Introduction	xiii
1 Introduction to modelling	1
1.1 Numerical models	1
1.2 Symbolic models	2
1.3 The laws	2
1.4 Generalised models	6
1.5 Spatial models	8
1.6 Logical models	11
1.7 Statistical models	14
1.8 Algorithms and trial-and-error	16
1.9 Modelling in pseudo-code	17
1.10 Conclusion	21
2 Constructing models	23
2.1 The modelling process	23
2.2 The algorithmic model	29
2.3 A model of a game	31
2.4 The matrix model	33
2.5 A numerical model	35
2.6 A tree model	37
2.7 A table model	37
2.8 The model as a sequence	37
2.9 Conclusion	38
3 Sets and their applications	41
3.1 Defining a set	41
3.2 Relations between sets	44
3.3 More complex relations	47
3.4 Practical set models	48
3.5 Sets and domains	48
3.6 Solving problems	50
3.7 The domains in a probability space	52
3.8 Other logical relations	54
3.9 Mapping	55

3.10	Functions	55
3.11	Numeric functions	56
3.12	Conclusion	57
4	Number sets	61
4.1	Some number sets	61
4.2	Subsets of cardinal numbers	63
4.3	Fractional numbers	64
4.4	Real numbers	65
4.5	Rational numbers	66
4.6	Irrationals	67
4.7	Levels of precision	68
4.8	Square numbers	69
4.9	Conclusion	70
5	A first look at number systems	73
5.1	Some number systems	73
5.2	Other bases	76
5.3	Hexadecimal numbers	77
5.4	Converting from base to base	78
5.5	A system for all real numbers	81
5.6	A very different number system	82
5.7	Finite arithmetics	86
5.8	Conclusion	88
6	Mistakes and error	91
6.1	Mistakes	91
6.2	Error in general	94
6.3	Relative error	97
6.4	Error propagation	98
6.5	Rounding numbers	100
6.6	A rounding model	101
6.7	Significant figures	102
6.8	Truncation – a Procrustean bed!	103
6.9	Overflow error	103
6.10	Changes of number base	103
6.11	The control of error	105
6.12	Conclusion	106
7	Storing and manipulating numbers	109
7.1	Why should we worry?	109
7.2	Some preliminaries	110
7.3	Conventions	111
7.4	Less familiar arithmetic	113

7.5	Arithmetic in the computer	114
7.6	Binary coded decimal	114
7.7	More sophisticated codes	116
7.8	Capacity and register size	116
7.9	Multiplication	119
7.10	More powerful arithmetic	119
7.11	Floating point real numbers	121
7.12	Operations with F.P. reals	123
7.13	'Normalised' numbers	124
7.14	Induced error	124
7.15	Conclusion	124
8	Graphs, functions and inequalities	127
8.1	A new need	127
8.2	Pictograms	128
8.3	Distortion	129
8.4	Rules for graphs	130
8.5	Spreadsheet graphs	132
8.6	Proportional charts	132
8.7	Scales	135
8.8	Points and trends	138
8.9	Continuous functions	139
8.10	Graphs of functions	140
8.11	Some further rules	142
8.12	Graphs by computer	143
8.13	The area under a curve	144
8.14	Interpolation and extrapolation	144
8.15	Simultaneous functions	144
8.16	Error in graphs	146
8.17	Inequalities	147
8.18	Conclusion	149
9	Matrices and graphics	153
9.1	The new graphics	153
9.2	Vectors	154
9.3	Vectors and shapes	155
9.4	Notation	156
9.5	Combining vectors	156
9.6	The numerical model	157
9.7	Transformations	158
9.8	Reflections	162
9.9	Matrix multiplication	163
9.10	Rotations	165
9.11	Glide and stretch	167
9.12	Shear	167
9.13	Conclusion	168

10	Data structures	171
10.1	Organising data	171
10.2	Matrices again	172
10.3	An array example	173
10.4	Arrays and spreadsheets	177
10.5	Multi-dimensional arrays	178
10.6	String arrays	178
10.7	Array addresses	179
10.8	Lists	179
10.9	System lists	181
10.10	Stacks	182
10.11	Dequeues and wrap-arounds	183
10.12	Corruption by the machine	184
10.13	Ordering and searching	185
10.14	The binary chop	187
10.15	Trees	187
10.16	'Growing' a data tree	190
10.17	Tables	193
10.18	Back and trace pointers	195
10.19	Networks	197
10.20	Networks as arrays	199
10.21	Conclusion	201
11	Numerical and algebraic methods	205
11.1	The background	205
11.2	Language	206
11.3	Iteration	207
11.4	An iterative model	208
11.5	Limiting the iteration	210
11.6	Aberrations	211
11.7	Simultaneous equations	212
11.8	Expansions	214
11.9	Curved areas	214
11.10	Interpolation	216
11.11	Some algebraic methods	216
11.12	What the model means	217
11.13	Notation	219
11.14	Powers of numbers	220
11.15	Simplifying	222
11.16	Algebra and the machine	223
11.17	Changing forms	223
11.18	Substitution	224
11.19	The computer and simultaneous equations	226
11.20	Coefficients	227
11.21	Conclusion	227

12 Diminishing uncertainty – statistics	230
12.1 Why statistics?	231
12.2 The stages	232
12.3 Language	233
12.4 Sampling	233
12.5 Practical steps	234
12.6 A distribution	235
12.7 Displaying the data	237
12.8 Frequency polygons	238
12.9 Cumulative frequency	239
12.10 Quartiles	241
12.11 Dispersion or spread	242
12.12 Central tendency	243
12.13 Full descriptions	244
12.14 Standard deviation	247
12.15 Error	249
12.16 Trends	250
12.17 Scatter	253
12.18 Conclusion	255
13 Will it work? Probabilities	259
13.1 Probability modelling	259
13.2 Language	260
13.3 The probability scale	260
13.4 A simple model	260
13.5 Probability spaces	261
13.6 More detailed spaces	264
13.7 Standard scores	265
13.8 Multiple probabilities	267
13.9 Probability trees	270
13.10 Other experiments	271
13.11 Conclusion	272
14 Applied two-state logic and switching	275
14.1 Logic in programming	275
14.2 Logic and hardware	276
14.3 Language and symbols	276
14.4 Truth tables	278
14.5 Logical equivalence	280
14.6 Switching diagrams	282
14.7 Analysing circuits	287
14.8 The algebra of logic	288
14.9 De Morgan's laws	291
14.10 Karnaugh maps	293

xii *Contents*

14.11	Half adders	297
14.12	Conclusion	298
Answers to exercises		303
Index		343
