Preface	xiii
CHAPTER ONE Introduction	1
1.1 Basic Concepts and Definitions	1
1.2 Mathematical Problems	4
1.3 Linear Operators	5
1.4 Superposition	8
1.5 Exercises	9
CHAPTER TWO Mathematical Models	12
2.1 The Classical Equations	12
2.2 The Vibrating String	13
2.3 The Vibrating Membrane	15
2.4 Waves in an Elastic Medium	17
2.5 Conduction of Heat in Solids	21
2.6 The Gravitational Potential	23
2.7 Exercises	25
CHAPTER THREE Classification of Second-order Equations	30
3.1 Second-order Equations in Two Independent Variables	30
3.2 Canonical Forms	32
3.3 Equations with Constant Coefficients	38
3.4 General Solution	44
3.5 Summary and Further Simplification	46
3.6 Exercises	47

CHAPTER FOUR	The Cauchy Problem	50
4.1	The Cauchy Problem	50
4.2	Cauchy–Kowalewsky Theorem	53
4.3	Homogeneous Wave Equation	54
4.4	Initial-boundary Value Problems	65
4.5	Nonhomogeneous Boundary Conditions	68
4.6	Finite String with Fixed Ends	70
4.7	Nonhomogeneous Wave Equation	73
4.8	Riemann Method	76
4.9	Goursat Problem	83
4.10	Spherical Wave Equation	87
4.11	Cylindrical Wave Equation	89
4.12	Exercises	92
CHAPTER FIVE	Fourier Series and Integrals	99
5.1	Piecewise Continuous Functions and Periodic Functions	99
5.2	Orthogonality	101
5.3	Fourier Series	102
5.4	Convergence in the Mean	105
5.5	Example of Fourier Series	106
5.6	Cosine and Sine Series	110
5.7	Complex Fourier Series	114
5.8	Change of Interval	116
5.9	Pointwise Convergence and the Riemann–Lebesgue Lamma	119
5.10	Uniform Convergence, Differentiation and Integration	122
5.11	Double Fourier Series	125
5.12	Fourier Integrals	128
5.13	Exercises	133
CHAPTER SIX	Method of Separation of Variables	137
6.1	Separation of Variables	137
6.2	The Vibrating String Problem	140
6.3	Existence and Uniqueness of Solution of the Vibrating String Problem	145
6.4	The Heat Conduction Problem	151
6.5	Existence and Uniqueness of Solution of the Heat Conduction Problem	154
6.6	The Laplace and Beam Equations	157
6.7	Nonhomogeneous Problems	161
6.8	Exercises	168

CHAPTER SEVEN	Eigenvalue Problems and Special Functions	176
7.1	Sturm–Liouville Systems	176
7.2	Eigenvalues and Eigenfunctions	179
7.3	Eigenfunction Expansions	185
7.4	Convergence in the Mean	187
7.5	Completeness and Parseval’s Equality	188
7.6	Bessel’s Equation and Bessel’s Function	191
7.7	Adjoint Forms: Lagrange Identity	197
7.8	Singular Sturm–Liouville Systems	199
7.9	Legendre’s Equation and Legendre’s Function	204
7.10	Boundary Value Problems Involving Ordinary Differential Equations	210
7.11	Green’s Function	212
7.12	Construction of Green’s Function	217
7.13	Schrödinger Equation for the Linear Harmonic Oscillator	220
7.14	Exercises	223
CHAPTER EIGHT	Boundary-Value Problems	229
8.1	Boundary-Value Problems	229
8.2	Maximum and Minimum Principles	231
8.3	Uniqueness and Continuity Theorems	233
8.4	Dirichlet Problem for a Circle	234
8.5	Dirichlet Problem for a Circular Annulus	239
8.6	Neumann Problem for a Circle	241
8.7	Dirichlet Problem for a Rectangle	242
8.8	Dirichlet Problem Involving Poisson Equation	246
8.9	Neumann Problem for a Rectangle	248
8.10	Exercises	251
CHAPTER NINE	Higher Dimensional Boundary-Value Problems	258
9.1	Dirichlet Problem for a Cube	258
9.2	Dirichlet Problem for a Cylinder	260
9.3	Dirichlet Problem for a Sphere	263
9.4	Wave and Heat Equations	268
9.5	Vibrating Membrane	269
9.6	Heat Flow in a Rectangular Plate	270
9.7	Waves in Three Dimensions	272
9.8	Heat Conduction in a Rectangular Volume	274
9.9	The Three-Dimensional Schrödinger Equation in a Central Field of Force and the Hydrogen Atom	275
9.10	Method of Eigenfunctions	281
9.11	Forced Vibration of Membrane	282

9.12	Time-Dependent Boundary Conditions	284
9.13	Exercises	287
CHAPTER TEN	Green's Function	293
10.1	The Delta Function	293
10.2	Green's Function	296
10.3	Method of Green's Function	296
10.4	Dirichlet Problem for the Laplace Operator	298
10.5	Dirichlet Problem for the Helmholtz Operator	301
10.6	Method of Images	302
10.7	Method of Eigenfunctions	306
10.8	Higher Dimensional Problems	308
10.9	Neumann Problem	314
10.10	Exercises	314
CHAPTER ELEVEN	Integral Transforms with Applications	318
11.1	Fourier Transforms	318
11.2	Properties of Fourier Transforms	321
11.3	Convolution Theorem of the Fourier Transform	325
11.4	The Fourier Transforms of Step and Impulse Functions	329
11.5	Fourier Sine and Cosine Transforms	332
11.6	Asymptotic Approximation of Integrals by the Kelvin Stationary Phase Method	335
11.7	Laplace Transforms	337
11.8	Properties of Laplace Transforms	339
11.9	Convolution Theorem of the Laplace Transform	343
11.10	The Laplace Transform of Step and Impulse Functions	346
11.11	Hankel Transforms	356
11.12	Operational Properties of Hankel Transforms and Applications	358
11.13	The Mellin Transform and its Operational Properties	362
11.14	Finite Fourier Transforms and Applications	366
11.15	Finite Hankel Transforms and Applications	371
11.16	Exercises	376
CHAPTER TWELVE	Nonlinear Partial Differential Equations with Applications	389
12.1	Introduction	389
12.2	One-dimensional Nonlinear Wave Equation and Method of Characteristics	390

12.3	Linear Dispersive Waves	394
12.4	Nonlinear Dispersive Waves and Whitham's Equations	398
12.5	Nonlinear Instability	401
12.6	Traffic Flow Model	403
12.7	Flood Waves in Rivers	405
12.8	Riemann's Simple Waves of Finite Amplitude	406
12.9	Discontinuous Solutions and Shock Waves	414
12.10	Shock-Wave Structure and Burgers' Equations	419
12.11	The Korteweg-de Vries Equation and Solitons	427
12.12	The Nonlinear Schrödinger Equations, Solitary Waves and Instability of Water Waves	434
12.13	Exercises	442
CHAPTER THIRTEEN Numerical and Approximation Methods		447
13.1	Introduction	447
13.2	Finite Difference Approximations, Errors, Consistency, Convergence and Stability	448
13.3	Lax–Wendroff Explicit Method	451
13.4	Explicit Finite Difference Methods	453
13.5	Implicit Finite Difference Methods	469
13.6	Variational Methods and the Euler-Lagrange Equations	474
13.7	The Rayleigh–Ritz Approximate Method	491
13.8	The Galerkin Approximation Method	499
13.9	The Kantorovich Method	503
13.10	Exercises	506
ANSWERS TO EXERCISES		516
APPENDIX		535
	I Gamma Function	535
	II Table of Fourier Transforms	536
	III Table of Laplace Transforms	538
	IV Table of Hankel Transforms	540
BIBLIOGRAPHY		542
INDEX		549
