | 34        |
| 2.8. Summary . . . . .   | 37        |
| <br><b>CHAPTER 3</b>   |           |
| <b>Rotating Factors: The Geometric Picture . . . . .</b>   | <b>40</b> |
| 3.1. The Correlation Coefficient Geometrically Represented . . . . .                               | 40        |
| 3.2. Plotting Variables in Hyperspace from the $V_0$ Matrix . . . . .                              | 42        |
| 3.3. The Relation of Cluster Analysis to Factor Analysis . . . . .                                 | 44        |
| 3.4. The Effect of Factor Rotation on Factor Patterns . . . . .                                    | 46        |
| 3.5. The Possibility of a Unique Rotation and the Need to Find It . . . . .                        | 49        |
| 3.6. Summary . . . . .   | 50        |
| <br><b>CHAPTER 4</b>   |           |
| <b>Fixing the Number of Factors: The Scientific Model . . . . .</b>                                | <b>52</b> |
| 4.1. A Return to the "Number of Factors" Issue . . . . .   | 52        |
| 4.2. The Alternatives of Statistical and Psychometric Bases of Decision on Factor Number . . . . . | 56        |
| 4.3. Broader View of the Number of Factors Problem in the Light of the Scientific Model . . . . .  | 58        |
| 4.4. Practical Decision by the Scree Test and Maximum Likelihood . . . . .                         | 60        |
| 4.5. The Contrasting Properties of the Principal Components and Factor Models . . . . .            | 63        |
| 4.6. Summary . . . . .   | 68        |
| <br><b>CHAPTER 5</b>   |           |
| <b>Fixing the Number of Factors: The Most Practicable Psychometric Procedures . . . . .</b>        | <b>72</b> |
| 5.1. Fixing the Number of Factors by Deciding the Communalities . . . . .                          | 72        |
| 5.2. Deciding Number of Factors by Latent Root Plots: The Scree and K-G Tests . . . . .            | 76        |
| 5.3. The Empirical Support for the Scree Test from Plasmodes . . . . .                             | 77        |
| 5.4. The Empirical Support for the Scree Test from Internal Consistencies . . . . .                | 81        |
| 5.5. Ensuring Objectivity of Evaluation Procedure in the Scree Test . . . . .                      | 83        |
| 5.6. Findings in the Use of the K-G Test . . . . .   | 86        |
| 5.7. Proceeding from Factor Number to Sizes of Communalities . . . . .                             | 87        |
| 5.8. Summary . . . . .   | 89        |

**CHAPTER 6**

**The Theory of Unique Rotational Resolution by Confactor, Procrustes, and Simple Structure Principles . . . . . 92**

- 6.1. The Properties and Limitations of the Unrotated Dimension Matrices,  $\underline{V}_0$  and  $V_0$  . . . . . 92
- 6.2. The Rationale for Rotation by Hypothesis-Testing and Hypothesis-Creating Principles . . . . . 95
- 6.3. Hypothesis-Creating Rotation: By the Confactor Principle . . . 98
- 6.4. Hypothesis-Creating Rotation: By the Simple Structure Principle . . . . . 102
- 6.5. Illustration of Simple Structure Properties in Real Data . . . . . 105
- 6.6. Some Problems of Research Design and Interpretation in Simple Structures . . . . . 112
- 6.7. Summary . . . . . 115

**CHAPTER 7**

**The Techniques of Simple Structure Rotation . . . . . 118**

- 7.1. Transforming the Unrotated to a Rotated Matrix . . . . . 118
- 7.2. The Definition of a Matrix and Matrix Multiplication . . . . . 121
- 7.3. The Nature of the Transformation Matrix in Hyperspace . . . . 124
- 7.4. The Rationale for Oblique, Correlated Factors, and the Computation of Their Correlations . . . . . 126
- 7.5. Rotation by Visual Inspection of Single Plane Plots . . . . . 128
- 7.6. Analytical and Topological Automatic Rotation Programs . . . 130
- 7.7. Comparative Studies of the Strengths and Weaknesses of Various Automatic Programs . . . . . 136
- 7.8. The Tactics of Reaching Maximum Simple Structure . . . . . 140
- 7.9. ROTOPLOT: The Calculations in Successive Shifts . . . . . 146
- 7.10. Summary . . . . . 151

**CHAPTER 8**

**More Refined Issues in Rotation and the Use of Oblique Factors . . . . 155**

- 8.1. More Refined Tactics from Experience Necessary in SS (Simple Structure) Resolution . . . . . 155
- 8.2. Three Tactical Principles in Controlled Rotation . . . . . 156
- 8.3. Discussion of Matrix Inverses and Transposes in the Calculation of Correlations among Reference Vectors and Factors . . 159
- 8.4. Reaching Correct Primary Factor Correlations in SS Rotation . . . . . 161
- 8.5. Singular and Non-Gramian Matrices and the Collapse of Factors . . . . . 164

|                   |   |            |
|-------------------|---|------------|
| 8.6.              | Geometers' Hyperplanes and the Use of Rotation as a Check on Factor Number . . . . .                                    | 169        |
| 8.7.              | The Evaluation of a Simple Structure . . . . .  | 175        |
| 8.8.              | Reference Vectors and Factors, Loadings and Correlations Distinguished . . . . .  | 177        |
| 8.9.              | Which VD Matrix Should Direct the Simple Structure Search? . . . . .  | 183        |
| 8.10.             | An Overview of SS Alongside Other Rotational Principles . . . . .   | 186        |
| 8.11.             | Summary . . . . .   | 188        |
| <b>CHAPTER 9</b>  |   |            |
|                   | <b>Higher-Order Factors: Models and Formulas . . . . .</b>  | <b>192</b> |
| 9.1.              | The Need to Recognize the Existence of Higher-Order Factor Influences . . . . .   | 192        |
| 9.2.              | Extracting Factors from Rotated Primaries and from Correlations of Primary Scales and Batteries . . . . .               | 193        |
| 9.3.              | Factor Interrelations: The Possibilities of Strata, Reticular, and Other Scientific Models . . . . .                    | 198        |
| 9.4.              | The Theory of Higher-Strata Factors: New Influences or Spiral Feedback Emergents? . . . . .                             | 204        |
| 9.5.              | Calculating Loadings of Higher-Strata Factors Directly on Variables: The C-W Formula . . . . .                          | 208        |
| 9.6.              | The Ultimate Factor Theory: The Stratified Uncorrelated Determiner Model . . . . .                                      | 210        |
| 9.7.              | The Calculations for the SUD Model, Beginning with the Schmid-Leiman Formula . . . . .                                  | 213        |
| 9.8.              | Some Bases of Decision among Alternative Models of Factor Action . . . . .  | 220        |
| 9.9.              | Summary . . . . .   | 223        |
| <b>CHAPTER 10</b> |   |            |
|                   | <b>The Identification and Interpretation of Factors . . . . .</b>   | <b>229</b> |
| 10.1.             | What Are the Bases of Identification and Interpretation? . . . . .  | 229        |
| 10.2.             | Identification and Interpretation from Loading Patterns . . . . .   | 231        |
| 10.3.             | The Nature of the Five Most Common Variable Dimension Relation Matrices with an Introduction to Factor Scores . . . . . | 234        |
| 10.4.             | Five More Esoteric Variable Dimension Relation Matrices . . . . .   | 238        |
| 10.5.             | Discussion and Illustration of Relations of VD Matrices . . . . .   | 244        |
| 10.6.             | Planning for Factor Identification by Matching: The Four Experimental Possibilities . . . . .                           | 246        |
| 10.7.             | Indices for Matching: The Congruence Coefficients $r_c$ . . . . .   | 251        |
| 10.8.             | Indices for Matching: The Salient Variable Similarity Index $s$ . . . . .   | 255        |
| 10.9.             | Indices for Matching: The Configurative Method . . . . .  | 260        |

|  |            |
|--|------------|
| <b>Contents</b>  | <b>xix</b> |
| 10.10. Comparative Properties of Various Approaches to Matching, Including $r_p$ . . . . . | 265        |
| 10.11. Summary . . . . .   | 268        |

## PART II

### CHAPTER 11

|  |            |
|--|------------|
| <b>Factor Measures: Their Construction, Scoring, Psychometric Validity, and Consistency . . . . .</b>                                    | <b>273</b> |
| 11.1. Orientation of Factor Analysis to Psychometric Practice . . .  | 274        |
| 11.2. The Initial, Common Form of Estimation of Scores for Primaries and Higher-Strata Factors . . . . .                                 | 274        |
| 11.3. Specifics and the Practical-versus-Complete Theoretical Specification Equation . . . . .   | 275        |
| 11.4. Is Estimation Necessarily a Circular Process? . . . . .  | 277        |
| 11.5. Estimation Problems Peculiar to Higher-Strata Factors . . . . .  | 278        |
| 11.6. Basic Concepts Regarding Types of Validity . . . . .   | 279        |
| 11.7. Definitions of Homogeneity, Reliability, Factor Trueness, and Uniractic and Univocal Batteries . . . . .                           | 282        |
| 11.8. Relations among Homogeneity, Reliability, Transferability, and Validity . . . . .  | 286        |
| 11.9. The Arguments for Low Item or Subtest Homogeneity in Constructing Tests for Factor Estimation . . . . .                            | 289        |
| 11.10. More Theoretical Issues in Factor Score Estimations . . . . .   | 293        |
| 11.11. Approximate Estimation Procedures . . . . .   | 297        |
| 11.12. Some Special Issues of Factor Estimation among Oblique Factors . . . . .  | 301        |
| 11.13. Estimation of Factor Scores Required for Comparisons across Different Populations: The Equipotent and Isopodic Concepts . . . . . | 311        |
| 11.14. Summary . . . . .   | 318        |

### CHAPTER 12

|   |            |
|---|------------|
| <b>Broader Experimental Designs and Uses: The Data Box and the New Techniques . . . . .</b> | <b>321</b> |
| 12.1. Perspective on Uses of Factor Analysis in General Experimental Work . . . . .         | 322        |
| 12.2. The BDRM Initially Studied as the Covariation Chart . . . . .                         | 322        |
| 12.3. The Misspent Youth of Q Technique . . . . .   | 325        |
| 12.4. Choice and Sampling Principles for Relatives and Referees . .                         | 327        |
| 12.5. The Complete BDRM . . . . .   | 329        |
| 12.6. The Five Signatures of a Psychological Event . . . . .                                | 331        |
| 12.7. The Factoring of Facets, Faces, Frames, and Grids . . . . .                           | 334        |

|        |   |     |
|--------|---|-----|
| 12.8.  | Sampling and Standardization of Measures across the Five Sets . . . . .   | 336 |
| 12.9.  | The Nature of Factors from Each of the Ten Main Techniques . . . . .  | 339 |
| 12.10. | Differential R Technique (dR Technique) . . . . .   | 340 |
| 12.11. | The Problem of Difference Scores and Their Scaling . . . . .  | 343 |
| 12.12. | The Experimental Design Called P Technique . . . . .  | 347 |
| 12.13. | Trend and Cycle Problems Peculiar to P Technique . . . . .  | 348 |
| 12.14. | P Technique with Manipulation, Lead and Lag, and Chain Designs . . . . .  | 350 |
| 12.15. | The Relation of dR- and P-Technique Factors . . . . .   | 353 |
| 12.16. | Manipulative and Causal-Analysis Designs in Learning and Other Factor Analytic Treatment Experiments . . . . .      | 355 |
| 12.17. | The Relation of Factors from Various BDRM Facets, Faces, Frames, and Grids: <i>n</i> -Way Factor Analysis . . . . . | 361 |
| 12.18. | Comparison of <i>n</i> -Way (Disjunct and Conjoint) and <i>n</i> -Mode Factor Analysis . . . . .                    | 369 |
| 12.19. | Summary . . . . .   | 374 |

#### CHAPTER 13

|        |   |            |
|--------|---|------------|
|        | <b>Varieties of Factor Models in Relation to Scientific Models . . . . .</b>              | <b>377</b> |
| 13.1.  | Scientific Aims in Modifying the Factor Model . . . . .                                   | 377        |
| 13.2.  | Departures from Assumptions of Linearity and Additivity . .                               | 380        |
| 13.3.  | Adjustments to Mixtures of Populations . . . . .  | 384        |
| 13.4.  | Alpha and Image Methods of Analysis . . . . .   | 385        |
| 13.5.  | Canonical Correlation and the Factor Concept . . . . .                                    | 390        |
| 13.6.  | Canonical and Maximum Likelihood Factor Extraction, Ordinary and Proofing Forms . . . . . | 395        |
| 13.7.  | Other Developments and Comparison of Extraction Models .                                  | 401        |
| 13.8.  | The Aim of Real-Base Factor Analysis . . . . .  | 406        |
| 13.9.  | Covariance Factoring and the Law of Constancy of Factor Effect . . . . .                  | 407        |
| 13.10. | The Conception of Standard Raw Scores at a Core Matrix Position . . . . .                 | 410        |
| 13.11. | Relative Size, Potency, and Final Size of Factors . . . . .                               | 412        |
| 13.12. | The Role of Modulation in Determining Factor Size . . . . .                               | 414        |
| 13.13. | Broader Models: Nonmetric Analysis and Bentler's Multi-structure Model . . . . .          | 419        |
| 13.14. | Path Analytic Factor Analysis and the Quantifying of Causes .                             | 425        |
| 13.15. | Brief View of Factor Analysis in Relation to Regression and Other Models . . . . .        | 431        |
| 13.16. | Summary . . . . .   | 437        |

**CHAPTER 14**

**Distribution, Scaling, and Significance Problems . . . . . 441**

14.1. The Five Domains of Distribution and Sampling in Factor Analysis . . . . . 441

14.2. Taxonomic Principles in Recognizing Homostats and Segregates . . . . . 445

14.3. Within Type and Between Type Factor Dimensions . . . . . 448

14.4. "Multidimensional Scaling" or "Dimensional Integration" Concepts . . . . . 451

14.5. Equal Interval Scales and True-Zero Factor Scores . . . . . 453

14.6. The Theory of a True Zero . . . . . 458

14.7. Permissive, Staggered Onset, and Continuous Action Factor Models . . . . . 463

14.8. The Effects of Different Coefficients of Score Relationships Including "Cross Products" in the  $R_p$  Matrix . . . . . 467

14.9. The Statistical Significance of Correlation Matrices and Factors . . . . . 475

14.10. The Significance of Correlations and Loadings of Particular Variables on Particular Factors . . . . . 479

14.11. Error of Measurement . . . . . 485

14.12. Summary . . . . . 489

**CHAPTER 15**

**Conducting a Factor Analytic Research: Strategy and Tactics . . . . . 493**

15.1. The Choice of Experimental Design . . . . . 493

15.2. The Choice of Variables: Markers and Matching . . . . . 495

15.3. The Choice of Variables: Numbers, Matrix Divisions, and Combinations . . . . . 497

15.4. The Choice of Variables: Instrument Factors and Perturbation Theory . . . . . 502

15.5. The Choice of Number of Referees in Relation to Relatives . . . . . 508

15.6. Purposes in Manipulating the Selection of Referees . . . . . 510

15.7. Correlating Variables and Extracting the Unrotated Factors . . . . . 513

15.8. Rotating and Testing the Significance of a Rotational Resolution . . . . . 518

15.9. Matching and Interpreting Factors: Programmatic Design and the Need for a Universal Index . . . . . 523

15.10. The Use of Factor Scores and Taxonomic Type Classifications . . . . . 530

15.11. Summary . . . . . 533

|  |            |
|--|------------|
| <b>Appendixes</b> .....  | <b>539</b> |
| A.1. Proposed Standard Notation: Rationale and Outline .....   | 539        |
| A.2. An Indexing System for Psychological Factors .....  | 547        |
| A.3. Note on Utility of Confactor Resolutions with Oblique Factors .....   | 549        |
| A.4. Transformations among SUD, SSA, and IIA Strata Models:<br>Reversion from the Schmid-Leiman Matrix (IIA) ..... | 551        |
| A.5. A Practicable Minimum List of Computer Programs .....   | 554        |
| A.6. Tables for Statistical Significance of Simple Structure .....   | 554        |
| A.7. Tables for Significance of Congruence Coefficients in Factor<br>Matching .....                                | 568        |
| A.8. Tables for Significance of Salient Variable Similarity Index $s$ ..   | 569        |
| A.9. Recovery of $V_0$ and $R_v$ from a Given $V_{fp}$ and $L$ Matrix .....  | 571        |
